>
>Show us proof of any properly designed circuit using all three grids tied
>to ground...

I did. The Swan 1200-X. Of course you might not consider that a
"properly designed circuit", but then you still haven't explained just

what a "properly designed circuit" really is, or even what a "classic" sweep tube circuit is. Care to elaborate? (If you are just going to squirm around the question, don't bother.)

> Show us any RF amplifier circuit with any grid tied to the
>plate (as you said they can be), not audio... rf amplifier.

>Didn't we just see you dance and sing about an amplifier..?
>I believe you used the Swan 1200x as an example in your Wed Oct 23 post.
>"Just take a look at the schematic of the 1200-X, the screen and
>suppressor are tied to the plate, just like I said."
>
>Well you are wrong buck'o

Yes I am, and despite your immediate response to another one of my mistakes you STILL haven't come close to proving your original statements! Now why do you jump on my errors so quickly, but can't seem to provide any PROOF of your statements, proof that you say is so very easy to find?

Regardless, yes, the screen and suppressor are tied to ground. But that doesn't detract from the fact that the tubes are still run in a triode configuration -- there are still only three effective elements.

>Your boat is sinking fast boy... your theory is bad news and your
>references don't support your statements.

Tell ya what, Skippy. Unless you have been totally absent from the newsgroup for the past couple years, you should already know that I'm a broadcast engineer: I work on shit you only dream about! So if you want to challenge my RF theory, fine. My education AND experience also includes commercial radio, the stuff for which you have several licenses, and if you wan't to bounce that ball back and forth a few times we can do that, too. But I'll tell you one thing of which you can be ABSOLUTELY SURE: Broadcast transmitters don't use sweep tubes! And they don't use pentodes configured as triodes, either! If I don't know much about how to kludge a sweep tube as a grounded-grid triode it's because I was trained how to do things RIGHT! And I can tell you one more thing: Despite my lack of experience in designing sweep tube amps, many times I have put those junk-boxes on the bench, and I have seen very few that didn't make the spectrum analyzer look like a bad acid trip. The fact of the matter is that sweep tubes were cheap substitutes for properly designed RF power tubes. You can dance and squirm around that statement all you want, but you can't change that basic fact!

Your next question you are probably going to ask me is why do I care? Because it's people like you that push the hype that sweep tubes are cool when they are not -- they just add noise to the Citizen's Band. And as a holder of several FCC licenses I'm sure that is something you already know.

It really amazes me how you can sit there and shit on the hand that
feeds you.

>:>: 5. What does "low-mu" describe?
>:>

>
>Any amplifier designer uses all the above when considering circuits. If
>you want details, you have to be more specific... your question is very
>non specific... should anyone care to answer it, they would need you to
>narrow it down. Moving on...

Alright, let's narrow it down even further:

1. The prefix 'tri-' denotes a number. What is that number?
2. A 'triode' has how many elements?
3. A triode-connected pentode has how many effective elements?
4. Is the EpIp curve of a triod-connected pentode not like a triode?
5. Does a grounded-grid circuit somehow magically transform a triode
into anything else, such as a diode, pentode, tetrode, "low-mu" sweep
tube, tuning-eye tube, CRT, X-ray tube, or klystron?

And just to make it easy for you, here are the answers:

1. 3
2. 3
3. 3
4. No
5. No

Now take the test yourself and then we'll check your score.

>So, if and when you get an answer, where are you going with it the topic?
>What point are you trying to make that directly applies to the
>original topic..?
>
> **********
>

>: E. None of the above
>
> **********

>
>
>"specifications of vacuum tubes", "type/class of tube", "type of tube
>operation", "circuit layout" are all related to the Low mu label.

Of course they are, whenever the tube is a triode! The triode can even work as medium-mu and high-mu! Good grief, Skippy, how long do you think you can keep up this facade?

> You
>wanted a question answered when each sub topic of the above list can take
>pages. I call you on that fact, another indicator that your working
>knowledge is seriously lacking. I'm just about done answering your dumb
>questions... There are hundreds of google web page hits on the directly
>related topics of "low mu".

Jeez, even MORE bullshit! Don't you ever quit, Skippy? Look up "mu" in your handy-dandy electronics reference and what does it say? Probably the same as mine: "1. Symbol for amplification factor". Then look up "Amplification factor" and it says, "1. In a vacuum tube, the ratio of a small change in plate voltage to a small change in grid voltage required to produce the same change in plate current (all other electrode voltages and currents being held constant)." And you know why triodes are rated with mu but tetrodes and pentodes are rated by transconductance? Because the screen grid can affect the amplification of the tube. Now if the screen grid is not being used because it's either grounded or tied to the plate then the tube is working as a triode. You see, it really doesn't matter where the screen is tied, it's still working as a triode. And that's why when a tetrode or pentode is configured as a triode it is rated by it's mu, because it's working as a triode!

So how many times do I have to repeat this before you quit dancing around the facts? If it looks like a duck, swims like a duck, quacks like a duck... get it?

>:>: 6. What is the definition of a 'sweep tube'?

>
>: That's two correct! You're on a roll...
>
>Your count is off, your label was incomplete and you have yet to show
>where your going with all this.

What's incomplete about 'mu'? It means 'amplification.... aw, the hell
with it, you are just going to side-step it every time I say it. The
term "mu" is a term that has been well defined for almost a century.
Taking the term 'low-mu' and putting some extra meaning behind it as
if it's some sort of magical sweep-tube circuit, well that's just
plain deceptive, and it's the kind of thing that helps shovel around
all this RF mythology.

>:>: 8. How does the linearity of a sweep tube compare to that of an RF

>have'em boy. What I wrote above is fact and stands on its own until you
>can provide clear evidence it does not.

What fact? That the 6146 was used in televisions? What make and model?
Oh, that's right, you told me that I should look it up myself. Or your
other fact that amps are legal on services between 24 and 35 MHz? What
make and model? What service? Oh, that's right, you told me that I
should look it up myself. But when I made a mistake you sure jumped
like a live fish...!!!

>Linearity is not always desired for tubes in RF service... as in
>non-linear modes.

Yeah? So? If you want to run a sweep tube at Class C, be my guest!
Just remember to use safety goggles! LOL!!!

> But sweep tubes do the job well enough to meet and
>exceed FCC Spectral Requirements. Doesn't matter if your flying a 707 or
>a 747, you still get there.

Drop the veil, Skippy. You and I both know that these amps are not
intended to be used under the watchful eye of the FCC! And for that
fact, you can make just about anything meet FCC specs, if by doing
nothing more than turning it off. But running at reduced power is one
way that some devices get through the testing phase. A lot of
equipment that's type-accepted and/or certificated doesn't even get
tested: If it did, a lot of it would certainly fail! So don't hide
under the blanket that a couple radios got their tag because that's a
mighty small blanket!

>: Oh yeah, the word is 'moot', not 'mute'. Your voice recognition chip
>: might be overheating...
>
>Nope, it's mute just as I wrote it...

I read it wrong, but neither word really works there.

>:>: 9. Why were sweep tube amps so popular, aside from the price and

There you go with that term "classic" again. Just what is a "classic"
sweep tube amp, and what is NOT a "classic" sweep tube amp?

>: mean production amps, many homebrewers had problems with the sweep
>: tube amps.
>
>Many people still don't understand how to properly build them into rf
>amplifiers. Companies like Palomar got it right in the six tube Palomar
>300 circuit. I like to reference portions of it as an exampled of a
>nicely thought out circuit.

So is that a "classic" sweep tube amp? What about the Swan radios? Do
they use a "classic" sweep tube amp circuit?

>: I remember my Uncle tried one once and he kept blowing tube
>: after tube until he finally added enough neutralization to keep it
>: from oscillating into smoke. He wasn't the only one, either.

>
>No sweep tube amplifier I have requires neutralization. It's not required
>in a properly designed AB2 amplifier.

By "properly designed" do you mean grounded-grid or common-cathode?
Because you most DEFINATELY need neutralization in a common-cathode RF
amplifier, whether it's A, AB1, AB2, B, BC or C. Now do all sweep tube
amps use the grounded-grid configuration? Or is that just reserved for
the "classic" sweep tube circuits?

>: Homebrewers also had, and still have the problem of grid current,
>: which is an absolute no-no with sweep tubes. RF tubes are more
>: forgiving in that situation, and with a tuned grid you wouldn't even
>: notice it. But with sweep tubes not even a tuned grid with a swamping
>: resistor is going to make the crossover much smoother.
>
>Most homebrewers / hams do not have a handle on grid current in SWEEP TUBE
>AMPLIFIERS. Well, here's where you really lose it. If one does the
>proper homework, you can research previous posts made by me to the amps
>group which explain a proper circuit approach to ensure grid current is
>within limits. I don't need to lay it out a second or third time.

Woudn't it be much easier to get a real RF triode and just stay within
the manufacturers specifications? Naw, of course not... Gotta have dat
sweep-toob amp a'glowin!

>In a proper circuit, I don't have to have any measure of forgiveness in a
>tube. I understand how it works as applied and can keep the grid within
>allowed operational values. It's not rocket science, but it's not clearly
>understood by a lot of people and clearly not by you.

If you are again referring to grounded-grid, I know more about it than
you might think. For instance, I know that grid current flows while
the cathode is pushed negative by the drive, which is for half of the
cycle if the grid is truly grounded (quite a scary situation for a
sweep tube!). I also know that there is a theory where you can get
better gain from a grounded-grid tetrode or pentode if you reduce the
grid voltage relative to the screen. This might also save the grid in
a sweep tube. However, that theory is faulty because both the grid and
the screen are still AC grounded, and there is no grid-to-screen
amplification without a signal between the grid and screen. The only
thing that is accomplished by lowering the control grid voltage on a
grounded-grid triode-operated sweep tube amp is saving the grid at the
expense of saturation clipping on the negative peaks. IOW, "swang".
And, of course, harmonic distortion. Is this the basis of your
"low-mu" theory? or your "classic" sweep tube circuit? or both?

>: No, they are NOT easier to construct. The only exception might be if
>: the tubes were run grounded-grid, in which case you have to solder
>: three pins instead of one (for a factory triode), which is not a
>: significant effort.
>

>You are wrong... and clearly haven't built any modest number of
>amplifiers, else you would know your blowing a lot of poop.

I don't need to fall off a building to know that I will go 'splat' at
the bottom. Do you?

>:>: 10. How many sweep tube amplifiers are being produced these days?

>using any tube.

LOL!

> You like to tie the grids to the anode/plate... you
>don't understand AB1 and AB2 layout considerations related to rf amps and
>you don't prove that you've worked on very many of said.

...many of said what? Amplifiers? No, I don't make illegal amps. I'm
not a big fan of grounded-grid operation, either. But maybe you should
take a tour of a broadcast transmitter sometime and see how it's
REALLY done.

>:>gotta go... it's music night..! yee ha..!
>:>
>:>skipp
>:>
>:>ps: try not to be too bitter in your follow up post
>
>: Who's bitter? You got three correct answers (maybe four, I'll give you
>: the IB service question), and one that you can do over again. That's
>: more than I expected. Actually, I thought you would try and obfuscate
>: every single question. But I was only half wrong...
>
>You are more than half wrong... The IB Radio Service is current as
>Industrial Business. But of course you work for the industry so you knew
>that.

Then why don't you have an IB license, Skippy? You have them for IG,
IK, YG, ZA and even HA (amateur), but you don't have one for IB. So
where did you find your information that IB is even listed in the
radio services? Any link will do. And how about a link to proof that
these services can use amps between 24 and 35 MHz? Or a link to a
legal amp for those freqs? And a link to a TV that uses a 6146? Don't
post one unless you can post them all, Skippy!

>If you can stay on topic, keep your ramblings under control... it would be
>fun to go into detail about specific technical issues related to rf or
>audio amps. I enjoy the subject and am willing to debate or go over issues
>with any person willing to be civil.
>
>Now, watch for my questions for you...

Go for it.

Hi,
Galaxy Saturn Turbo has the same main board as RCI2950, but ... with
deleted one of final transistors (2SC2312). The big power unit in
this rig (added after the final transistor) is of a very low
quality. The power supply DC unit inside this large case is also not
the very best. A well tuned up RCI2950 will give to you MUCH MORE
satisfaction, beeing also much more comfortable (little size case).
I'm using a RCI2950 since 1990 and I'm very satisfied. Many times i
had a sick "Turbos" on my table, my friends' properties. My advice
is : be a owner of 2950 as long, as you can and never buy a "Turbo".
Best regards,
Chris,
Poland

I know I wouldn't. Since my license is listed as the trustee of the
repeater, I have a vested interest in making sure things are kept legal.
If I do not take those steps, I am ultimately responsible in the eyes of
the FCC.

Unfortunately, the head of steam that may get the enforcement ball
rolling in this area may become the victim of bad timing. By the time
they get solid legislation in place, the sunspot cycle will have
retreated to the point that only local and regional traffic will be
heard. Once the bands become more quiet, the truckers may move back down
into the "freeband" area. Many hams, who only use 10 meters when the DX
is hot, will move back to other bands, and the problem will only be
witnessed by those with an axe to grind. From the FCC's perspective, the
whole problem may be downgraded to a non-issue once again.

That's true, but that's not the way it turned out. If CB hadn't
"evolved" into a pseudo-ham radio hobby, it would have died 15 or more
years ago. Both cell phones and FRS radios, make better short range
person-person communications devices.

I don't think CB has been marketed as a reliable two way communications tool, since the "convoy" days. It was a social fad in the 70's and a rag chew/DX hobby ever since.

I don't view CB as simply "2-way communications", since that is not what the majority of CB users, use it for, beyond the purely technical definition.

Yes it does. You see, I was once a disenfranchised, self-centered, indifferent youth with a lack of respect for society. But as I get older, I start to change the way I view the world and the small part that we each play in it.

I ran all sorts of illegal radio equipment. Experimenting with it taught me a great deal about electronics, and helped me to decide my career path.

I personally don't have a problem with people who "play" with CB and freeband, as long as they keep a reasonably clean signal, and stay off of bands authorized for other services.

But I do understand the rule of law, and I've argued on that side since it is the rule. But like I tried to explain to twisty (Who doesn't seem to understand concepts, analogies, and even simple comparisons), there's a difference between the letter of the law, and how I feel personally about it.

"Voices! I hear Voices!!!" AHHHHHHHHHHH!!!!!

It's funny just how many people didn't understand the concept of radio
waves, ans still feel that a cordless phone was "private".

It wasn't practical. I could bring up a half dozen phones
simultaneously, so I never knew which one was actually doing the
calling. Many of those old 1.7 Mhz phones didn't have a lot of return
range on 1.7, and I used to "dial blind" and still ring my phone even
though I could not even hear the return. I never knew exactly how far I
was reaching. It was over a mile, for sure.

I believe cordless phones were not specifically included in the ECPA,
which is why we can still get scanners that cover there. The ECPA was
nothing more than appeasement legislation, for the benefit of the cell
phone companies to allay the fear of citizens over privacy. At the time
the technology was not there to effectively encrypt the signal, so the
attempted to legislate away the threat. Today this is no longer the
case.

But you are right, it is illegal to tape record a conversation or reveal
information obtained as a result of such reception. It's a violation of
the wiretap law. I had this discussion with a LEO buddy of mine, some
time ago, who maintains that even CB conversations cannot legally be
taped. I still don't believe that but, there's already a case for
cordless phones, when a few years ago someone taped a conversation
involving Newt Gingrich, and was prosecuted for the violation of the
wiretap law.

The range pretty much sucks for a serious replacement of CB for highway use. But many family and groups use them to caravan. Just don't get left behind by more than a few miles.

In this day and age, of terrorists and the scandal in the Catholic church, many people are suspicious of "others" not in their group. As a kid, I remember being invited over to see another CBer or ham's station. Back then it was considered "mentoring". About a year ago, I was on FRS, and some intelligent sounding kids were experimenting with their radios. I broke in to offer some information, and it was not long before an irate father grabbed the radio and gave me a verbal tongue lashing and pretty much accused me of being some sort of child predator, and how dare I cut in on "their" channel?

Times have changed for sure.....

You're civil, I'm civil.

I have been thinking seriously about doing something similar. I have been in several near miss accidents at the hands of people who are more engrossed in their cell phone conversations then they are in paying attention to where they are driving. I am constantly amazed how a society, that a scant 10 or 15 years ago, had no problem waiting until they were home to yak it up with their friends, who now suddenly feel that they have to dial up the second they hit the streets. I still have no justifiable need for a cell phone. My wife has one because it's actually cheaper to use the cell phone to call relatives and friends outside of our local call area, then to use the home phone. My combined monthly bill is now cheaper than before I had the cell.

I have an old analog cell phone. I was thinking about running a sawtooth ramp wave into the VCO, and having it sweep the entire cell phone band, and then carry it with me when I drive. If all the cell phones within a mile of me, stop working, I'm sure they'll (eventually, once they give up on the phone) concentrate more on their driving.

Robert Swift, the driver who called in the sniper suspects car, is has been told to me didn't have a cell and used an auto patch on 2 M to make the call. Neat huh, well here comes the rest of the story. While the police were interviewing him what did they happen to see in his truck? A 600 watt Linear amp attached to a CB. Well They were nice enough only to take it from him and levy a small fine. I guess the local police can do that now.... All in all I know that it is illegal to run a linear on 11 merers , but when the goverment says that illegal aliens can be forgiven if they helped in the capture , why can't we forgive a truck driver who just saved a LOT of people a lot of fears? Seems all jacked up to me...

A. Tape recordings, observations of truckers and other such
vigilante nonsense by hams have absolutely no legal basis in law
and would be tossed out of a court of law in a heartbeat, IF they
ever got that far.

B. You may perceve ten meter use by trucker as a problem of
national concern, but have you heard there's a worldwide
terrorist war going on? Get a reality check! And the FCC
does NOT regard YOUR ten meter problem as on of their
priorities. In fact, YOUR ten meter problem is not even on
their radar screen. What scarse enforcement resources the
commission has are being used for high-priority, as they see it,
national problems, none of which include YOUR ten meter
problems with trucks. Again, get a reality check!

C. Try a new experience. Turn off all your ham radios and spend
some time with your wife, kids, grandkids, family, etc. And
stop bitching about no code techs. I heard you bitching about them
with your buddies on two meters last night. Some of those no
code techs make six times the money you make!

> was modified.

"Getting out" is a relative term. Maybe the reason you hear him so well,
is because he's running a little extra power?

I'd be willing to bet, based on past experience, that if this "CC"
person were to magically replace his super scanner with a 3 element
beam, you'd hear him even better, provided, of course, it was pointed at
you.

The super scanner was designed to be both an omni and a beam for people
who can't install both. As a beam it does slightly better than a good
omni, but worse than a dedicated beam, and the front-back rejection is
much worse. As an omni, it's worse than a 1/2 wave GP.

If the reason you want a super scanner is so that you can be a powerful
as "CC", you might want to first ask him what other goodies make him
sound so strong, because I can assure you that the antenna is not it.

You might want to get a hold of Jay in the Mojave. He refurbishes
Penetrator antennas. Those were a great omni antenna. You won't find too
many that are better. Unless you want a beam.

Maybe where you come from, laddy.
Down here that sorta stuff is reserved for times when you're alone with a female.....

<g> Hey, eavesdropping on certain conversations has been held an electronic form of spying which is one reason why we can't legally receive the cell band on scanners in the US of A..

>Legal, shmeagle---as long as it's FUN!<

Nah! Can't agree with ya' there.
Too many folks are incompetent on word definitions today....using outdated, grammar school dictionaries.
Besides, you' ain't nuthin' but another pime exampe of a disgrace to hammie radio. Never imagined my mere words had the power of all-consuming control over you dweebettes.....hahhahhahahahahhahhaha!

>I have "Liberty Valance
>syndrome". >:-)

Oh, you have a syndrome alright.

It ain't the conscience, it's the wisdom that youth runs from.

>Ehh, I could show you plenty of old stupid >people.

Look in the mirror. You're preaching to the choir. You are...discontent, even.

Funny as hell that many of them feel
their conversations are somehow private.

>They think this "privacy" is somehow sacred.<

It's called a reasonable belief and until the courts rule otherwise, feel free to petition the law at anytime to change it. If you need instruction on how to begin what would be construed as such a broad undertaking by you, we understand and do not hold it against you. Email me and we can discuss a consult fee.

>Moses didn't say nuthin' about it.
>Guy

Just cause you knew him personally carries no weight. Better ask the atheist down under his views concerning such a statement.

It isn't "there" until the antenna plugs in to the ADC chip's input pin.
That's the goal of the guys doing the work if you even bothered to read
what is going on. I'm not just talking about the links quoted, but in
the various RF Design, and Communications trade publications.
--
Uh-huh,,,I see....and what makes your choice of literature any better
than the electronics magazines others read? You know what I'm talking
about,,,,,where you accused the publisher of having no journalistic
integrity for mentioning a keydown? Hahhahahahah! You just entered the
"Hypocrite Hall", collectively manned, at this point in time, by 3 very
angry nocodes and a bitter socialilst upperclassman. Go upgrade, Lelnad.

2906. Re: 10 meter intruders - Another solution to the problem?

Newsgroup: rec.radio.cb

Source record: 141742

Well Jerry I went to a coffee break with some fellow radio hobbyists tonight. So on the way there I tuned in to 28.085 MHz and yup they were there all right, not loud but definitely there. Later, by a few hours, after the coffee break I again monitored 28.085 MHz, and they were still there. A different group this time, and louder. So I have to agree there're there for those who really want to take the time out to do the monitoring. And just for the record I was driving I-75 south to I-696 west, south on Southfield road to the south bound Southfield freeway, and finally to west bound I-96. I heard the bozos the whole way there at around 5 to 6 PM, and about half way back home around 9 PM. I had an idea of another way to attack the problem Jerry. Instead of going after the so-called export-radio, or the truck drivers directly, let the Department of Transportation do the work. Since many of the 10m intruders seem to be truck drivers just have the Department of Transportation mandate that commercial trucks can ONLY have company provided GMRS UHF 2-way radios. They regulate just about everything else on the truck already so the radio is just one more minor item. The 11m antennas are hard to hide, and those small enough don't work worth beans. Thus it would easy to spot the illegal equipment during inspections at weigh stations and when ever a cop pulls a rig over for a safety or traffic violation. The fines would be directed to the owners of the over-the-road rigs. Once the owners get stuck paying a big fine, and possibility firing the driver, or taking other corrective action, the word will get out real quick. No unauthorized radios, period. Once the truck drivers find that many of their fellow drivers are moving to GMRS radios they will not complain much about using it themselves. The point is the drivers mainly talk to each other, thus when you can move a significant number of them off of 11/10m the rest will naturally follow just so that they can still stay in contact. A 25 watt GMRS UHF radio will work just fine with keeping in contact with fellow drivers for 5 to 10 miles up and down the highway. There is no need for the drivers to know where the local police are unless they have equipment safety violations, are overloaded, or just plain speeding. In any case if they get stopped and fined, so be it, particularly for speeding. I'm sure many of you have been passed by a big rig doing 70+ in a zone clearly marked "Trucks 55". The main use the drivers need the radio for is safety, notification of road hazards, to keep each other amused while driving long hours, and to contact the dispatcher. If the drivers don't have the discipline to use FM correctly, they sure didn't learn how to use AM either judging by all the music playing I hear on 19 all the time, them perhaps we can get rid of the radios all together, then let the drivers use cell phones instead for critical messages.
Once the truck drivers are off 11/10m the demand for the so-called export radio will drop way off, thus the job of blocking their

importation will be easier. Also the word will get out to the rest of the pirates that 10m intrusions are being dealt with seriously will further discourage others from using the rigs further reducing the demand. Making an example out of the truckers is easy because they are always exposed to inspections at any time any where, i.e they can't hide at least not for long.

Saw this on a Tee-shirt:
"I am a
 bomb
 technician
if you see me
running
  try to keep up "

Try putting that idea to a DOT man.
After getting laughed at for being pompous, you can start looking for budgets to slash from to pay for the extra men your asinine proposition would mandate for you, as usual, neglect the most obvious......money. DOT may be state run, but receive a great deal of their monies from the feds. The feds track record is well known on cb enforcement. A large cash influx isn;t on the way and that's the only way it could happen. Hey, don't take my word for it, I'm just a lowly freebander that enjoys some Dx. Ask JerryO to ask Riley about this. Will you take his word, or has that self-righteous thing blinded you to not only those that don;t agree with you, but those that remain neutral or refuse to take sides at all? Never mind, we know your side, and then we know the truth.

From: nojunk_n3cvj@worldlynx.net (Dave Hall)
Yes it does. You see, I was once a disenfranchised, self-centered, indifferent youth with a lack of respect for society. But as I get older, I start to change the way I view the world and the small part that we each play in it.
I ran all sorts of illegal radio equipment. Experimenting with it taught me a great deal about electronics, and helped me to decide my career path.
I personally don't have a problem with people who "play" with CB and freeband, as long as they keep a reasonably clean signal, and stay off of bands authorized for other services.
But I do understand the rule of law, and I've argued on that side since it is the rule. But like I tried to explain to twisty (Who doesn't seem to understand concepts, analogies, and even simple comparisons), there's a difference between the letter of the law, and how I feel personally about it.
Dave
"Sandbagger"
==========
Hi Dave. Still espousing the philosophy that if someone else doesn't view something the way you do, the other person must suffer from deficits. I am certain you didn't get that from your "How to Win Friends and Influence Them" guide for practicing socialists, but your post was timely, as it gives me a perfect example to point out of what I illustrated yesterday concerning those hammies who are secure in their ignorance and false sense of security. Since I have pointed out your misbehavior you have indeed reviewed your archive collection and the fact that you were repulsed enough by what you saw made you admit your character flaws ..... that is a good thing, a first step. Your words are there for all to enjoy, whenever they wish. You now to the side-step and and expect us to disregard your own words and believe the spin you are telling us now that you have grown up since then. I give everyone the benefit of doubt at first...you are no longer worthy of such delights. You must unprove yourself..a reputation is much harder to repair than destroy, but you can't say you weren't warned.

>

As I stated previously, everything is being done anonymously.
If the user stays within legal band edges, including mars/cap
frequencies, the programming on the eprom, which by the way
has been cleverly shielded from stray RF from what the designers
have told me, will never know it's even installed. A fail-safe design
insures that upon power-up, an internal self-diagnostics program
runs to insure that the unit is operating within design parameters.

Is this legal? Is using a RF amplifier on 11 meters legal? Of course not.
If such a device caused damage to your equipment, you could collect for
damages in civil court providing you could prove how the damage occurred
and could identify the party who sold you the amplifier. You would also have
to show the court that the selling party knew it was installed and that
he or she had criminal intentions to defraud or cause physical damage to
your equipment. Bottom line, no attorney worth his salt would take this case
and you'd be laughed out of small claims court just trying to explain the
" star wars " device hidden somewhere in your amplifier.

In this day and age, of terrorists and the scandal in the Catholic church, many people are suspicious of "others" not in their group. As a kid, I remember being invited over to see another CBer or ham's station. Back then it was considered "mentoring". About a year ago, I was on FRS, and some intelligent sounding kids were experimenting with their radios. I broke in to offer some information, and it was not long before an irate father grabbed the radio and gave me a verbal tongue lashing and pretty much accused me of being some sort of child predator, and how dare I cut in on "their" channel?
Times have changed for sure.....
You're civil, I'm civil.
Dave
"Sandbagger"

Dude, I have always been civil to everyone until provoked and initiated by another.....you wanna bury the hatchet, I would like nothing better. You tell me (or email me) what you want from me and in return, all I ask , is you stay pertinent, non-insultive, and non-personal in our crossings.. .....

Not saying your wrong of course but CC doesn't have a problem with his,maybe it was modified.

>>"Getting out" is a relative term. Maybe the reason you hear him so well, is because he's running a little extra power?
I'd be willing to bet, based on past experience, that if this "CC" person were to magically replace his super scanner with a 3 element beam, you'd hear him even better, provided, of course, it was pointed at you.
The super scanner was designed to be both an omni and a beam for people who can't install both. As a beam it does slightly better than a good omni, but worse than a dedicated beam, and the front-back rejection is much worse. As an omni, it's worse than a 1/2 wave GP.
If the reason you want a super scanner is so that you can be a powerful as "CC", you might want to first ask him what other goodies make him sound so strong, because I can assure you that the antenna is not it.
You might want to get a hold of Jay in the Mojave. He refurbishes Penetrator antennas. Those were a great omni antenna. You won't find too many that are better. Unless you want a beam.

> So this crap about it isn't a problem is just that, crap.

If it's as bad as you say where you're at, yes it's a
problem, but to paint the entire country with a brush
that's so wide, nonsense. I was listening for about
4 to 5 hours last week going up Highway 5. Scanning

between the high and the low of 28.085, 2 times I heard probable non licensee's. On the way home, during the evening and night, I heard maybe 3 or 4 probable non licensee's, so where's the dozens I'm supposed to hear?

(General Johnson Jameson)
"Paul Vanasse" wrote in message
Im not laughing at you General, Im laughing at this supposed
modification that would cost more money than the amp itself. It would be
cheaper to have an amp buyback program.
--

The donations for this project came from a group of very wealthy hams
whom for obvious reasons wish to remain anonymous.
They have personally invested many thousands of dollars into their "
hobby " and unlike the FCC are attempting to cure a problem that has
become malignant and affects everybody. Poorly designed, tuned and
improperly used high-power amplifiers cause havoc to government,
aviation, hospital and industrial equipment.
Ask any pilot about spurious signals they have heard on their airplane
transceivers. Harmonic signals so loud they cover up tower and plane to
plane communications, making it impossible to communicate. Imagine
trying to determine where the plane is in front of you when a cb'er
running a few kilowatts decides to keyup and practice his whistling.
But hey, I'm just an old man with phony name and email address. I'm full
of crap and so are my posts. After all, it's just entertainment right?
hugs and kisses
General Johnson Jameson
--

Yup, that's what one would have to do...IMAGINE. We can do better than
that, we can take it to an aviation forum and ask any pilot you want
about these harmonics.....they do occur...only not from cb to
avaition freqs....this argument was fought in the past and I was witness
to it, but I'll be content to follow you to a usenet fly-board and watch
you go at it.
You mentioned rich hammies,,,I have to ask...did you meet them on the
bowl?

In Texas I heard truckers all the time, now I am 700 miles
northwest and I still hear truckers all over the band. When in
Texas I seldom heard truckers in Texas, mostly in the midwest and
east coast. Now I hear them sown in Texas, east coast and other
parts of the country. Truckers all over the US are operating
illegally on 10 meters, so any ham in any part of the country will
hear them if they listen. I hear hams on both the east coast and
west cost talking about the illegal ops on the band. Sorry, you're
wrong.

I can't help it if you don't know how to monitor the 10 meter
band. Maybe you need better equipment or you don't know how to use
it. When you say you scan between the high and low of 28.085 (how
do you scan the high and low of one frequency?) it makes me
wonder. And you say 'probable non licensees', if they were on
voice in English on 28.085 they most certainly were non licensees.

Unfortunately, the head of steam that may get the enforcement ball
rolling in this area may become the victim of bad timing. By the time
they get solid legislation in place, the sunspot cycle will have
retreated to the point that only local and regional traffic will be
heard. Once the bands become more quiet, the truckers may move back down
into the "freeband" area. Many hams, who only use 10 meters when the DX
is hot, will move back to other bands, and the problem will only be
witnessed by those with an axe to grind. From the FCC's perspective, the
whole problem may be downgraded to a non-issue once again.

There you are...! Funny as heck to see you over here, but not
really unexpected. Here are some answers...

: A.E. 352 <ae352@iwon.com> wrote:
: 1. Did Bob McQueen ever grow up?

No, but he grew out quite a bit. About the size of a house the last time
I heard anything about him. But I did hear he is still a nice guy, just
more of him around to prove it.

: 2. When did "Mike" date "Mimi?"

Yes, but we never heard if he got anything for the effort (except maybe
blue ____s). Was she a natural blonde..? How many kids do you think
has now..?

: 3. Have you ever seen "Mike's" 'Gibson '67 SG?

Think I did once... didn't I play it once..? I still have my SG (and my
other Gibsons), but I mostly play bolt on neck - Fenders for the big
shows. You missed some of our really large concerts... Maybe I'll send
you some backstage pics or video shorts.

: 4. Have you EVER 'Dropped the maul' from Mt.
: Vaca?

Doing it everyday... had to run a new seperate 200 amp service in to cover
the new load requirements.

: '73 from VERY Upstate NY...
: A.E. 352
: http://american-eagle.tripod.com

Tried to contact you once or twice via IRLP linking, but got bored listing
to guys just ramble about where they live. But I'm listening to the icw
setup a few nights a week in scan (when I can stand it).

How about you fire up that hf radio and burn a hole through the air to my
antenna. I've got a boobner-10k high powered amplifier that will burn a
hole back to you. Two years ago, I last lit it up and cause the West
Coast to have an energy shortage... :-)

good to hear from you pancake...
reply to the known email addresses
as Ron W would have said... "your weak" & "rawhide _____"

I was thinking maybe there was a particular simplex freq.
Storm chasers have settled in on 146.55

Sure would make it easier to make contacts.

I'm looking for a reasonable mobile antenna, if I can find one, and get it mounted before my trip, then I'll bring the 847 along, and work some SSTV on HF mobile.

In general, all other things being equal, the larger the antenna, the better
it works.
All shortened antennas are a compromise.
The 9' steel whip is still hard to beat. (For CB, anyway :)

Using a 9' whip on the ham 10 meter band, I've worked Japan and Russia on
25W SSB while driving up and down I-5 in california. Signals like they were
just down the street. If you leave off the spring, it's just right for the
10M band.

On the contrary, it works just fine and I do know
how to use it JJ, thanks for the help anyways.

>When you say you scan between the high and low of 28.085 >(how
> do you scan the high and low of one frequency?) it makes >me wonder.

Sorry my bad, I should've said 28.085 to 29.985
I wasn't listening to fm or for repeater traffic, but again
if it's so rampant, the owner of the repeater would shut it
down.

> And you say 'probable non licensees', if they were on
> voice in English on 28.085 they most certainly were non >licensees.

Most likely, as I said probable, but there was a
constant CW and I listened to that for a while, not
that I'm any good at it anymore.

In closing JJ, while you are having problems where you
are at and it seems the east coast is too, it doesn't mean
that billings Montana or for that fact Taos New Mexico
are. It is a problem, it is illegal, but this painting of it
happening in every state of the union, every city is just
plain wrong.

You see, even though we disagree, we can have a civil
discussion without throwing insults at each other.

Since you are still being reasonable civil, I will honor you with a
response.
I have no problem with people who take a different view from me, when it
involves subjective tastes and opinions. If I like Country & Western
music, and you like Def Leppard, there is no right or wrong, just a
difference of opinion.

But when you are talking about factual information, or defacto
standards, if you take a position that is contrary to those normally
accepted standards, it's up to the opposing party to make the case why
the standard is wrong. In your case, you need to explain why running
illegally should not be considered criminal per the laws set forth by
the FCC. The fact that you, yourself feel it, is not sufficient
evidence. And once you do that, make the case to the lawmakers, and
hopefully this will all become a moot point.

> I am certain you didn't get that from your "How to Win Friends
> and Influence Them" guide for practicing socialists, but your post was
> timely, as it gives me a perfect example to point out of what I
> illustrated yesterday concerning those hammies who are secure in their
> ignorance and false sense of security.

Like I've said before, many times, I don't mollycoddle people. I don't
sugar coat my information. If what I say doesn't sit well with you,
prove it wrong, or deal with it. Posting a contrary OPINION, does not
automatically invalidate my information or my position.

> Since I have pointed out your
> misbehavior you have indeed reviewed your archive collection and the
> fact that you were repulsed enough by what you saw made you admit your
> character flaws .

Wait a minute. Now you're starting to go off the path. I have reviewed some of my past posts. Mostly to see when I really started posting here. I see nothing especially inflamatory in most of what I've written. In fact I try to make a point to refrain from emotional inflection as it clouds objectivity. I am usually a straight up and to the point guy. I don't make personal insults, unless they were thrown at me first. Compared to some of the more "colorful" people here, I am mild.
What "character flaws" have I admitted to, out of curiousity? I don't recall doing any such thing.

>.......... that is a good thing, a first step. Your
> words are there for all to enjoy, whenever they wish.

And many of them have been quoted in other people's tag lines. I think my advice and insight have been on the money far more than it has been off. Once again, you are free to disagree with my assessment of society, and how it has regressed in recent years, but unless you can counter that view with something equally compelling, it does not make me wrong.

> You now to the
> side-step and and expect us to disregard your own words and believe the
> spin you are telling us now that you have grown up since then.

What words am I trying to get people to disregard? And yess, I have changed my viewpoint in the last 10 or 15 years. Most people do when they get older. It's called maturity.

> I give
> everyone the benefit of doubt at first...you are no longer worthy of
> such delights. You must unprove yourself..a reputation is much harder to
> repair than destroy, but you can't say you weren't warned.

And that perception is up to the individual. You are free to make a mental black mark against my reputation. But that does not mean that others will share your view. You too have a somewhat dubious reputation. It's all about your perspective.

Mr. Riley Hollingsworth of FCC WILL and DOES send warnings based on recorded information gleaned by unofficial observers. Most of the time, the companies for whom the
drivers work take such warnings very seriously. They then normally discipline the driver(s)
involved, even going so far as to physically inspect the truck and, finding illegal equipment as
described in the warning letters, order it removed, OR even FIRING the employee(s)
involved! If you are not aware of it, this is what happened in the case of the Cheetah Transpor-
tation driver who was monitored near Rock Hill, SC. Quite simply, the Safety Director inspected
the truck and found the radio as described via phone conversation with Mr. Hollingsworth. Such
radios such as certain Galaxy and Connex models are illegal to even import into the country.

>

The reason that illegal radio operation, whether it is interference to Amateur or other radio
services, will get attention is because, truth is, if illegal operators can get away with operating
on the Amateur bands, then there is no reason for them not to operate on other, even MORE,
important radio services----such as the international HF aviation band. Mr Riley Hollingsworth,

Special Legal Counsel for Amateur Enforcement IS concerned with illegal operators because that
is his JOB; it is what he was appointed for. What you DON'T know is that a ham was just recently
appointed to Billy Tauzin's powerful sub-Committee on Communications, likely in response to a
barrage of complaints from individuals, the ARRL, and hams about the enroachment of CB operators onto the ham bands. IF you don't believe that Amateur Radio DOES occupy a much
"higher" rung in importance as opposed to CB, consider this; when PL106-521 was passed, giving
local LEOS the ability to pass legislation and abate interference from illegal and over-powered CB
sets, Amateur Radio and all other licensed services were EXEMPTED from this. At this very mo-
ment, there is a new Federal Bill passing thru Congress to exempt Amateur Radio antennas from
CC & R covenants. Why? So that Amateur stations can provide a wide, effective and dispersed
back-up communications system in time of emergency. Because of the dedicated hams, their ARRL-sponsored emergency training courses, and their rapid response to disasters for nearly 100
years, this Bill is likely to become law as more and more Congresspersons are signing on as sponsors. CB radio will get NO such exemptions.

With the appointment of Greg Walden of Oregon to the Communications sub-Committee, he arrives with the knowledge of the problem of outlaw radio operators that think they can just steal
frequencies without fulfilling the requirements set forth in Title 47 of the US Code. Because Amateur Radio IS considered to be a valuable communications resource, it is quite likely that Mr
Walden can be "persuaded" to introduce additional legislation to protect that resource from inter-
ference. The studies, the suggestions, the flurry of letters have been in progress for some time to
find ways to deal with this. The war on terrorism has NOTHING to do with interference to licensed services who have every right to expect that their spectrum assets are available to them
free of intrusion. One of the ideas that has been put forth is the RESTORATION of enough funds
for FCC to go after the truck stops, CB shops, and other outlets who are actively promoting the
sale and use of so-called "10 Meter" radios that are already enjoined from import into the USA.
Another idea is to allow state DOT agencies to routinely inspect trucks for said radios using a list
supplied by the Customs Service or FCC--among a few others. You are correct in that FCC cur-
rently does not have enough funds to aggressively go after illegals, BUT that can change.

The FCC is not engaged in fighting terrorism except in monitoring for possible radio traffic that
could indicate terrorist activity. Their job is to regulate and enforce the Communications Act of
1934 as amended. That includes protecting licensed users from intrusions from "tan fer thar, driver"
on frequencies those truckers have no business being on. It will take time, but those bands, includ-
ing 10 and 12 Meters, WILL be defended. AND those "vigilante" hams WILL continue to silently
record, document and report the activity of truckers or anyone else who encroaches onto the inter-
national ham bands.

> C. Try a new experience. Turn off all your ham radios and spend
> some time with your wife, kids, grandkids, family, etc. And
> stop bitching about no code techs. I heard you bitching about them
> with your buddies on two meters last night. Some of those no
> code techs make six times the money you make!

You are full of CRAP! I haven't been on 2 Meters in over a week, and you have NEVER heard
me say a word about a no-code tech! A no-code tech is a HAM. Period! It makes no difference
(to me) that I happen to have more privileges than a no-code tech.

What anyone makes is of no concern to me! I am retired on gross of $30,000 + + at age 54! I
am living the life of Reilly (not Riley). I LOVE those warm days down at the lake fishin'!

I don't "want" anything. But you need to examine how you interpret
information. Many things have been said, much of which has not been
insultive in a personal nature, yet you seem to take it that way. In the
course of discussions, many people on both sides have been painted by a
fairly wide brush. Much of it is true, and some is not. There are some
valid issues here and getting defensive and confrontational does not
help to resolve them. It is also true that there are some people here
who enjoy nothing more than provoking an arguement, and then standing by
and watching the fur fly.

To be perfectly honest, I enjoyed this newsgroup much better when there
were more technical discussions. Before the illegal/legal "debate"
pretty much polarized the group, and destroyed any hope of peaceful
coexistance.

To Aaron's points. I agree that there are people who don't know where
the line between legal and illegal falls. I've run across people who
actually believe that an export radio is perfectly legal to use,
because, they bought it at a legitimate store, and that store wouldn't
sell something that's illegal. That sort of naive viewpoint, is what
drives guys like Aaron, and myself, when we post reminders of illegal
activity.

Those of us who know the rules and deliberately ignore them, are taking a gamble. Many people will never see any enforcement action. Some will. It all depends of how high a profile you keep.

People who run modified radios and high power also need to be aware of the interference potential they can create, and to accept responsibility for it. Part of living in a civilized society is coexistance with other people. As long as you are cognizant of the rights of other people, and take steps to be a "good neighbor" you're less likely to ever have legal problems. Courtesy goes a long way toward minimizing run-ins with the law.

You and I would probably have gotten along just fine when I was in my younger days. Even now, I find that I am much more tolerant of other people's lifestyle choices, as long as they don't infringe on other people's rights.

I said I was THINKING about it. The points that you bring up are the
main reasons why I have not done it. The very real possibility of
interfering with an emergency or important business call (Of which the
driver should not be driving while taking care of), is why I have
reserved final judgement.

Be that as it may. Cell phones in the hands of oblivious drivers, stand
a greater chance of causing an accident and the resultant loss of life
as well.

Twistedhed <twistedhed@webtv.net> wrote in message
news:19811-3DB94B2D-117@storefull-2312.public.lawson.webtv.net...
Well Jerry I went to a coffee break with some fellow radio hobbyists tonight. So on the way there I tuned in to 28.085 MHz and yup they were there all right, not loud but definitely there. Later, by a few hours, after the coffee break I again monitored 28.085 MHz, and they were still there. A different group this time, and louder. So I have to agree there're there for those who really want to take the time out to do the monitoring. And just for the record I was driving I-75 south to I-696 west, south on Southfield road to the south bound Southfield freeway, and finally to west bound I-96. I heard the bozos the whole way there at around 5 to 6 PM, and about half way back home around 9 PM. I had an idea of another way to attack the problem Jerry. Instead of going after the so-called export-radio, or the truck drivers directly, let the Department of Transportation do the work. Since many of the 10m intruders seem to be truck drivers just have the Department of Transportation mandate that commercial trucks can ONLY have company provided GMRS UHF 2-way radios. They regulate just about everything else on the truck already so the radio is just one more minor item. The 11m antennas are hard to hide, and those small enough don't work worth beans. Thus it would easy to spot the illegal equipment during inspections at weigh stations and when ever a cop pulls a rig over for a safety or traffic violation. The fines would be directed to the owners of the over-the-road rigs. Once the owners get stuck paying a big fine, and possibility firing the driver, or taking other corrective action, the word will get out real quick. No unauthorized radios, period. Once the truck drivers find that many of their fellow drivers are moving to GMRS radios they will not complain much about using it themselves. The point is the drivers mainly talk to each other, thus when you can move a significant number of them off of 11/10m the rest will naturally follow just so that they can still stay in contact. A 25 watt GMRS UHF radio will work just fine with keeping in contact with fellow drivers for 5 to 10 miles up and down the highway. There is no need for the drivers to know where the local police are unless they have equipment safety violations, are overloaded, or just plain speeding. In any case if they get stopped and fined, so be it, particularly for speeding. I'm sure many of you have been passed by a big rig doing 70+ in a zone clearly marked "Trucks 55". The main use the drivers need the radio for is safety, notification of road hazards, to keep each other amused while driving long hours, and to contact the dispatcher. If the drivers don't have the discipline to use FM correctly, they sure didn't learn how to use AM either judging by all the music playing I hear on 19 all the time, them perhaps we can get rid of the radios all together, then let the drivers use cell phones instead for critical messages.

Once the truck drivers are off 11/10m the demand for the so-called
export radio will drop way off, thus the job of blocking their
importation will be easier. Also the word will get out to the rest of
the pirates that 10m intrusions are being dealt with seriously will
further discourage others from using the rigs further reducing the
demand. Making an example out of the truckers is easy because they are
always exposed to inspections at any time any where, i.e they can't hide
at least not for long.

KC8LDO
Saw this on a Tee-shirt:
"I am a
bomb
technician
if you see me
running
try to keep up "

Try putting that idea to a DOT man.
After getting laughed at for being pompous, you can start looking for
budgets to slash from to pay for the extra men your asinine proposition
would mandate for you, as usual, neglect the most obvious......money.
DOT may be state run, but receive a great deal of their monies from the
feds. The feds track record is well known on cb enforcement. A large
cash influx isn;t on the way and that's the only way it could happen.
Hey, don't take my word for it, I'm just a lowly freebander that enjoys
some Dx. Ask JerryO to ask Riley about this. Will you take his word, or
has that self-righteous thing blinded you to not only those that don;t
agree with you, but those that remain neutral or refuse to take sides at
all? Never mind, we know your side, and then we know the truth.

Nope! It is going to be addressed thru Congress--namely Greg Walden, now of
the sub-Com-mittee on Communications. He will be "encouraged" to look at
ways to facilitate the FCC's much-
needed efforts to rid the airwaves of bandit operators that think they are
"entitled" to just take what
they want. I like Leland's idea; I might just pass that on to Mr. Walden.
Leland, why don't you look up Mr. Walden's address and send this idea to him
as well?

Jerry

You do make a valid point there.

> freebanding cant acuse any of these.

I assume you meant "freebanding can't cause any of these."

How do you know? How do you know who you may be interfering with
by being on frequencies you are not authorized to use. Still does
not mean it is any less illegal. It is illegal.
There is a street near my house that is a very wide street and the
speed limit is 35 mph. I really think that that is too low a speed
limit for this street, in my opinion it could easily and safely
handle 45 mph. But the legal limit is 35, so I don't drive 45 just
because in my opinion I disagree with that limit. Just because you
feel that you are causing no harm by operating on those
frequencies does not give you the OK to use them, to do so is
illegal anyway you slice it. I would guess you take this same
attitude towards operating illegally and apply it to other aspects
of your life as well.

Total Bullshit...Only Federal Authorities can confiscate radio equipment.

==========

Remember this story kids?

(Oct 1997)

West Virginia Sheriff confiscates $75,000 in CB equipment

CBers passing through Fairmont West Virginia are learning the hard way to keep dirty words off the air. This, as the Fairmont sheriff's department has already seized $75,000 worth of citizens band radios from foul-mouthed operators.

Authorities call it an effort to end the use of profanity on the 11 meter Class D Citizens Radio band in West Virginia. According to news reports, in one incident a tractor-trailer driver made the mistake of directing some rough language toward Sheriff Ron Watkins. Watkins says that this particular CB'er was overheard making obscene comments while the sheriff was patrolling in his squad car. Apparently the trucker CBer didn't think that Watkins was listening but the sheriff was tuned into his every word. This CBer became one of many who'se radios Sheriff Watkins has confiscated.

Watkins says that profanity and sexually explicit language have been a problem on the airwaves for years. He decided to crack down after receiving a complaint from a local resident. Watkins says the man was a father whose son and his son's friends were studying to obtain a ham radio operator's licenses and who overheard the dirty language while listening to a shortwave radio.

So far none of the fourteen foul-mouthed CB'ers stopped by Watkins have been arrested, but the Sheriff says that he plans to file charges against several.

Meantime the county has quite a pile of eleven meter sets in its evidence lock-up and nobody from the FCC has bothered to tell Sheriff Watkins that he lacks the federal authority needed to confiscate CB radio, or any other radio gear.

Sorry, your are plain wrong, it *is* happening all over, maybe not right in Billings Montana or Taos NM. These truckers are out on the Intestates all over the country using 10 meter radios illegally. When I hear these illegal ops, they are not where I am, I am hearing them via skip so they are hundreds of miles away. They are up near Billings and down near Taos, out near L.A., down near Dallas, near Atlanta, near Chicago, near NYC, near Miami, near Kansas City, near Phoenix, near Salt Lake City, out in the middle of nowhere...all over the country. It is happening in every state as they travel through. On rare occasions, I may hear one locally.
Someone listening on the east or west coast my be hearing truckers operating illegally on 10 meters passing through where I live that I can't hear.
When Jerry O monitors, do you think he hears he same ones I hear? I don't know just where he is but he will probably hear those I can't and visa versa.

> MURS users being able to talk with 'anyone else with a MURS radio' is
> different from the first statement and not exactly the same limitation?

They are totally different situations.

> I'm
> confused about what th' heck you're talkin' about. GMRS to GMRS and MURS to
> MURS, right?

With GMRS, you can't just have a few radios laying around, and just
hand them to a buddy or co-worker and have them talk to you(unless
they happened to have a separate license, which isn't likely).... with
MURS you can.

A business can have 5 MURS radios sitting in chargers, and ANYONE can
grab one and communicate with anyone else at the business that has
one(big no-no with GMRS).

If you want to go to Disneyland/Beach/Park/wherever with a bunch of
buddies, and hand them some extra MURS radios so you can keep in touch
- you can. With GMRS, you can't.

You are forgetting freespace path loss(which is really just a function
of antenna aperture). You may have equal gain, but are taking it in
the shorts on freespace path loss at UHF vs. VHF.

When you combine all the factors, in general, VHF is preferable to UHF
for the average outdoor LOS low-cost, low-power communication link.

Wealthy hams!.....LOL. Gee's General, now you're really taking a trip to Fantasy Island. Lets see if we get this one straight.....The same guys that nickel and dime you over at the local hamfest by trying to get a $1500 radio for $200 are secretly financing and deploying this modification of yours?? That's a real good one.

I know this one supposedly wealthy ham that's been waiting a year for $6.00 Silver PL-259's to be marked down to $3.50 a piece so he can buy the 3 or 4 that he desperately needs.....These are the guys running this clandestine Trojan operation?

The phrase "Wealthy Hams" is an oxymoron.

> as well.

The problem rests in the loose nut behind the wheel.

If we're going to get on driver distractions, then there's a whole big long list, of which cellphones are just one item. Some drivers are barely capable with NO distractions, others have no problem. Stereos, Makeup, Shavers, Maps, Newspapers, Radios (CB/Ham/Police etc), Fast Food...

For example, I've been in three accidents in the last 10 years. One, I lost control during an ice storm, and went into a telephone pole. Wasn't talking on the phone at the time, though it did come in handy later for calling the cops, ambulance, and tow truck. Twice I was in accidents while I was on the phone.

Both times, rear ended while sitting at a red light... Kinda hard to blame the phone.

Sunday, I'll likely be off to Georgia again, and I'll likely be using my cell phone a fair bit on the way.

I was waiting for somebody to point that out. It's not really a
problem. There would be an exemption, like Hams already do for
scanners in mobiles. A licensed Ham on 10m is not an intruder.

> I talk to several licensed hams daily on simplex or on the

Not with the exemption. The ones who will be mainly affected are the
unlicensed CBers / Truck Drivers.

Did you try looking at the Yaesu ATAS-200 screwdriver antenna? Its
designed to tune automaticaly with several Yaesu rigs including the
FT-847. That would give you access to just about every band while
mobile. Just press the "Tuner" button on the rig and the internal
micro does the rest for you! Can't get any easier.

That is what some ops fail to understand; Amateur Radio has some pretty good
allies in Congress
right now in the aftermath of 9/11. More and more, those that truly count
in government (Repre-
sentatives, committee persons, local and State EOC personnel) are becoming,
or are already, aware of ham radios value in time of disaster. The question
gets asked, "What can we do to facil-
itate the use of Amateur Radio in case of disaster, or even to head off such
disasters?" Already, the
abatement of restrictive covenants in neighborhoods is being addressed in
Congress. And, after this Bill is passed (it will be), then Amateurs (some
have already) will begin making the right contacts and explaining what is
happening, why it has to be stopped, and some ideas as to HOW to stop
it--like Leland's idea with DOT. The key is, these appeals center around an
activity that is
illegal according to US law and carry weight in that respect whereas any
leverage exerted on behalf of truck drivers who are DOING the illegal
activity will be a hard sell.

Again, I don't think hams are asking for so much; keep the 10 meter radios,
but disable their ability

to go into 28 MHZ, and you would not hear a word about it from most hams.
But NOOOOO!
They want theirs and everybody else's, too. And THAT ain't gonna stand.

JerryO wrote:
>
With the appointment of Greg Walden of Oregon to the Communications
sub-Committee, he arrives with the knowledge of the problem of outlaw
radio operators that think they can just steal
frequencies
<<

Just how in Sam Hill did you arrive at this conclusion? Did he state as
much?
I am vaguely familiar with what Walden HAS said and can't seem to find
anything that resembles that remark.

>
without fulfilling the requirements set forth in Title 47 of the US
Code. Because Amateur Radio IS considered to be a valuable
communications resource, it is quite likely that Mr Walden can be
"persuaded" to introduce additional legislation to protect that resource
from inter-
ference.
<

Interference and intruders are two separate entities.

>
The studies, the suggestions, the flurry of letters have been in
progress for some time to
find ways to deal with this.
<

You and a few cronies, such as the ones that claim "Official FCC
Observer" status constitute a flurry? Hmmm....maybe it is.....we see how
the nocontents have forged on this group, wouldn't put it past them to
forge letters and sign their neighbors name. It's the kind of folks we
are dealing with, ya' see.

>
The war on terrorism has NOTHING to do with interference to licensed
services who have every right to expect that their spectrum assets are
available to them
free of intrusion. One of the ideas that has been put forth is the
RESTORATION of enough funds
for FCC to go after the truck stops, CB shops, and other outlets who are
actively promoting the
sale and use of so-called "10 Meter" radios that are already enjoined
from import into the USA.

<

Restoration?
Where they gonna take it from?
Has that been explored? Until then it's not even a viable option.

>
Another idea is to allow state DOT agencies to routinely inspect trucks
for said radios using a list
supplied by the Customs Service or FCC--among a few others. You are
correct in that FCC cur-
rently does not have enough funds to aggressively go after illegals, BUT
that can change.
<

Anything is possible. I mean, if Al-Qaida started using cb, yea, you'd
get your enforcement.

>
The FCC is not engaged in fighting terrorism except in monitoring for
possible radio traffic that
could indicate terrorist activity.
<

And oh, buddy, they monitor full time. See Echelon.

>
Their job is to regulate and enforce the Communications Act of
1934 as amended. That includes protecting licensed users from intrusions
from "tan fer thar, driver"
on frequencies those truckers have no business being on.
<

Then shouldn't the current head of the FCC resign for dereliction of
duties, IF their position is what you claim?

>
It will take time, but those bands, includ-
ing 10 and 12 Meters, WILL be defended.
<

They won't NEED defended when the skip goes away. C'mon Jerry, what did
you do, sleep through the last cycle? Same problems, same
bitching.....but it's all good.

>
I haven't been on 2 Meters in over a week, and you have NEVER heard
me say a word about a no-code tech! A no-code tech is a HAM. Period! It
makes no difference
(to me) that I happen to have more privileges than a no-code tech.
<

Sure it does. A few of you upperclassmen reiterate the fact that y'all
are NOT nocodes. Can't say I really blame you, seeing what takes place

around here.

>
What anyone makes is of no concern to me! I am retired on gross of
$30,000
+ + at age 54! I
am living the life of Reilly (not Riley). I LOVE those warm days down at
the lake fishin'!
J
<

That ain't bad, but man, 20 plus years for them ungrateful wretches and
that's how they repay you? I hope they at least gave you a kiss.
Spend that money on some new fishing gear and come down south.....the
bass are hittin' and the yankees are crowding the beaches...we can hit
the backwater swamps and avoid the crowds.
How much blackwater fishing you done?

> are out of this world and way off your rocker.

You're just peeing in your shorts because it just may work, and you
don't like that much.

> and btw do you really think
> those music players are drivers?

When I see the signal strength go up, then down, as I pass the semi
that's a good clue. Second they sometimes admit they're a truck driver
when they are passing four letter word insults back and forth with
other drivers, when they're not playing the music. Of course if
somebody is playing music on the air jamming channel 19, there're not
a nice person, nor a good CBer are they Timmy?

> i'm sure there much to busy.

Yeah, right, too busy. I suppose they play video games, read, work on
the car, etc. when they are driving a rig down the road for 10 to 14
hours a day. Nobody is that dumb Tim. While stting in that driver's
seat bored out of their ever loving mind they have nothing much else
they can do except play radio, or a radio DJ as the case maybe.

> you can bet its
> the base stations

Yeah I've heard them play music too. Just another black mark for CB
radio.

> or people like you pissed at truckers who are doing it.

I don't own a CB Tim, but I have to admit it is fun monitoring the
CBers getting ticked off over other inconsiderate CBers on the band.

"Sandbagger"
==========
Hi Dave. Still espousing the philosophy that if someone else doesn't
view something the way you do, the other person must suffer from
deficits.

==========
>
Since you are still being reasonable civil, I will honor you with a
response.
<

I'm always civil until unnecessarily provoked.

>
I have no problem with people who take a different view from me, when it
involves subjective tastes and opinions. If I like Country & Western
music, and you like Def Leppard, there is no right or wrong, just a
difference of opinion.
But when you are talking about factual information, or defacto
standards, if you take a position that is contrary to those normally
accepted standards, it's up to the opposing party to make the case why
the standard is wrong. In your case, you need to explain why running
illegally should not be considered criminal per the laws set forth by
the FCC.
<

No, I don't. I need explain nothing to anyone.
That is where you guys start getting out of hand and losing your temper.

>
The fact that you, yourself feel it, is not sufficient evidence. And
once you do that, make the case to the lawmakers, and hopefully this
will all become a moot point.
<

Lawmakers have nothing to do with my behavior. Like I said before, you
have no clue whether I break the law.

I am certain you didn't get that from your "How to Win Friends and Influence Them" guide for practicing socialists, but your post was timely, as it gives me a perfect example to point out of what I illustrated yesterday concerning those hammies who are secure in their ignorance and false sense of security.

>
Like I've said before, many times, I don't mollycoddle people. I don't sugar coat my information. If what I say doesn't sit well with you, prove it wrong, or deal with it. Posting a contrary OPINION, does not automatically invalidate my information or my position.
<

Never said it did, but getting personal, lying, and making personal and OT comments about folks immediately invalidates your positon.

Since I have pointed out your
misbehavior you have indeed reviewed your archive collection and the fact that you were repulsed enough by what you saw made you admit your character flaws .

>
Wait a minute. Now you're starting to go off the path. I have reviewed some of my past posts. Mostly to see when I really started posting here. I see nothing especially inflamatory in most of what I've written.
<

Which is why they need pointed out every so often.....you fail to see them.

>
In fact I try to make a point to refrain from emotional inflection as it clouds objectivity.
<

Since when? Last weekend?

>
I am usually a straight up and to the point guy. I don't make personal insults, unless they were thrown at me first.
<

You are lying again, Dave. You have attacked me with personal comments many times. Go back to our very first disagreement in this forum, Dave...you came off like a dick for no reason other than me stating an opinion you didn't like, so don't spread that BS here.

>
Compared to some of the more "colorful" people here, I am mild.
<

They are all mild. And impotent.
And it pisses them off. You hear the DX today? HAhahhahahahha....there were some serious pissed off hammies trying to get through....they just didnt have the azz for it.....hahahahahahahahha!

>
What "character flaws" have I admitted to, out of curiousity? I don't recall doing any such thing.
<

You think being a smug, disenfranchised, troubled youth are GOOD traits?

..... that is a good thing, a first step. Your words are there for all to enjoy, whenever they wish.

>
And many of them have been quoted in other people's tag lines.
<

Sure, it's part of you guys impotent smear tactics...forge, lie, deliberate disinformation and incorrect quotes, post satellite pics....hahahahahahaha..poor pathetic bastards!

>
I think my advice and insight have been on the money far more than it has been off. Once again, you are free to disagree with my assessment of society, and how it has regressed in recent years, but unless you can counter that view with something equally compelling, it does not make me wrong.
<

You are right, it doesn't make you wrong, it does however, make you a socialist.

You now do the
side-step and and expect us to disregard your own words and believe the spin you are telling us now that you have grown up since then.

>
What words am I trying to get people to disregard? And yess, I have changed my viewpoint in the last 10 or 15 years. Most people do when they get older. It's called maturity.
<

dave, you have started with me so many times in here, true to form, just like Lelnad, Frank and the other trouble posse members that pledged to cause trouble in rec.radio.cb.

I give
everyone the benefit of doubt at first...you are no longer worthy of such delights. You must unprove yourself..a reputation is much harder to repair than destroy, but you can't say you weren't warned.

>
And that perception is up to the individual. You are free to make a mental black mark against my reputation. But that does not mean that others will share your view. You too have a somewhat dubious reputation. It's all about your perspective.
Dave
"Sandbagger"

I don't "want" anything. But you need to examine how you interpret
information. Many things have been said, much of which has not been
insultive in a personal nature, yet you seem to take it that way.
<

Wrong. You do it so often you fail to realize it...it's almost like it's
second nature to you....but if you are honest in your efforts.......that
remains to be seen and as always, I will give you the benefit of doubt.

>
In the course of discussions, many people on both sides have been
painted by a fairly wide brush.
<

The sides only exist because of the inflamed malice coming from the
nocode camp and a few upperclassmen. Seems this camp can dish it out but
can't take it when it blows up in their acne-scarred faces.

>
Much of it is true, and some is not. There are some valid issues here
and getting defensive and confrontational does not help to resolve them.
It is also true that there are some people here who enjoy nothing more
than provoking an arguement, and then standing by and watching the fur
fly.
To be perfectly honest, I enjoyed this newsgroup much better when there
were more technical discussions. Before the illegal/legal "debate"
pretty much polarized the group, and destroyed any hope of peaceful
coexistance.
<

But you readily jumped aboard when called to the trouble-causing posse.
I don't believe you, but as you pointed out,,,so what!!

>
To Aaron's points. I agree that there are people who don't know where
the line between legal and illegal falls. I've run across people who
actually believe that an export radio is perfectly legal to use,
because, they bought it at a legitimate store, and that store wouldn't
sell something that's illegal. That sort of naive viewpoint, is what
drives guys like Aaron, and myself, when we post reminders of illegal
activity.
<

Go play in traffic, Dave. No one believes for one second that Aaron is
doing anything other than amusing himself at the expense of others. The

aptly named posse are all guilty of this and yes, the posts are there.

>
Those of us who know the rules and deliberately ignore them, are taking
a gamble.
<

Depends on the rule.

>
Many people will never see any enforcement action. Some will. It all
depends of how high a profile you keep.
<

Which is what I have always maintained.

>
People who run modified radios and high power also need to be aware of
the interference potential they can create, and to accept responsibility
for it.
<

And how would one accept responsibility for running their modified
radio?

>
Part of living in a civilized society is coexistance with other people.
As long as you are cognizant of the rights of other people, and take
steps to be a "good neighbor" you're less likely to ever have legal
problems. Courtesy goes a long way toward minimizing run-ins with the
law.
<

No problem there. Agree.

>
You and I would probably have gotten along just fine when I was in my
younger days. Even now, I find that I am much more tolerant of other
people's lifestyle choices, as long as they don't infringe on other
people's rights.
Dave
"Sandbagger"
==========
<

This is where we differ. I feel I could get along with anyone,
regardless of age and view point they espouse on usenet. I would give
the benefit of doubt that most wouldn't let their personal feelings
dictate their get-along-with-another factor.

I'm thinking of doing just that since Timmy is peeing his pants over it,
and Twisted is trying his best propaganda to discount it. That means it
must have a good chance of really working!

It's not a bad idea. The radio tells the antenna "up" or "down" in short bursts, and samples the SWR at low power till it finds the right spot. Question is, can I get my hands on one tomorrow, and get it installed, while I proof out a set of prototype boards, and route another set, before I take off on sunday am?

Is there some sort of redeeming quality about talking like an uneducated
hick? If it talks like
an uneducated hick, you must forgive anyone who equates that with crappy
trailer parks and
rusty '75 "Pony-acks" sporting twin 'whups' and running on 5 cylinders
(FOOOMP FOOOOMP
FOOOOMP FOOOOMP!) You may flame me, but that IS the image much of America
has of
CB radio. Operating outside the law doesn't help the image of stoop-idity;
that is, stooping to
breaking the law just to talk on a radio.

I was comparing a UHF Yagi with a VHF dipole, for a situation where you don't have room for a VHF Yagi (i.e. apartment balcony). A UHF Yagi can have *much* more gain than a dipole, making up for the path loss difference.

>When you combine all the factors, in general, VHF is preferable to UHF
>for the average outdoor LOS low-cost, low-power communication link.

Yes, if you have room to choose the same antenna type at both frequencies.

Dave

I didn't SAY he MADE any remarks concerning the issue. He has, however,
received letters
from various people, including me regarding the problem. Therefore, he does
know about it.

> TVI a household word.

Wrong again. It is CHEAP CONSUMER ELECTRONICS that made TVI a household word. Not amateurs, not CBers, not anything else. Improperly filtered and cheaply constructed consumer electronics did the job.

In the late 70's the amount of CBers outnumbered
> hams by over 8 to 1, and that was based on licenses. There were many
> more CBers who never obtained a license. Judging from the attitudes
> expressed here on this newsgroup, it is easy to see that most of you
> guys care little, if at all, about following FCC rules.

Why is that? You make a quantum leap in your so-called "logic" there. Can you see the problem?

So why is it so
> hard for you to accept the fact that because CBers are more likely to
> break the rules, illegally modify their rigs, and run high power, they
> are also more likely to cause interference?

Nope. The fact that you are blinded by your license makes it impossible for you to accept that many more hams use illegal power and are more likely to cause interference.

>

Really? I haven't heard any of that "fair amount of CW traffic" yet. And only ONCE heard any alleged intruders.

> >

What, exactly, is "so many"? 5%? 10%? Does anyone really know? Certain people (yourself) claim that "all CBers are criminals" based on - what? How can you possibly claim that? Do you actually KNOW "all CBers"? If not, you're just inciting the rabid anti-CBers like Aanal Aaron and Georgie-girl, who should have something better to do than whine about so-called "illegal" CBers. To be blunt, if they're "CBers", they're not illegal; if they're "illegal", they're not CBers. Comprene?

> > The first part of your first sentence says it all: "There probably

> it or lose it".

You've been listening to Aanal Aaron and Frank ("yeti") too much, I think.

>
> Dave
> "Sandbagger"

It's not really YOUR call to make, either, is it? [I assume (from your "handle") that you're not a ham.] It's also not Aanal Aaron's call to make (since at best he has a no-code Tech license and at worst he has no license; either way he cannot legally use 10 meters) and not Georgie-girl's call to make (since he could actually be there preventing intrusions). So what's your problem?

Actually, the person would only have to get one license since the person on
the other end is her Mom.

This is not correct. GMRS users may talk to FRS users on the Interstitals.
There is no rule that says you cannot do that.

PRIVATE? Anybody with an older, cell-capable scanner can listen in.
How is that "private"?

> > Landshark
>
> Thanks Landshark this post will be my proof to Dickhead cranium that Cb is
> in fact dieing.

So you're more than willing to misinterpret if it suits you? He didn't
say "CB is dying", he said it's "slowing down", which is correct given
the decline in the 11-year sunspot cycle. That's a regular thing,
which an "Extra" like you should really know about, Georgie-girl.

> He says there are antennas all over the place and 30-40 million users over
> 10% of this countrys popluation are Cbers. lOl Thanks again for the info.

Have you bothered to look for antennas? There are still way more CB
antennas than amateur antennas anywhere you go. And you still haven't
provided any proof otherwise, Georgie-girl. Loser.

My name is Richard; YOU are the "dickhead".

Do you ever NOT obey a speed limit? Do you ever do anything that is a
"violation"? Same-same.

> > Cb is slowing down, slowly but surly, because of
> > cell phones IMO.
>
> I would agree with this 100%. Add to it the internet, and you've got
> most of the big picture.

Which is most of the BIG problem of amateur radio. Why would someone
learn obsolete forms of communication just to talk to a dwindling
number of people around the world, or, even worse, a bunch of jerks on
local repeaters, when they can "chat" on the internet for free without
a license?

> > Go take a look around the neighborhoods,

> That's not a really good example.

In fact, a really poor example. He said it himself: A $40 (one time
charge) CB or a $10/month phone. That's $120 per year, forever for the
phone. I don't see any comparison at all.

A CB would pay for itself after a few
> month's usage. I don't know about you, but I got into radio as a hobby,

And the really big blessing of radios is: You can turn them OFF if you
don't want to be bothered. The cellphone will bother you everywhere at
all times. Why have one?

>
> > Cell phones are far more reliable and way more private.

I'd argue both points. If they were "reliable", why did the system
fail in NYC on 9/11/01? And "private"? Don't you believe it.

> For a true radio hobbyist, privacy is a negative. One thing you can't do

"He knows"? Can you prove that statement, Aanal Aaron? Of course you
can't. If the truckers that you claim are intruding on 10 meters heard
amateur activity up there, do you think they'd still try to use the
frequencies? The fact is, YOU are "the" TROLL, Aanal Aaron, and you
only post to incite people to respond. Where's your PROOF that I'm
somehow Steve? You said you would "Gladly" post it, but you seem to
have convienently forgotten that post. Lame repetition is not proof.
Worse, you posted conclusive proof that I cannot be Steve. Hmmmm,
which is it?

And you have lost three addresses in just the last two weeks and are
about to lose another one for being stupid. Bye-bye, dimbulb. But
maybe you could post your PROOF before they dump you again?

Jerry Oxendine is a troll..... just like Aaron Voobner.
rec.radio.cb's equal to Richard Bullis.
What a piece of crap!

It's "lose" them, Georgie-girl. And he lost them, all right; he cannot post to the UseNet using them again. Yahoo! may not dump him (do they ever dump anyone?), but Google is blocking him as fast as he gets new addresses.

What happened to voobner@yahoo.com and avoobner@yahoo.com? Why isn't he still using them? Why is he changing email addresses every other day?

Hmmm, I reckon it could be done with a 900mhz ham transverter with a
2m or 440 input... of course the ham unit would have to be modded to
transmit below 144 or 420, depending on the freq multiplication
factor. The filter sections of the transverter would also need to be
tweaked for the high-800's.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm
afraid that I'm indirectly responsible for this troll who is
badmouthing you at alt.religion.urantiabook. You see he was only there
in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia
Beach, Va. 23464 He followed me to the UB usenet page from
alt.radio.pirate He and I (were) both formerly loosely associated
with each other in the shortwave pirate radio listening hobby. I USED
to be a shortwave pirate but my station has been permanently retired
for more than 2 years now. Stevie is still a pirate and is the

operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

I may be naive to some law or regulation, as I'm not a ham, but all
amature radios that transmit below 30MHz do not require type
acceptance by the American FCC. Since the Galaxy radios are marketed
as 10 meter radios, not CBs which must be type accepted by nature of
the service, how can they possibly be illegal to sell in America?

I'm not arguing as to who those radio's are targeted at. I mean, a 10
meter radio that tunes in fixed incriments and has echo-no question
it's being marketed to the freebanders.

But that would mean actually getting a life, Mr. Hog. How could someone like yourself say something that is so full of blasphimous. Oh. may the demons of ten codes and curse you with QRM and QRN. :-)
But honestly, there is somethig else being discussed on two meters besides ham rigs and the weather. Golly, I guess I'd better find all those boxes of radio's I have and see if they still work. I got tired of hearing old men dribble on about the rigs they just purchased or how they're going to call the police when they get home and report some kid in his pick up truck that was going 58 in a 55 zone. And people wonder why the hobbie is dying?

Can you believe what they want for those little boogers now? A single
PL-259 without the rg-58 reducer goes for $3.99 EACH at Radio Shack now.

I remember when they came in pairs and went for $1.99. Of course if you
waited till the local hamswap came around they were 25 cents each or less
depending on your bartering skills.

Times just ain't what they used to be, are they?

If they aren't silver-teflon, they aren't worth any price.
By the time you get them hot enough to properly solder in an RG-8 size
braid, they're melting the center insulator. Those shiny plated ones are
also tough to get the solder to adhere to, but the silver teflon ones just
flow.

3050. Re: Do Truckers use 10 meters ?

You are so full of crapola Oxendine that your eyes are
brown! Your lies do not scare anyone, least of all
truckers! But please do continue your ego mania
spew! The rest of us get quite a charge out of your
radio vigilante tantrums. Oh, and Riley says your
are one of the biggest whiners that continually calls him
about trivial nonsense. That figures!

Hams are allowed to make or modify a small limited number of rigs,
but mass produced rigs still need type acceptance from the FCC.
(Or whatever they call "type acceptance" nowadays).

<medica@cyberspace.org> was blabbling:

...Black face
...
...as well has the heavy finals
...

Well, Still the black faced 225's go for $77.00 wholesale and the
250's go for $86.00 and what do you mean by heavy finals? The 225's
only ran 1446's and those finals don't do jack. and the 250's run
2-2sc2879's and those are 80 watt finals... unless you volt them and
then they become 120 watt finals, till they blow up, which is what
they usually do.

Either case, you're looking at a amp that's quite honestly worth MAYBE
$85.00 bucks, if you're able to get that...

I soldered my first PL-259 way back in 1967 and have been burning
my fingers ever since. When the satellite TV craze hit in the 80's,
I learned about a new connector to hate, Soldering N connectors to
make pigtails. I found the best way to get solder to flow on any connector
was to swab a little solder paste on them. Includes the coax braid as well.

Can you imagine a world where there isn't the smoke of solder slowly
floating upward, into nostrils, lungs and eyes? I certainly can't!

The General's laboratory is constantly adrift with floating clouds of solder
and paste flux smoke. A beautiful sight to behold!

Anyone buying one of these amps must have more money than brains... if you
think you need that much power, you're mistaken.

Tom

3077. cobra 2000 on/off switch

Newsgroup: rec.radio.cb
Date: 2002-10-26 15:31:51 UTC
From: Adrian <adshar@iinet.net.au>
Message-ID: <7Ayu9.20154$Sr6.620318@ozemail.com.au>
Source record: 141857

Had a prob with cobra 2000 today wouldn't turn off on push button switch. Push button Switch is ok,Checked it out some and found it seems to switch on ground side probably controlling a transistor switch.I run the ac/dc selector centre positive through switch and soldered previous together off switch. Works fine but now counter doesn't revert to clock mode on off position. Tried discon on different positive wires to freq counter to no avail, however its probably a ground connection that works clock display?.I haven't identified the switching transistor yet as schematic is a bit hard to follow in that area.Anyone else seen this? Any advice appreciated. Well as I said switch was ok.unsoldered black wire on one side of switch and radio still lit up?On other side of switch is freq cntr and cb ground returns i.e. white and orange wires..I think the real switch is a transistor activated by this.still don't know which one.My schematic is hard to read.
regards Adrian

> the service, how can they possibly be illegal to sell in America?

Because the FCC labs have determined that certain of those "10 Meter" radios
do not
met their requirements for sale in the US. There is a list of *most*
Galaxy and Connex
radios that are illegal because 1) "real" 10 meter radios do not have
frequency readouts AND
channel indices, 2) 10 Meter radios are normally "single-band" radios and do
not require "band"
switches, 3) They do not meet technical standards for spectral purity. AND
FCC is smart enough
to recognize the REAL market for these "fake" 10 Meter radios (wink wink)
whose sole purpose is
to circumvent the regulations, allow for higher than allowed output, and
provide coverage from 14-30 MHZ; hence the "band" switch.

Jerry

<snip>

So because there is a problem out there in radio land we need more laws? More rules, more regulations? I'm sorry but that is stupid. This would also take away a drivers privilage to use a CB while driving, hardly seems fair to the 90% of legal station ops (I don't know how many legal vs illegal ops there are, I just don't hear many in my neck of the woods who are obviously illegal.) Not only do you want new laws you want Federal laws. When did Americans lose their way? When did they forget how Government works? Aren't we bloated enough?

Dave

Tell ya what fella: Go to www.arrl.org and click on Bulletins. Scroll down
to "Special Interest
Topics" and click on Enforcement. Then look at the bulletins around the 1st
or second week of
Sepetember where Mr. H. warned the Cheetah Transportation about unlicensed
operation. The
driver got fired over it. This warning is just one in a list that goes back
thru 2000. They have not
had the resources to go after this in a huge way, but lots of efforts are
being made to change that.
I don't have to "scare" anyone. The theft of frequencies, the rampant
operation of bootleg radios
on unauthorized frequencies WILL come to an end. All I am going to do is sit
back and snicker
everytime I read about one.

.............and I haven't talked to Mr Hollingsworth for over 2 months.

Leave it to Chuckie to screw up even on this!
2290's or MRF's would be an 80 watt final.
2879's have always been rated at 120 watts at specified voltage for the device.

> How much blackwater fishing you done?

Quite a bit. I was in high school in Northeastern NC where there are plenty
of tidal swamps and
black water. Herring runs, the lot. Fished for spots off Nags Head and in
Albemarle Sound.

One day a friend and I were drifting along under the Spanish Moss in the
swamp when a cotton
mouth dropped out of a low tree into the boat. AAAAAAAAAACCCCCKK! Henry
didn't
fool around; he went overboard! Not a great idea, but he was getting away
from that snake. I
picked up an oar and "dipped" the snake out of the boat. If you ever saw a
person walk on water,
Henry did it! HE came straight UP out of the water, grabbed the gunwhale,
tipping me almost over. But he got back in the boat! He yelled, "What th'
hell were you doin''? I saild, "Well, you
didn't expect me to take him home with me!"

I don't know about a "dictionary" and I would say that there is no single
website that has everything on it.
There are plenty of good CB and radio sites out there, you just have to find
what you want from between them.

For info on the UK legal issues, you could try the Radiocommunications
Agency site:
http://www.radio.gov.uk/
And for CB licensing:
http://www.radiolicencecentre.co.uk/rlc/

For sales:
Truck King - http://www.truck-king.co.uk/home.htm
Knights - http://www.users.zetnet.co.uk/knightscb/
CB Shack - http://www.cb-shack.com/index.html

A great source of CB and radio links is
http://www.dxzone.com/
It lists sites all over the world and allows searching by keyword.

Also, I have a site at:
http://clik.to/brainbuster/
which also has links to other sites, including UK ones.

There is also a UK newsgroup (uk.rec.radio.cb), with the rules and details
being available at:
http://www.usenet.org.uk/uk.rec.radio.cb.html

If there is anything specific, you can always ask on the group. Although UK
specific questions may get more helpful replies on the UK group, this group
has some good "techs" for technical info.
There are also groups that you could subscribe to that work by e-mail (such
as "CB Tricks"), where the messages are sent and received as e-mails.

Regards,

Peter.

I didn't start this thread. And NO, I have't spoken to RH in 2 months as in
T A L K E D to him on'
the P H O N E as was implied by Lloyd. Now I have emailed him about the 45
Meter thing. He
may be out of the office; sometimes for 2 weeks at a time. He will answer
when and if he gets time.
OK? That's ALL I can do. I don't care what people "think" of me. I could
post around 25 or so
warnings to trucking companies here, but I chose not to. I didn't start
this thread, OK?

All it takes for evil to triumph is for good men to do nothing. And if you
think the licensed operators (not just me) are going to stand by and let the
"barbarians" overrun the city without a fight, you are quite mistaken.

Actually, it IS a good idea. Getting them up on GMRS, or MURS would be a
fine idea.
Just think; no racket and noise. Trucks could talk to each other with FM
clarity. It would
require a bit of courtesy, but would get rid of all that "skip". Awwwwwww,
we know what's
the objection to that. Tsk, tsk, they couldn't work DX or the "freeband", or
intrude on 10 Meters.

> Dave

Who said ANYTHING about taking away a driver's privilege to use a radio? I
believe the
illegal intrusion onto licensed spectrum is the topic here. Drivers have
the legal privilege of using
26.965-27.405. If they would do so, then you wouldn't be reading this
thread. But, regardless of
what those claim about the "lack" of such intrusions (and we know that view
is due to their vested
interest in keeping the status quo), truck drivers are roaming all over the
upper HF ham bands, particularly 10 Meters. This has GOT to stop. Truck
stops and shops are selling "bootleg" 10
Meter radios, such as Galaxy and Connex, that are not even approved for sale
in the USA--hop-
ing to use their alleged status as "10 meter" radios to get around the bans
on their importation.
IF those truckers would use their Galaxys and Connexes on the regular 40, I
don't think anyone
would notice. Not even FCC would fuss as long as they didn't draw attention
to themselves in some way. But NOOOOOOOOO! They have to roam all over the
spectrum interfering with
Amateurs, and THAT is what is the matter. By encroaching onto frequencies
allocated for others,
they have drawn attention to themselves, and THAT is what will cause other

laws, regulations, and
stricter enforcement to fall upon CBers. The wheel that squeaks loudest is
the one that gets oiled,
and this wheel IS going to get attention.

America works when its citizens respect the FEWER laws already in existance.
But when a segment of the population decides that they are going to ignore
the rule of law to the detriment of
another group of citizens who ARE abiding by the law, then that is when more
laws get passed.
The truckers are bringing this upon themselves and will, unfortunately,
likely draw attention to, say,
freebanders who are NOT encroaching onto the ham bands. The simple truth
is, the people who
are adversely being affected by this illegal activity are NOT going to stand
for it, and something
WILL be done to counter it. The question still is, what.

Tell ya what there Oxygoof. Here's what you do.
Take your fat butt over to the nearest interstate truck
stop. Go into the area where truck drivers set around
and talk or eat. You get up on a chair and say, "Hiya,
I'm Oxydol, and I'm gonna see that you truckers don't
use the wrong radios and freqs., and this here vigilante
arm band that Riley gave me gives me the right to get
you fired from your jobs, the jobs you guys and gals have
to feed your families. " After you do that, report back
here with what happened. We would particularly like to
know if the truckers, errrr, gave you an "attitude
adjustment." Now go run along asshole, and PLEASE,
get a life!!!!!!!!!!!
Oh, and Riley did say you are basically a little pissant
whiner whose always crying about insignificant bullshit.

Don't know anything about that. I rarely use an HT and I don't own a pocket
protector.
But I'd betcha that, opposed to the guy in the rusty '75 "Pony-ack" going
FOOOMP, FOOMP,
FOOOMP, the HT guy would win in the image department. Besides, those guys
don't wear
those call-sign hats except at hamfests--at least, I don't run into 'em.

> can anyone help me out

All I have on a TRC-431

RF Power output adjust L910
Modulation adjust VR7
RF Power Meter adjust VR5
S Meter adjust VR1
AM Squelch adjust VR3

3111. Re: We won't get the real facts from Skippy, that's for sure.

Awww, did I hit a nerve, Aanal Aaron? You never answered any of my questions, including: "Who's Steve"? You're a one-trick pony that forgot its' trick.

When ya gonna post that "proof" you offered to post "Gladly"? Haven't seen it yet.

You mean he could give YOU a run for your money, don't you Aanal
Aaron? How many addresses have you used and lost recently? Oh yeah:
Who's Steve? A friend of yours?

old chuck at chuck's two way......use to sell amps to all the cbers
out there....now he is a general class ham and says we shouldn't have
amps.....my, my........matter of fact chuckie left this newsgroup a
while back and said he would not return....i knew then that he was a
liar.........and that is that......

That is correct. Yahoo or Hotmail won't
do anything unless he send unsolicited e mail. But Google closes them all
the time because of his posting violations.

Then how come you're so concerned about "posting violations"? That
sounds rather "anal" to me....

Nothing boring about the FRN. It's been a very useful site since you
were forced to leave for causing trouble and slandering people. And
just sos you know, theres only 1 administrator on the FRN. The owner.
He has a couple of people acting as moderators to keep things in line.
I've lurked in the UseNet groups for years, bobbie-girl.

Excuse me, "Bobbie-girl", but if the claim against you was false, why
was your account cancelled? And what makes you think I send it?

You've been on the usenet for years, bobbie-girl, and anybody can do a
search to prove that. Just search for Radio Bob and/or rbcn1.

Still jamming the ham repeaters in Cornelia, GA?

TROLL!!

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

This just in....

I've received a story from a friend in India who claims
he has photos of stone walls depicting men using devices that
look very simular to two-way radios. The stone tablets date
back 2000 years.

Could the early egyptians been equiped with CB's?

Did they have amplifiers? Moonrakers? Echo mics?

Would not it be cool if they found 2000 year old CB radios?

And they still worked?????

> Not quite Bullis.... but bad enough.

hmmm.....you know about voobnutts in misc.transport.trucking
.????.....interesting.....isn't it strange that dwight
stewart(W5NET) used to post in this newsgroup as well.....my o
my....isn't that a coincidence..?????
so voobnutts starts a thread where he has been before.....perhaps it
would probably be a good conclusion that most if not all of the people
on this newsgroup have never been to the
newsgroup.....misc.transport.trucking.....but voobnutts and
stewart have.....astonishing parallel for a hard core ham radio
techician class who has a lot of time on his hands evidentally for
arguing about this and arguing about that.....7,300 posts on
rec.radio.cb since his inception....for aaron h voobnutts.....dwight
stewart has over 5,000 posts to rec.radio.amateur.policy alone since
he first appeared on the scene....800 posts to the macitosh
newsgroups.....and of course , let us not forget....over a 100
posts to misc.transport.trucking.....

conclusion.....Aaron H. Voobner is: Dwight Stewart
(W5NET).....

Alan I believe they are real I hear the CW stations in there plain as day.
So your not a ham and have no axe to grind what will the naysers say to
these mp3's which clearly show the usage by trucker types.

And at which point do we stop sharing? How many truckers and other
illegal ops to we allow on 10 meters? Do we stop when they have
turned 10 meters into the garbage band that 11 meter is?

> They'll say that "everything you get comes by truck" and "you ought to be
> careful about" rainin' on
> the truckers' parade. Among other things.

Yea, we've heard that old worn out song a million times, still
doesn't justify their illegal use of 10 meters.

Nope. I was named after a medical doctor. With a rather rare name I
don't have to look up every time somebody calls out John, Dick, Harry,
Bob, Tim, etc...

It's a new model introduced at the Dayton Hamvention last May. It's
the replacement for the ATAS-100. The new model fixes some of the
short comings of the older model.

Not likely unless you contact one of the mail order Ham equipment
vendors, and have it shipped out overnight. I would consider it for a
long term solution however. It makes a nice match for the FT-100,
FT-100D, and the FT-847 for an automatically tuning screwdriver
antenna.

It is really funny how outlaw CBers like Tim forget so quickly how a
bill recently got passed, and signed in to law, allowing local Police
to enforce Part 95 rules on the behalf of the FCC. If he thinks that
Hams can't swing something like I proposed, with the DOT, he better

think again, and worry. The proof it can be done is right in his face.

You mean the TWO VX7's right? It was interesting to see them light up
when you key up on the frequency they were set on, while under water.

> You and your friends must have very selective sight!

They disappeared becasue RH was paying a visit to the Hamvention the
year before, and the amp kit vendor got told they better not show up
again, the kits, by the field agents. All one had to do was stop by
their table and ask them about their visit from the FCC. Several
people wanted a kit and wanted to know why they weren't there any
more. There may have been other amps elsewhere, but they were NOT in
the tent area anymore. Even some of the CB shops with tables had their
"questionable" wears gone that year too. Seems like the word got out,
and nobody wanted to get busted.

They'll say it was recorded on Channel 19, or the freeband (CW nonetheless).
They'll say it is not
a problem. They'll say the truckers are not hurting anyone. They'll say
the hams ought to "share".
They'll say that "everything you get comes by truck" and "you ought to be
careful about" rainin' on
the truckers' parade. Among other things.

Gee whiz cheesecutter, you're right...I am cross-posting. Guess I'm
just not paying attention when I reply. Please don't toss me, I love salads
but just not in them...knowhutImean?

Now, just what is a " bad apple ham? " Is that a apple ham that has
gone bad? I love ham, eat it every chance I get. Every try a honey-baked
ham? They are delicious but expensive. I wish there was a honey-baked
ham store in Red Bluff. That's where I live, Red Bluff, a small town with
no honey-baked ham store but we just got a Starbucks so things are
starting to look up.

Well, I gotta go now, still got 3 more linears that need my " special "
attention...heh heh heh.... I'll be putting all 3 of them on Ebay as long
as Ebay doesn't bounce me ...

Toodles....

GJJ

I also seem to recall that many folks, even regulars here, said that "It's
un-Consti-too-shunal" and
"They cain't do that", but it DID pass. It's a law that I think has been
basically a "feel-good" law
that was designed to appease the complainers and keep Congress from spending
any more money.
But all that was BEFORE 9/11. Amateur Radio has some pretty good press in
Congress right now, despite the naysayers, and this is the time to strike
with information about the 10 Meter problem (I already have been doing so)
and implement some of the suggestions that have and will
come in. There are lots of good ideas that can be put to use to get the
truckers out of 10 Meters.
Even a good publicity campaign on the part of ARRL thru and to truckers'
associations and large
trucking companies could make a dent. If the safety directors of the big
companies were to be
made aware of the problem, then they could make it a company policy that
only FCC approved
equipment would be allowed in their fleet; any illegal equipment would be
cause for discipline. Some of the truck stops have already been warned or
fined, and some are about to get it again.
I hope the agents make the fines stiff enough to make the sale of such crap
unattractive to the
companies. Even volunteers could write letters to trucking companies and
make them aware of the
problem. We haven't even begun to scratch the surface.

The poor guy just want to talk 5 miles out. The problem is there are TOO MANY experts trying to show their shallow limited knowledge of RF. What's with YAGI, DIPOLE and all of this BS?
1) His mother is 400 feet elevation up from him. This alone should be enough for LOS at 5 miles. 5Watts HT is not a problem here.
2) If external antenna is a must, a couple of quarter wave spikes built out of a coat hanger will do the job.
Yes I am a HAM. And with us HAMs we experiment, that is why we think outside of the box. HAMs earned their license, GUMMERS buy theirs. GUMMERs are basically appliance users, they tend to complicate things when not need be. Ever heard of using a sledge hammer to squat a fly?

Golly, Jean, thanks for your pearls of wisdom. I'm sure we all appreciate
your sharing your years of experience with us. Uh, well, months of
experience. Months and months.

Just be careful where you squat those flies, though, hon, whatever you use
to do it -- you _really_ think outside of the box. :->

Source record: 142008

"Legit" manufacturers who make HF linears are technically a bunch of criminals when they make amps which can be modded for 10m... all it takes is one op to buy the amp, get the mod & pass it around. Makes me just want to **CRY** for our poor old laws whose feelings are being hurt.

Guy Richards

Those mentors must be named Aanal Aaron or Georgie-girl! Aanal Aaron
did encourage one guy to get his new amp modified for CB, after all
(it's in the archive). And Georgie-girl does everything he can to
encourage CBers not to become amateurs.

What's your point, Aanal Aaron? Everybody does know my name: It's
Richard. You are so far out on your "Steve" limb you don't know you're
falling on your face.

And you still haven't answered my questions: Who's "Steve"? Where's
your proof? Why are you so desperate to hide the truth?

Yo, self appointed net cop, you are asking the wrong person. He, like
you, pushed the reply button and replied to the message without deleting
all the other groups. If you have a problem with the cross posting go
back to the CBer who posted the original message.

Next time do the rest of us a favor and just reply in your own group and
don't waste the bandwidth of the other groups with your whining.

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

Ya, you're probably right. It would be difficult to get existing radios
out of the hands of the guys that have them.

It's kind of an eye opener for me. I didn't know there were so many guys
on 10. My buddy is able to record them at will at pretty much any time
during the day. This was kind of a small sampling. I thought about
posting more, but it seems like it might be overkill.

Personally, I don't know why anybody would want to leave the regular 40.
I never have a problem finding a clean channel to talk to somebody on
(noise from skip notwithstanding). It's even better when I use sideband.
Does anybody else's mileage vary? Why do people feel the need to leave
the regular 40? I've never found it necessary.

Something else...I've been checking prices on some of the export rigs.
WOW. I don't get it. They're really not that hot, IMHO. I mean, (and I'm
not condoning this, don't misunderstand me) if you're gonna run illegally
do it with some style. When you get busted, at least you can tell the FCC
field agent "Ya, but this sure is a sweet rig, eh?". Heh. I can't believe
what some of these guys spend for radios of questionable quality. I
dunno. I guess it an availability thing. An export radio sitting on the
shelf next to a CB at a truck stop that costs a hundred bucks more and
looks just like a CB is sure to snag a sucker, I suppose.

Oh well. I'll get off of my soapbox. I hope everybody is getting a kick
out of the mp3's. Say, do you dialup guys dig the quick downloads? If so,
you're welcome :) I encoded those mp3's with LAME. LAME kicks ass. Check
it out at http://www.mp3dev.org/mp3

To the joy of many, but to the sadness of many more, this sacred plant, which has done no harm to anyone, which hasn't caused a single injury or death (unlike Ephedra) has been drafted onto a bill October 10, 2002, asking to make it a Schedule I substance. This action was the result of a vender advertising irresponsibly in a Rockland County newspaper for 2 years straight. This does NOT mean that the scheduling of Salvia is imminent. Mr. Baca has HUNDREDS of bills that he has written that are still waiting to be heard. Either way, even if our store has to close, our website will always remain here for reference, information, and as a testament to this extraordinary plant.

Goto www.iamshaman.com to buy enhanced Salvia Divinorum leaf.

Hi Jamey, My name is Woody Parr and I'm up the road in Cornelia. I'm afraid that I'm indirectly responsible for this troll who is badmouthing you at alt.religion.urantiabook. You see he was only there in the first place to attack me.

This idiot is Steven J. Rogovich, 1612 Lake Christopher dr. Virginia Beach, Va. 23464 He followed me to the UB usenet page from alt.radio.pirate He and I (were) both formerly loosely associated with each other in the shortwave pirate radio listening hobby. I USED to be a shortwave pirate but my station has been permanently retired for more than 2 years now. Stevie is still a pirate and is the operator of the station Radio Free Speech. He is also the moderator of a message board at the Free Radio Network < www.frn.net > and goes by the handle of Pat Murphy there. I had a falling out with the people at the FRN a couple of years ago as they became corrupt and were doing so inappropriate things. I dared to open my mouth and openly complain about there stupid activities which since they havn't yet ceased to follow me around the internet anywhere they can and attack me.

Steve is also on the usenet trolling people under the name of Richard Cranium (richardcranus@yahoo.com) He's far too much of a coward to debate anyone using his real name.

And as I pointed out Tim its time for the DOT to regulate what kind of
rig goes in to those trucks. PMRS or GMRS radios don't have the
problem, skip noise.

Dump the AM CB's and use the FM GMRS or PMRS rigs. The skip noise
isn't going to sound any better no matter what AM rig is used on 11m.

The DOT regulates everything else having to do with over the road
trucking. Banning 11m or 10 / 11m export radios is easy.

Just a thought. The argument is that it isn't being used. I suggest the hams buy diesel cars/truck and simply visit the truckstops and siphon off 20 gallons of fuel at a time. Heck, the driver isn't using the fuel! Here are the arguments.
1) driver - I paid for the fuel
1) ham - I paid for my license in time and money. I paid for the legal equipment to enjoy my hobby.
2) driver - I will need to use that fuel.
2) ham - I may have wanted that frequency and will in the future.
3) driver - you're stealing!
3) ham - and you are doing what?

This, of course, can go on and on ad nausem. So, guys, do what they do - go help yourselves, they don't care!

And two truckers a few yards apart on the Interstate can squelch
out all the skip noise and still hear each other just fine. Even
running 4 watts just a few yards apart it would be hard for any
skip signals to interfere with their conversation. So as usual,
timmyboy's reasoning is flawed at best.

Nice Job Chris, you are serious about your radio. Very creative setup your home away from home. Few ideas for you to try if you havent' already. APRS, will lets us keep an eye on ya (lol) also packet get on Internet via gateway and that truck will never be out of touch with the world post to the group etc, knowing you from your setup you already have that ytaken care of though. Anyhow your setup looks good.

If you read the captions under the photos, APRS is on the way, when I
decide on a GPS unit, and get a laptop for the truck..

as for packet, it's too slow for internet.

The mod is really no different for any of the tube type amps you change the
location on the tap on the coil, It doesn't really need passing around.

Chris, as a trucker, cber, and ham do you here illegal op's on 10 meters
that may be truckers? I am asking you since you probably drive thru a few
states and you have no axe to grind your all 3. Just want an honest opinion.

I don't want most Cbers becoming hams because most lack respect for rules on that band so why should they suddenly gain respect for them because they have a ham license? And what do you do? What's your claim to fame, oh nevermind I'll just ask aaron.

Yes, I do hear them.. And I kindly remind them at the truckstop, when they stop, that they're trespassing where they're not licensed. They, of course, ignore me, chuckle, and go on doing it.

So when they're caught, they'll wish they'd listened.

I think Leland's idea has some merit. Moving these guys to VHF might
take some time, but in the end they'll have a better communications
capability and a quieter set of channels to work in. If they keep
operating illegally, the frequencies they are using on 10 meters will
eventually fill up with hetrodynes and become noisy and unusable, much
like channel 19 is, and they will have to move on anyway.

> fellow drivers as well
>
Good points. I got to wondering about finding a clear place to chat with other drivers on, so here's what I did just now (10/27 12:25pm):

I went out to my car to take a little snapshot of how the band is doing (at least from my perspective around here). First, a little note about my equipment:

****
Galaxy DX959, bone stock.
Wilson 1000 mag mounted smack-dab in the middle of the roof on a Neon.
Location: Delhi, CA about a mile from SR-99.
****

I took note of how much noise there was on each channel (AM), and how many s-units showed on my Galaxy. I have excluded those channels where I could clearly hear people conversing.

1 s-unit : 18,31,34,39
2 s-units: 2,3,4,12,24,25,29,32,33,35,36,37,38,40
3 s-units: 1,7,9,13,14,16,20,21,22,23
4 s-units: 8,10
6 s-units: 5
8 s-units: 11,15,19 (Interesting)

Channels where I could make out somebody having a conversation include 6,17,26,27,28, and 30

Now on to USB. The following channels were clear enough to talk on (less than 3 s-units worth of noise), and many of them were totally dead: 13,16,18,24,29,31,32,34,35,36,37,39

And for LSB:
1,2,3,8,12,25,29,31,32,35,36,37,39,40

LSB was VERY quiet on most of the channels mentioned.

The point I was trying to make is, is that even with alot of skip noise, it's really not that difficult to find a clear channel to converse on - particuarly if you have a sideband rig. I don't see a need to leave the regular 40. Is there an area of the country where there isn't a clear channel on AM, USB, or LSB? It can't be impossible to find a clear channel to talk on. It might take a minute to hunt for one, but I'm sure drivers could find one.

I ran this by my dad (who is a trucker) and he doesn't see what the big deal is either. He's always able to find a clear channel in the regular 40.

Is my little test scientific? Conclusive? Naw. Hardly. Those of you with nicer base installations will hear alot more than I did. I do think it shows that it's not that big of a deal to find a clear channel to talk on without venturing into 10 meters (or anywhere else, for that matter), though.

3239. Old Panasonic CB Peakable?

Newsgroup: rec.radio.cb
Date: 2002-10-27 21:20:05 UTC
From: David <alsoSPAMbikerdave@bluefrognet.net>
Message-ID: <aphla701399@enews2.newsguy.com>
Source record: 141919

Hi folks, I bought an old Panasonic CB RJ-3250 on Ebay and I was wondering if it could be peaked and tuned. It looks to be from the late 70's, has 2 seperate meters on it...40 channel rig.I was told by a certain CB Shop in Erie, PA that I'm unhappy with that only Cobra and Uniden radio's of late can be peaked and tuned, I have a hard time believing this though. He said it was a myth that older radio's could be turned up nicely because they're were less CBers out back then and therefore you could talk farther. I don't understand what ythis has to do with peaking and tuning using meters...what does the amount of CBers have to do with this? Does this sound fishy to anyone else other that me?

Thanks,
David

This gentleman's idea of using FRS, MURS, or the like is a very good idea.
Some of what they like on HF, may be lacking there, but it is a good idea.

>8 s-units: 11,15,19 (Interesting)

since 19 is the trucker channel and the one to listen too if your trying to hear road reports and such you can surely understand how anoying it can get having to hear around s9 of noise on a daily basis. these drivers meet up on 19 and likely tell each other to go "two up" as dick used to say and end up on 28.085 on accident just because its so silent.

>LSB was VERY quiet on most of the channels mentioned.

its likely your radio is a little low on frequency if your LSB is alot quiter than the USB mode

what he really should have said was you will get no aprecciable gain from tuning and peaking it wehn its working fine. what he should have did was find info on the radio and realign it which it surely needs after all this time. the shop sounds like it sucks. he's liable a newbie tech that only has info on cobras and unidens since there mostly both the same radios inside anyways. leave that shop alone.

A gentlemen's agreement. Seems some folks want rules to apply between channel 36 and 40 and ignore the rules everywhere else. The reality is that SSB is much more conservative of bandwidth. If there were no am stations, you would approach doubling the number of channels available (true, some LSB stations would be occuping much of the USB portion and vice-versa, but it would alleviate a lot of crowding). 40 channels is a lot for what was intended as a short range communications system (perhaps 10 miles or so). Only in very dense urban areas would one have a problem.

73 from Rochester, NY

The teamsters didn't help much when they banned radar detectors. No one is
proposing that
truckers be denied the use of a radio; just that they be prevented from
using illegal equipment on
frequencies for which they have no license.

Id be willing to bet the bootleggers had some serious trouble operating above 28.3 this weekend...it was wall to wall with dx and stateside contesters. Heard a couple feeble attempts at a AM qso by a couple of truckers around 28.320 or so. They didn't last long.

This is what we need guys and gals...Utilize ten meters and dump on these fools.

Dan/W4NTI

Nice setup Chris, but why are you posting pix of your mobile
station setup in a Citizen Band Radio newsgroup?

Don't tell me you're also a freebander too, putting your hard-earned
extra class ticket at risk for cancellation when Riley hears you?

I seen it happen, hams who use their real call on the ham bands
then switch over to the " freeband " and believe it or not, STILL
use their ham callsign..... stupid, stuipid, stupid......

I say duh.....they say huh? Riley, he say " You're BUSTED! "

<SIGH> & your point is?

Soooooo... you rocket scientist's have come to the brilliant conclusion
that because this person or the handful of people who have been taped used
those freq's spoke like they did.......means that all drivers do?

That'd be like me saying that since one of you big strapper radio fella's
was stupid enough that while putting up your antenna you got fried..... all
of you fella's are just down right stupid.... right?

Jerry The Troll made no reference what-so-ever to _ANY_ recorded message or
anything else that makes you people sprout wood, when he posted his
bullshit. He was trying to create some kind of come back when someone summed
him up as a crybaby.

3274. Schematics and tech info needed for old tube CB's

Newsgroup: rec.radio.cb
Date: 2002-10-28 02:54:46 UTC
From: Ed - VA3ES <va3es@rac.ca>
Message-ID: <Il1v9.766$qD2.208078@news20.bellglobal.com>
Source record: 142056
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb

Hi All;

I'm in the process of restoration and 10M-conversion of three tube-type AM CB radios:
The first is a Pierce-Simpson "Guardian-23,", and the second unit is a "Cardon Spitfire", (which is identical to the Robyn T-123, and very similar to the Kris 23). The last is an oddball - a Canadian made "Chisholm GRS-1566"

I'm missing schematics and other technical info for these radios. There is suitable info in Sams CB series CB-35 (Robyn T-123) and in CB-8 for the Guardian 23. Would anyone have either of these Sams books, or any schematics/service info for these rigs? I'll gladly pay for copies of the technical info.

Thanks, and vy 73,

Ed, VA3ES

No, of course not all hams nor truckers are whatever. In fact, the post I made earlier concerning siphoning fuel from truckers was harsh (and drew exactly the response I expected) - the problem is the easy availability of the radios. Kinda like the gun laws. Obviously, we have the right to bear arms, but when you get a fruitcake like the sniper, it will tend to bring out a lot of harsh words. The fact is that 10 meters is an international amateur band and more than a few hams don't care for intruders. Funny, no one wants to build export radios for 88 - 108 MHz FM. Gee, nice and clear up there too. I wonder why they don't ....

Thanks, JJ..

I spent alot of time, alot of thought, and a little money on the antennas. They prove a point I've been trying to state for quite some time, that not many have listened to.

It doesn't take an amp.

It doesn't take power.

It doesn't take overmodulation.

It takes an efficient antenna.

No, GJ...

I posted them for two reasons.

1. If you'd paid attention, there's a CB antenna on there, too.
2. I was trying to make a point that you'd obviously missed. It doesn't take big power to get out, and it doesn't take an overmodulated splattermachine. It takes a good antenna setup.

hope that fills in the holes.

> you forgot to quote the part where he said it was nothing more than a
"feel
> good law" to make you guys be quiet.

Nope. It was a "feel good" law to get their constituents off their backs;
IOW, so the Congression-
als could say that they DID something about it. It was a classic passing of
the buck. The only way
for them to've really addressed the problem was to find funding to permit
FCC to do the job. Still,
that very law, in and of itself a failure to correctly address the problem,
could be used as an example and an object lesson that more and different
things need to be done. In one sense, the
situations, while involving CB operators, are different. PL106-521
addressed high powered, gen-
erally localized base stations within cities and counties that were
interfering with home entertainment
equipment, etc. Here, we are dealing with a group of truck drivers who are
operating out-of-band,
and those who flaunt the law by selling contraband equipment. That, IMHO,
takes a two-pronged
approach; hitting the dealers with VERY stiff fines, and going after
truckers, even if temporarily, at
weigh stations by FCC agents or state DOT officers. First, however, there
should be a publicity
campaign to alert trucking companies to the problem. IF told about the
situation, most Safety Dir-
ectors and line managers would probably take steps to rid their fleets of
illegal equipment, or discipline drivers that insist on operating "export"
radios. Even volunteers in the ham community could take on the task of
alerting companies to the risk they face. After all, most supervisors are
pretty good about issuing "memos" and directives.

Was not attacking you sir, I was only concerned that your desire to
be accepted by those who enjoy breaking the laws by using illegal
amplifiers and transmitting on non-cb frequencies to be profoundly
anti-amateur in spirit and in the best interest of the hobby.

But maybe your real reason is to attract new members into the ranks
of ham radio. I'm sure your equipment is 100 percent legal and in full
compliance of FCC rules and regulations. Being so, you should be
congratulated for doing something rather then sitting by and complaining
as so many of our brethren would rather do. You are in a position to show
Ham Radio in it's finest glory with your fascinating rolling ham station.

Relevant? My point was 1) there is a problem. Yes, some truckers and some radio shops have been popped.

2) the fact that some have been busted tells some of us there is a problem. Jerry just gets vocal about it, but doesn't spam with some of the sexual innuendo that the anonymous posters do. At least give him credit for saying what he thinks without hiding his identity.

I note one gentleman didn't care much for my idea of siphoning fuel from trucks. Can't say that I blame him, but you can't blame Jerry either for being vocal about siphoning frequencies.

To say that all truckers are doing this is just as stupid as saying all CBers run illegal frequencies/radios. Not true. The point is that once you hit 28.000, there are going to be some folks that get upset. As I suggested earlier, try running a couple of hundred watts between 88 and 108 MHz on FM. A lot of nice and clear spots up there, plus the antennas are smaller (plus you can get a gain antenna). Somehow I think you'd get some other folks upset if you did. Unfortunately, when CB was created back in the 50s, UHF radios were **very** expensive. 30 MHz was about as high as one could build a relatively inexpensive radio with any kind of performance and 27 MHz became the place to go - along with F layer propogation at times during the sunspot cycle. Beyond that, sporadic E occurs quite a bit as well. None of the flames would be occuring if CB was up on high band VHF or UHF. MURS can offer good communications essentially without interference and likely offer more local range than a stock cb can; unfortunately, if all of the cb community tries to move there, there won't be enough channels. That said, 10 meters is NOT an extension of the cb band.

Close, however, Tim. The hams have time and money invested in their ticket. The frequency can be reused - but when? Perhaps the best suggestion is choose a frequency that you can have a gain antenna plus very little interference. May I suggest 88 to 108 MHz fm? As far as cost, look at the blood pressure medication that a few of the hams are taking over this thing.

The CB antenna works well, with the Grant XL

The HF antenna works great.. .I get great reports on the nets, and the fact that I'm heard, running only 100 watts, as well as those other mobile stations running a kilowatt or more, on whatever antennas they're using.

I'm not saying I won't try a screwdriver antenna in the future, but this works well for now.

Don't pretend to know what I'm thinking. Also, don't pretend to know what you're thinking, because apparently you're not thinking the way I'm thinking. My posting had nothing to do with acceptance here. It DID have something to do with me showing what an efficient antenna setup for HF, CB, and other bands, could look like. I'm proud of the time and energy I've put into my setup, and I wanted to show off a bit.

> But maybe your real reason is to attract new members into the ranks

I don't think I've ever had my ass kissed quite this way. Next time, keep your tongue to yourself. ::shudder::

In the future, please do me the favor and keep your assumptions about me to yourself. Better yet, make no assumptions about me. You don't know me well enough to even get the faintest idea of what I may be thinking at any given time.

As for demonstrating the hobby, I gave away three of Gordon West's Technician study books last week to drivers who were interested in HAM radio after talking to me on the CB about my goofy antenna setup. What have you done to further the hobby recently?

> using 10 meters illegally talk/

Perhaps _YOU_ need to listen to the recordings on that site !!

Okay... after listening to the "incriminating evidence", here's my findings.

#1 -- Some guy bragging about "if you can't back it up"... more then likely, he's referring to someone out there that thinks that their radio is stronger then him.

Absolutely nothing was said in reference to trucks or truck drivers !!

#2-- Some guy talking about vacation... overtime... & sick leave. This eliminates almost all of the trucking industry except maybe the teamsters & a few others. The majority of the trucking industry is paid by the mile or load. _NO_ where do they say they drive a truck !

Absolutely nothing was said in reference to trucks or truck drivers !!

#3 -- Two guys & a lady talking about the price of cigarettes & ex's, sounded more like some people on bases chatting.

Absolutely nothing was said in reference to trucks or truck drivers !!

#4 -- One guy say's something about another guy hiding paper towels & toilet paper "back here"... "that's where all of it goes 'cause it never makes it up there to Ft. Smith".

Absolutely nothing was said in reference to trucks or truck drivers !!

#5 -- No sure what's being said here.. something about something where someone's at & anther fellow says something "That corn had some good thickness to it".

Absolutely nothing was said in reference to trucks or truck drivers !!

#6 -- This one I can't make out much except the "panty" part.

Absolutely nothing was said in reference to trucks or truck drivers !!

#7 -- This is a fellow asking someone where they're at in Montana.

Absolutely nothing was said in reference to trucks or truck drivers !!

****

My thought's are that someone's full of crap, there is not even a slight mention or even an inkling of truckers being involved, just more stereotyping. Every conversation on that site could have come from a base with a radio that's been modified by almost any CB Hacknetion.

I agree with your basic point. The original poster was looking to see if he could set up a simple communication system using GMRS radios so he could talk with his mother. A classic use of GMRS.

Since he cross posted to the CB newsgroup it appeared that having a large antenna setup as required by CB was not going to work. Unfortunately, he never got back to us, I'm not sure how helpful the reply posts were. We can easily get caught up in pitching a particular brand, and/or a radio system and overlook the original question.

Hopefully he was able to make it work.

From amateur radio newsline....

RESCUE RADIO: HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men
wanted in connection with the sniper shootings in the Washington DC area. ABC
News interviewed the trucker who called the police to report he had spotted the
two suspects. When asked how he heard about the description of the vehicle,
his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is
Dale Sommers; callsign WB6OM. Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station. His show is mainly
music and information of interest to long-haul truck drivers. The description
of the wanted men was just that. As a result the pair are in custody thanks to
a trucker who was paying attention to what WB6OM had to say as Truckin Bozo over WLW in Cincinnati. (K7JA)

The trucker who made the 911 call was given his due, but now it seems everyone needs to get in on the act, LOL. Let's hear it for the State Police and SWAT too while we're at it. It's a bit silly, but as long as the snipers were caught, it's all good.

But wait....there is a little tidbit of useful info in this report. Dale Sommers (a ham) has a clear channel AM radio show LISTENED TO BY LONG HAUL TRUCKERS. It appears to be a perfect opportunity to get the word out to drivers about illegal 10 meter operation. All it would take is a note to Dale (I bet he's listed on QRZ) explaining the issue, the assumption that many truckers don't know 10 meters is not cool to operate on, and how he can help. It's worth a shot.

Could be the tablets date back 2000 years, most rocks do have a "history". But it could've been a "recent" scratching of Osama Bin Laden! To some, he may "appear" as Jesus Christ. Bin Laden has been seen using some sort of 2 way device, be it CB or Ham.

Jesus? I think someone's been hitting the hard stuff again.

And that is a matter of perception. Whether by fault of your reading, or the fault of your newsreader, mixing up pieces of serveral different people's words, you have lashed out or have made incorrect assumptions, based on nothing more than a simple statement. That may be, to you, a "provokation", but from the perspective of the other party, it wasa straight up comment.

> That is where you guys start getting out of hand and losing your temper.

I don't understand how you can defend a position, such as illegal freebanding, without feeling the need to explain it. Why should you be allowed to disregard the rules? And why should the rest of the law abiding people, be forced to just accept it.

> The fact that you, yourself feel it, is not sufficient evidence. And

> will all become a moot point.
> <
>
> Lawmakers have nothing to do with my behavior. Like I said before, you
> have no clue whether I break the law.

You operate on freeband, by your own admission (Your words can come back to haunt you too). That is breaking the law. I don't think it could be any plainer. So are you are lawbreaker or a liar? But many on here have compared illegal freebanders with the early revolutionaries, who

"bravely" defied the law, in order that we could create a better nation. So if you want to be compared to "revolutionaries" rather than petty lawbreakers, then you need to have an ultimate goal. The logical goal would be the elimination or changing of the radio laws, that restrict you legally, from doing what you do now. That's what I meant when I said "make your case to the lawmakers".

> Like I've said before, many times, I don't mollycoddle people. I don't

You do realize that by calling someone a liar, or even implying such, that can be considered inflammatory? Especially when you have no evidence to prove it.

>

>
> You are lying again, Dave.

There you go, making inflammatory comments. And you wonder why people attack you.

> You have attacked me with personal comments many times.

Not until it became obvious that you either couldn't understand the concept I was elaborating on, or you were deliberately spinning my words to fit your own interpretations.

> Go back to our very first disagreement in this forum,
> Dave...you came off like a dick

A subjective opinion. Whether I was truly being a "dick" or just that you didn't like what I was saying, is a matter of interpretation. Like to old saying; "if you don't like the messsage, don't shoot the messenger".

> for no reason other than me stating an
> opinion you didn't like, so don't spread that BS here.

I don't know. I've had other people tell me that they agree with me, and that you're just someone "looking to start a fight". And others telling me that I'm wasting my time arguing with you. Most of whom do not belong to your imagined "Twisty hate pose'".

One thing is probably true, though, I have damaged my reputation somewhat by allowing you to draw me into these no-win situations.

> Compared to some of the more "colorful" people here, I am mild.

> didnt have the azz for it.....hahahahahahahahha!

How do you know, out of a load of freebanders, who the "hams" are? You can't expect me to believe that they actually used their ham calls on the freeband?

> What "character flaws" have I admitted to, out of curiousity? I don't
> recall doing any such thing.
> <
>
> You think being a smug, disenfranchised, troubled youth are GOOD traits?

That was 20 years ago. Growning up and maturing from that stage gives me a perspective by which to gauge many other people. The old "been there, done that". I think that overcoming my earlier "flaws" has allowed me the opportunity to reflect on my own life, and gives me insight into what people think and why they think that way.

I really don't think you know what a socialist is. Otherwise you
wouldn't be making such a ridiculous accusation. Socialism is all about
government control. Following sensible rules and being considerate of
other people's rights, is hardly "socialism".

Who has "pledged to cause trouble". I know that is not my intent. If you
don't like your lawlessness being brought up, maybe you should do
something about it. You need to realize that the rest of the civilized
society does not view your radio crusade the same way you do. People who
have respect for the law, are not the ones causing the trouble.

I would disagree with that. You were the one that started with speculative comments, accusing me of lying, and commenting on my inability to follow your changing of the topics, and accusing me of deliberately steering the topic when I attempted to return to the core topic. That whole thread on respect on the radio, that you kept trying to change into a discussion of USENET ettiquette. It's all there in google.

Maybe
because hammie radio is more reliable as a cohesive service by virtue of regulation?
Go fight with yourself....no one ever stated differently. Jerry feels the need to repost the merits of hammie radio, as if someone were putting it down and he is defending it's use, but both of you are swinging at ghosts.
==========
JerryO wrote:
>Nope. Amateur Radio WAS being erroneously put down as evidenced in the re-quoted paragraph
from "tools" below. Also Amateur Radio is more reliable as a cohesive service, not because of regulation, but because of the discipline and dedication of the operators themselves. My response was to that which seems to be the "theme" of truckers who think that their "importance" justifies their use of any radio band they choose. Somehow their hauling of goods is supposed to make illegal activity fine and dandy. NOT!
Jerry<<

Check your posts,,,,you have interchanged the word "truckers" for "cb types" or "cbers" at your convenience to falsely and deliberately make it appear one and the same.....it is NOT!
If a freebander can't be defined as a cber, then neither can these drivers or intruders you claim. Can't have it both ways, Jerry, the hypocrisy kills your argument.

>

Let me guess, this "shop" also sells Cobra and Uniden radios right?

The real truth is that all CB radios can be aligned. They all have
variable inductors and potentiometers to set the proper values for
optimal operation.

Now, here's where there are some discrepancies:
Some radios can be "peaked" higher than others. Some can go to 5 watts,
some to 6, some to 7. SSB radios can usually do a bit more on AM. But
the downside is that as you increase carrier power, you lose modulation
percentage.

The bottom line is that even a jump from 4 to 8 watts of carrier power
will only give you about 1/2 of an "S" unit increase in signal, and
could cause your modulation (where your talkpower actually is) to be
less.

Once upon a time, before 40 channel radios, the FCC rated power at the
input to the final, at 5 watts. This translated (assuming a 60 - 70%
efficiency) to about 3 to 3.5 watts output. Because aligning to input
specs was difficult (You had to insert a current meter into the final
collector circuit, and calculate the power from the current and voltage
readings), the FCC revised it's specs to rate power at the output.
That's when the ratings became 4 watts output. This was actually a
slight increase in output power over what was derived from the old
standard.

It had nothing to do with "the amount of CBers" or anything else like
that. Tis guy at your shop is simply handing you a buch of guff, so that
you'll hopefully, dump that radio and buy one of his.

I guess you think every truck driver starts his transmission off with "Hey, truck driver here." I have monitored these illegal transmission for a number of years now and it is obvious to the most casual of observer that a lot of them are truck drivers. All you have to have is a little common sense to figure it out. Something you apparently lack.

Hi all,

I am not into the CB Radio stuff myself but my uncle gave me one a few years ago. I dont use it much because I dont have time.

I am thinking of selling it for some cash (what can I say I am a student, hehe).

What kinda price should I sell it for either in the paper or ebay?

It is a Harrior CB Radio, comes with main box, power supply unit, leads, proper big mic thing, a wee box with a needle in it showing something and the stand for an ariel (missing the long ariel bit).

Many thanks for any info you guys can give me :).

Mail me Richard@wasitgood4u.co.uk

Ok, if we follow that line of "logic", then it could be said that we all have the means to murder someone, and there are times in most people's lives where they may have contemplated doing it to someone, then are these thoughts actionable as criminal? I think you've been watching too many Tom Cruise movies.

Believe me, had I actually made the cell phone jammer, I'd probably be innundated with people wanting me to build one for them (I've already been approached). The sad truth is that there are many people (And the number is growing) who are becoming very disillusioned with self important "cell phone geeks", especially those behind the wheel.

I will admit to making a CB jammer a long time ago. A PLL sweep of about 1 Mhz, is usually good enough. Power output less than 100 mW, to conserve battery power. Very effective in plugging the ears of especially annoying CB sociopaths with delusions of granduer. It's especially funny when they realize that no matter how much power they run, it does them no good when they can't hear anything.....

dave, i've never sat around planning and wanting to kill somebody. i never said your thoughts were criminal just that your much more capable of causing harm then the ten meter intruders you loathe so much and you take that about as serious as the truckers on ten meter take there intrusions

>Believe me, had I actually made the cell phone jammer, I'd probably be
>innundated with people wanting me to build one for them (I've already

dont worry, thats what dave from davemade found to be true too but it makes him no hero.

>The sad truth is that there are many people (And the
>number is growing) who are becoming very disillusioned with self
>important "cell phone geeks", especially those behind the wheel.

just like there are many truckers tired of the base stations throwing dead keys on them, the loud skip noise on channel 19, and the ht toating geeks who keep trying to get them fired for talking on a two way in a spot there not licensed for.

your quick to criticize others while contemplating doing even worse things yourself. amazing how blind you are.

From: aa2qa@frontiernet.net (Jim Hampton)
No, of course not all hams nor truckers are whatever. In fact, the post I made earlier concerning siphoning fuel from truckers was harsh (and drew exactly the response I expected) - the problem is the easy availability of the radios. Kinda like the gun laws. Obviously, we have the right to bear arms, but when you get a fruitcake like the sniper, it will tend to bring out a lot of harsh words. The fact is that 10 meters is an international amateur band and more than a few hams don't care for intruders. Funny, no one wants to build export radios for 88 - 108 MHz FM. Gee, nice and clear up there too. I wonder why they don't ....
73 from Rochester, NY
Jim

A mod or two will do ya'!
There are a good many pirate stations alive and well in the US and they ain't all LPFM Ramsey kits.

3351. Re: 10 meter intruders - Another solution to the problem?

Newsgroup: rec.radio.cb
Date: 2002-10-28 18:40:46 UTC
From: twistedhed@webtv.net
Message-ID: <12122-3DBD84AE-315@storefull-2313.public.lawson.webtv.net>
Source record: 142135

First, however, there should be a publicity
campaign to alert trucking companies to the problem. IF told about the
situation, most Safety Dir-
ectors and line managers would probably take steps to rid their fleets
of illegal equipment, or discipline drivers that insist on operating
"export" radios. Even volunteers in the ham community could take on the
task of alerting companies to the risk they face. After all, most
supervisors are pretty good about issuing "memos" and directives.
Jerry
==========
Propaganda disguised as campaigns designed for publicity is a very
effective way to get your non-issue across. Good luck with it, as was
shown with the way the general public view hammie radio (they don't know
the difference between it and cb!!!) is the same way the public will
react to your disinformation campaign....with total indifference.
There exist no "hordes", no "masses", no "crowds" and certainly no
"throngs" of people being interfered with by cbers. The only ones who
give a damn are the angry few that lurk in here and need someone to
blame for their own cantankery, and the VERY few who actually get
interfered with...and since y'all have claimed that it's so simple and
easy to cw right over top of them..........there should be no problem
(according to your words).

Relevant? My point was 1) there is a problem. Yes, some truckers and some radio shops have been popped.
2) the fact that some have been busted tells some of us there is a problem. Jerry just gets vocal about it, but doesn't spam with some of the sexual innuendo that the anonymous posters do. At least give him credit for saying what he thinks without hiding his identity.
I note one gentleman didn't care much for my idea of siphoning fuel from trucks. Can't say that I blame him, but you can't blame Jerry either for being vocal about siphoning frequencies.
To say that all truckers are doing this is just as stupid as saying all CBers run illegal frequencies/radios. Not true. The point is that once you hit 28.000, there are going to be some folks that get upset. As I suggested earlier, try running a couple of hundred watts between 88 and 108 MHz on FM. A lot of nice and clear spots up there, plus the antennas are smaller (plus you can get a gain antenna). Somehow I think you'd get some other folks upset if you did. Unfortunately, when CB was created back in the 50s, UHF radios were **very** expensive. 30 MHz was about as high as one could build a relatively inexpensive radio with any kind of performance and 27 MHz became the place to go - along with F layer propogation at times during the sunspot cycle. Beyond that, sporadic E occurs quite a bit as well. None of the flames would be occuring if CB was up on high band VHF or UHF. MURS can offer good communications essentially without interference and likely offer more local range than a stock cb can; unfortunately, if all of the cb community tries to move there, there won't be enough channels. That said, 10 meters is NOT an extension of the cb band.
73 from Rochester, NY
Jim
==========
"Siphoning" freqs....? Ahm-a-gonna use dat one fo sho! "Twisted twisted and more twisted, siphoning these freeband freqs around the 'pile!"....yea......yea...catchy sound.
To compare intruders on the commercial band as opposed to semi-public (hammie bands) is too far removed. Using that example, "they" (commercial bands) have everything hammies don't as resources. The public (listens daily to commercial radio), endless supplies of money to throw to lobbyists, and blue-chip advertisers. And consider this isn't even cracking the ice, yet.

From: aa2qa@frontiernet.net (Jim Hampton)
Close, however, Tim. The hams have time and money invested in their ticket. The frequency can be reused - but when? Perhaps the best suggestion is choose a frequency that you can have a gain antenna plus very little interference. May I suggest 88 to 108 MHz fm? As far as cost, look at the blood pressure medication that a few of the hams are taking over this thing.
73 from Rochester, NY
Jim
==========
Jim, I have always maintained those who intrude on hamme freqs should get their just reward. But if it is as some claim, hammies have no problem working over these intruders. If this is true, the "problem "origination point needs closer examination.

Naaaah, screw politness, just remember to stick the pin in his coax so that
it
goes THROUGH the center conductor.

Even more fun:
Tie the coax to your rear bumper with some aircraft cable and take off,
and watch his entire rig come flying out the window, mic and all.

Did that once, and I still laugh about it twenty years later.....

>And that is a matter of perception. <

Well, then it's a dman good thing I don't take into consideration any one elses opinions, huh?

>Whether by fault of your reading, or the fault of your newsreader, mixing up pieces of serveral different people's words, you have lashed out or have made incorrect assumptions, based on nothing more than a simple statement. <<

That is simply a matter of your "perception".

>That may be, to you, a "provokation", <<

Stop using that kiddie dictionary.
My "provoke" is correct, your "provokation (sic)" is not, neither is your "serveral", since you have now stooped to playing and taking issues with typos that aren't even there....but that's ok, I'm used to you fabricating bullshit.

>but from the perspective of the other party, it wasa straight up comment.<<

Too vague. Post the entire post you refer to in it's entirety in context with the thread I was responding to....try to do so unedited.

>I have no problem with people who take a different view from me, when it involves subjective tastes and opinions. If I like Country & Western music, and you like Def Leppard, there is no right or wrong, just a difference of opinion.
<<

Bullshit. You have called names, hurled insults and called otherwise law-abiding folks "criminals" for espousing a view which you take issue with.
HARDLY a difference of opinion.

>But when you are talking about factual information, or defacto standards, if you take a position that is contrary to those normally accepted standards, <<

Facts and "normally accepted standards" are two separate entities with two separate meanings. they are NOT interchangeable..

>it's up to the opposing party to make the case why the standard is wrong. In your case, you need to explain why running illegally should not be considered criminal per the laws set forth by the FCC.
< <

No, I don't. I need explain nothing to anyone. That is where you guys start getting out of hand and losing your temper.

>I don't understand how you can defend a position, such as illegal freebanding, without feeling the need to explain it. <<

There is your problem....I needn't defend my actions, either...you claiming I defend it is more bullshit...I defend or explain nothing...there is no need...you have no authority, nor do the same pack of blubbering babies that cajole with you.

>Why should you be allowed to disregard the rules?
<<

Hahahhahah....why should "Aaron" be able to disregard TOS? Or Lelnad?

>And why should the rest of the law abiding people, be forced to just accept it.<<

See above.

> The fact that you, yourself feel it, <<

When did your mere guessing of how I feel become fact?

>is not sufficient evidence. And once you do that, make the case to the lawmakers, and hopefully this will all become a moot point.
< <

Lawmakers have nothing to do with my behavior. Like I said before, you have no clue whether I break the law.

>You operate on freeband, by your own admission (Your words can come back to haunt you too).<<

How is that "haunting me"? You can't have it both ways, Hall....either I speak the truth or not, but choosing which passages of mine to disregard and which ones to accept as truth is sorth of the same thing you are railing against me for...,,,

> That is breaking the law. I don't think it could be any plainer. So are you are lawbreaker or a liar?<<<

You have already made up your mind.
What I say shouldn't matter.

> But many on here have compared illegal freebanders with the early revolutionaries, who "bravely" defied the law, in order that we could create a better nation. So if you want to be compared to "revolutionaries" rather than petty lawbreakers, then you need to have an ultimate goal. <<

I don't care what I am viewed as.

>The logical goal would be the elimination or changing of the radio laws, that restrict you legally, from doing what you do now.<<

Seer.

> That's what I meant when I said "make your case to the lawmakers". <<

I don't have a case,, but you seem hellbent on giving me one.

>Like I've said before, many times, I don't mollycoddle people. I don't sugar coat my information. If what I say doesn't sit well with you, prove it wrong, or deal with it. Posting a contrary OPINION, does not automatically invalidate my information or my position.
<

Never said it did, but getting personal, lying, and making personal and OT comments about folks immediately invalidates your positon.

>You do realize that by calling someone a liar, or even implying such, that can be considered inflammatory? Especially when you have no evidence to prove it. <<

You proved it yourself.

Since I have pointed out your
misbehavior you have indeed reviewed your archive collection and the fact that you were repulsed enough by what you saw made you admit your character flaws .

>Wait a minute. Now you're starting to go off the path. I have reviewed some of my past posts. Mostly to see when I really started posting here. I see nothing especially inflamatory in most of what I've written.
<

Which is why they need pointed out every so often.....you fail to see them.

>Because they aren't there.<

(snicker) Okaaay! The group will believe what you now tell us and not what we see.

>In fact I try to make a point to refrain from emotional inflection as it clouds objectivity.
<

Since when? Last weekend?

>Since the beginning.<

Oh, the bEGINNING of the weekend, well, that makes a difference....

> Other than the last few "exchanges" that you and I have had, you will find that I treat people respectfully. I may not agree, and I will state the reasons why I disagree, and apply the principles of logic. But I

don't engage in namecalling. That's something kids do.
I am usually a straight up and to the point guy. I don't make personal insults, unless they were thrown at me first.
<

You are lying again, Dave.

>There you go, making inflammatory comments. And you wonder why people attack you.<<

I have never wondered that.....but you have certainly claimed plenty and attributed much to me that isn;t there .....

You have attacked me with personal comments many times.

>Not until it became obvious that you either couldn't understand the concept I was elaborating on, or you were deliberately spinning my words to fit your own interpretations.<<

Hhahahhah..you don't even remember..that's been shown.

Go back to our very first disagreement in this forum, Dave...you came off like a dick

>A subjective opinion. Whether I was truly being a "dick" or just that you didn't like what I was saying, is a matter of interpretation. <<

Insultive posts becaiuse of anothers views, ccnstitute being a dick.
Care to take a poll?

>Like to old saying; "if you don't like the messsage, don't shoot the messenger".
<<

But that is exactly what Lelnad KC8LDO suggested..

for no reason other than me stating an
opinion you didn't like, so don't spread that BS here.

>I don't know. I've had other people tell me that they agree with me, and that you're just someone "looking to start a fight".<<

What? Behind the scenes? In email?
From your named friends of Lenad, Dogie, and Frank? It figures you hold their opinions in contrast to what they are....mere interpretations.
You have just accurately described your pound pup buddies.

> And others telling me that I'm wasting my time arguing with you. Most of whom do not belong to your imagined "Twisty hate pose'". <<

Right......which is why they are so vocal. Sorry Dave, "ghost" support don't cut it. And if you didn't feel so alienated and defeated, you wouldn't look to others to validate yourself.

>OhOne thing is probably true, though, I have damaged my reputation somewhat by allowing you to draw me into these no-win situations. <<

Drawing you? LMAO! LOL! HAhahahhahahah!When you post a lie, you damage yourself, not I.

>Compared to some of the more "colorful" people here, I am mild.
<

They are all mild. And impotent.
And it pisses them off. You hear the DX today? HAhahhahahahha....there were some serious pissed off hammies trying to get through....they just didnt have the azz for it.....hahahahahahahahha!

>How do you know, out of a load of freebanders, who the "hams" are? You can't expect me to believe that they actually used their ham calls on the freeband? ><<

What you believe means squat.

>What "character flaws" have I admitted to, out of curiousity? I don't recall doing any such thing.
<

You think being a smug, disenfranchised, troubled youth are GOOD traits?

>That was 20 years ago. Growning up and maturing from that stage gives me a perspective by which to gauge many other people.<<

Hahahahhaha. Those interchangeable words again....."judge" does not mean "gauge".

> The old "been there, done that". I think that overcoming my earlier "flaws" has allowed me the opportunity to reflect on my own life, and gives me insight into what people think and why they think that way.
<<

..... that is a good thing, a first step.

Your words are there for all to enjoy, whenever they wish.

>And many of them have been quoted in other people's tag lines.
<

Yea, it's part of the joke you're not in on.

Sure, it's part of you guys impotent smear tactics.

>Really? What part of my quotes that have been used by people such as Landshark and Aaron, contains any "smear"? <<

Huh?

>I think my advice and insight have been on the money far more than it has been off. <<

Delusions of grandeur. You don't see yourself as others do...that also has been shown.
Kinda what makes you a funny guy....

>Once again, you are free to disagree with my assessment of society, and how it has regressed in recent years, but unless you can counter that view with something equally compelling, it does not make me wrong.
<

You are right, it doesn't make you wrong, it does however, make you a socialist.

>I really don't think you know what a socialist is.<<

What you think, or guess, matters to none but yourself.

> Otherwise you wouldn't be making such a ridiculous accusation. Socialism is all about government control. Following sensible rules<<

You are not a judge, therefore not qualified to say what is and isn't "sensible".

> and being considerate of other people's rights, is hardly "socialism".<<

Who said it was?

You now do the
side-step and and expect us to disregard your own words and believe the spin you are telling us now that you have grown up since then.

>What words am I trying to get people to disregard?<<

Your insults and name calling. First you claim it didn't take place, then after dining on more crow you checked your archived posts...then came the shuffle of you DEFENDING what you first claimed never happened. See above,,,you defended it....if you never said it, how can you defend it? Troll on.....

.

> And yess, I have changed my viewpoint in the last 10 or 15 years. Most people do when they get older. It's called maturity.
<

dave, you have started with me so many times in here, true to form, just like Lelnad, Frank and the other trouble posse members that pledged to cause trouble in rec.radio.cb.

>Who has "pledged to cause trouble". <

You miss the post by Arron that said the group would have to contend with the antics of yourself, lelnad and Frank and Dogie if "Aaron" were suddently to stop posting?
Concerning where it came from, I am certain it wasn't misinterpreted by anyone, even though you now desperately try to avoid the subject.

>I know that is not my intent. If you don't like your lawlessness being brought up, maybe you should do something about it. <<

I'm not the one having temper problems, losing ISP;'s and generally whining and demanding for reasons, excuses, justification, etc.....you are.
Again, the "problem" is at the point of origination......within yourself.

>You need to realize that the rest of the civilized society does not view your radio crusade the same way you do. <<

The "crusade" belongs to those disenfranchised hammies, shown by your problem you feel others are responsible for.

>People who have respect for the law, are not the ones causing the trouble. <<

HAhahhahahahahahahha...I am sure they changed ISP's because they wanted to...several times.

I give everyone the benefit of doubt at first...you are no longer worthy of such delights. You must unprove yourself..a reputation is much harder to repair than destroy, but you can't say you weren't warned.

>And that perception is up to the individual. <

You only wish it were.

>You are free to make a mental black mark against my reputation. But that does not mean that others will share your view. You too have a somewhat dubious reputation. It's all about your perspective.
Dave
"Sandbagger"
<

You drew first blood.

>I would disagree with that. You were the one that started with speculative comments, accusing me of lying, and commenting on my inability to follow your changing of the topics, and accusing me of deliberately steering the topic when I attempted to return to the core topic. That whole thread on respect on the radio, that you kept trying to change into a discussion of USENET ettiquette. It's all there in google.
Dave
"Sandbagger"
<<

It sure is, and if you would like to see just how and why I labeled you a "dick", I would be glad to post it, since you claim it "never happened". Better go back a bit further in google.

You will find NO beef on my part with hard-working (and legal) truckers. My
ONLY annoyance is with those who steal frequencies and operate on the ham
bands without the required license. I
cannot and will not respect that. And any driver who is a ham is most
welcome and gets my respect
for his efforts to obtain the license--and there are quite a few that have
obtained the license. Those
you don't find operating on the lower end of 10 Meters; they know better
than to run AM on a CW'portion of the band.

Jerry

Back after a nice weekend just relaxing... now onward through the
frankie maze of cannon fodder...

Well Buck'O...

I typed out a much longer reply to each of your issues, then tried to post it
only to have my original news group program refuse to take it for size
issues. So I'm back using a different program, but would just like to respond
with specific statements. If you care to believe them
or not, it's on you after this post. As time allows, I'm working 10 questions
up for you to "have at."

First off: In a totally different thread, I re-posted someone's original Post
- Email text to me which stated the 6146 tube was possibly used in TV
horizontal oscillator
section. The initial posts, lead me to believe some of the early Heathkit
project TV sets used the 6146. That's pretty much the whole deal... Since the
6146 would probably
work in the application, I had no reason to ask for more detailed specifics.
Nothing wrong with that is there...?

If your going to take me to task over said re-post, there's not much I would
care to do about it. Researching TV sets using 6146 tubes is not a burning
issue for anyone but you. I don't much care past the general mention of the
possibility that the 6146 tube would probably function in the application. It
would not be out of line to assume it might have been done based on someone
else's mention of it.

Second: You dance and sing the HF & VHF Low Band amplifier song more than you
should. As you have already pointed out, I do have current FCC Licenses
around 31Mhz allowing significant power levels which would allow me to use an
FCC type accepted amplifier in line with a legal transmitter to obtain my
authorized power limit. I have the mentioned type accepted amplifiers in
service now. One can purchase legal type accepted amplifiers easily enough
from Ebay, I do it all the time and there is no legality issues to worry
about.

You asked me for a Company currently making amplifiers for services within
your original specs, I mentioned the Alpha Crosslink 99 as an example. The
issue of any company currently making amplifiers within your magic window
(posted rules) of frequencies is another thread, aside from the subject of
manufactures making type accepted amplifiers is a sidebar or separate thread
topic. If you care to go over the rules and regulations into detail, do it
in another thread and we can hack up the issues and legalities there-of. I
don't care to pour over the details of 2.185, but you could at least have the
courtesy to post a working url (web location) where readers could review the

actual text. It would do much to support any points you might care to make.

Third: IB is a valid FCC License hard copy designation for the Industrial Business Radio Service. Not much I can or care to do about the FCC web page(s) only using the IG label, but IB is clearly typed on original hard copies I have. I'm not about to post hard copies of licenses on the net, but since your a radio person "working in the business," maybe you'd care to review some of the licenses for equipment for which you might have access to. ...after all, "you work for one of them... "

Where your going with your triode, tetrode and pentode mode questions is not yet clear. If you can try to get past your dumb question line up to some point you want
to ask, then I and others might answer it. I see some serious theory holes in your past posts and replies, they will be brought to your attention when I get my 10 questions
ready to post. I consider a lot of your previous questions very broad, leading or open ended... I believe that if your actual tube rf amplifier theory were better, you would have been more specific or detailed with your questions. Then I and or others would be able to give you a more complete answer; rather than asking you questions to narrow down exactly what you want to have us reply about.

Onward...
skipp
http://sonic.ucdavis.edu has a killer amateur radio page...

Let's assume for a moment that the majority of the illegal cb activity into the amateur bands is a result of ignorance on the part of the radio operator. They are ignorant of the rules and regs because there is no mechanism in place that requires them to learn the rules and regs.

Many states have programs in place that require people to take basic safety/regulation courses to make sure that they have a basic understanding of the activities they are engaging in. For example, hunters and boaters have to take basic safety/regulation courses before they are allowed to engaged in their respective activities. The purpose for this is not only to ensure the safety of the general public, but also the safety of the individual engaged in the activity.

Why not require cb users to complete a basic RF safety/regulation course before allowing them to operate their radios? It seems to me that everyone would benefit to some extent; the user obtains a greater knowledge and understanding of their hobby, interference into the ham bands is reduced, and potential health and safety problems are reduced.

I know there will always be some hams and cber's who will, for whatever reason, deliberately violate the law and there is not much we can do about them. However, that doesn't mean that proactive steps can't be taken.

Here in CT, you have to take about a 7 or 8 hour course to get yer permit to carry a concealed handgun.
You also have to take a 10 hour course to get your boating/personal watercraft licence. (makes sense, doesnt it !)
How long you reckon a chatterbox ticket schooling should be ??

Assumption, Georgie-girl. Aanal Aaron has no clue about my "claim to
fame". He has no clue, period. Neither do you, Georgie-girl Busch
WA3MOJ in Allentown, PA. "Elmer"?, nahhh he's a "remle". He wouldn't
know how to turn on a ham radio if you told him; he's too busy
trolling a CB newsgroup.

Just like Aanal Aaron! He never could post any proof that I'm somehow
"Steve", even though he said he would "Gladly" post it. Guess we now
know he doesn't have any proof!

If I mispoke myself, I am very sorry. But that was the intended message,
not to deluge the public
who, most likely as you correctly observed, are not concerned with the
issue. I think the drivers and the companies should be given a chance to
correct it internally since many of them probably
don't know they are illegal. Therefore, I would like to see companies
notified and give them a
chance to rectify the problem internally. Then, after a suitable period, it
should be followed up with
enforcement action. I also like the idea of getting Dale Summers to address
the issue on his radio program.

The old "gentlemens' agreement" said LSB on 16 and 30 thru 40. Most
foreign operators use USB. AM is not really welcome on sideband
channels for obvious reasons.

3393. Yeti question and answer time

Newsgroup: rec.radio.cb
Date: 2002-10-28 23:46:30 UTC
From: nospamatthistimethanks@yahoo.com
Message-ID: <3DBDCC56.1FFF993D@yahoo.com>
Source record: 142173

We'd like to get a few answers from you Yeti, they don't really count as "my ten questions for you," but they should be answered so we know your position on previous posts that are unclear. I've cut and pasted the actual text from some of your previous statements and reply follow up posts below. Take some time and read through them, nothing is made up here... but each of my questions should be answered, else we think your actual rf theory is weak.

In your Wed, 23 Oct 2002 01:30:58 post, you wrote
:Just take a look at the schematic for the 1200-X. The screen and
:suppressor are tied to the plate, just like I said. All three grids
:are NOT grounded as YOU said.

"Tied to the plate" eh..? So this is what you think..? ...or you can also make mistakes... typing or otherwise..? Let me compare this to my 6146 in TV re-post. If a person reading said were to use a 6146 as a sweep tube... they might have a measure of actual operational success. OK..? If the same person tied any grid to the plate in an RF amplifier circuit, a sweep or 6146 tube would "GO POOF..!" Which is the larger issue here..? You may correct your statement, but you still posted it as shown and we can now see you easily make mistakes, serious mistakes...

:LOL! I would sure like to see an amp where all three grids are tied to
:ground. Got an example of that somewhere, (You realize, of course, that

:this will be another of those lingering questions until
:you come up with proof!)

Please define DC and Signal grounds in an rf amplifier... Is it not possible that a grid would have an AC "signal ground" and a different dc potential..? Isn't it rather common..?

: It's possible to run Class AB2 using ANY tetrode or pentode. However,
: with a sweep tube, it's almost essential to run AB1 to avoid the
: severe grid current distortion. Swan even makes a point of this in
: their manuals.

I'm almost falling out of my chair laughing over your above statement... Can you give us any clue as to the mode of most grounded grid sweep tube rf amplifiers and why..? Their advantages besides being a low cost device for a linear rf amplifier..?

: Maybe not "high fidelity", but you most certainly have to keep the
: distortion to a minimum. Harmonics can sneak right through a pi tank
: just like it wasn't there, despite the fact that they are low-pass
: filters. The reason is because they are resonant, and that means they

: are also resonant on the harmonics. Linearity is the key to reducing
: harmonic distortion when you are talking about linear amps. Jeez
: Skippy, that's AC-101 stuff, I can't believe you didn't know that!

Have you ever measure the output of a sweep tube amplifier using a pi tank circuit..? Would you say a pi circuit would never allow FCC legal operational harmonic levels in a well
designed grounded grid amplifier..?

: Now don't duck the question like you do all the other questions: How
: is triode configuration of a tetrode/pentode more like "low-mu" and
: not like a triode? (Another lingering question -- I guess I am going
: to have to make a list if you keep spewing these ridiculous claims!)

Actually a pretty good question, but rather leading as you post it... the answer is another question... what is the role of the triode/pentode G2, G3 grids in a grounded grid amplifier circuit..? Although not active with potentials, the G2 & G3 grids are present and affect the circuit operation. You seem to lack understand of or ignore their role in a grounded grid amplifier. In short, do they do nothing for the circuit..?

Tue, 22 Oct 2002 03:46:39
: I didn't say "all three grids grounded 'triode operation'". Triode
: operation is when the screen (and suppressor, if there is one) is tied

: to the plate. If you ground all three grids as you suggest, all you
: will do is melt your tube (if you don't nuke your power supply first).

: What I DID say was that the tubes were used as triodes instead of
: tetrodes or pentodes because of the linearity gained from operating
: them as triodes. And using triodes in a grounded grid configuration is

: not suprising when the circuit requires linearity.

Whoops.. there's that grid tied to the plate statement, again made in a different separate post. Maybe that's what you actually wanted to say..? Assume for one moment, there is adequate linearity in a typical or example amateur grounded grid rf amplifier... what if any other significant advantages do we get from the circuit?

: Thu, 24 Oct 2002
: The power supply: Series connection of diodes isn't a very good idea
: without a parallel voltage divider (=especially= in a voltage
: multiplier circuit), and resistors should also be used to balance the
: current in any parallel semiconductor load. I see the lack of them as
: a real possibility for failure.

Your "verbose analysis" of the KLV brand amplifier circuit... (I cut some non related text off) What if anything is wrong with your just above statement..? In specific, the inclusion of resistors into the circuit..?

: Now for the amplifier: Notice the use of the triode configuration of
: the sweep tubes, and that they are used as grounded grid amplifiers.
If
: there was no bias supply (just a grid leak resistor and cap) the tube
: would be working as a Class C by the very nature of grounded grid
: operation. This is because grid current flows for half the cycle,
: effectively pulling the grid negative all by itself. So if you want
: linear Class AB or B then you need a grid supply with very good
: regulation. A simple half-wave rectifier and RC filter isn't very good

: regulation. But here's something even more interesting: only the grid
: is biased, not the screen/suppressor that should be part of the
: effective grid.

What are the roles/function of the screen and suppressor grids in the
circuit..?

: The result is that this amp could indeed be running
: Class C; if I'm wrong and it really does run Class AB2 then it will be

doing so with considerable distortion because of the poor regulation

How would you set up C, B, AB1, AB2, A operation for this amplifier...?
which is the best for this circuit..?

: of the grid supply. Grid-current distortion is going to be prominent
: in AB2 unless the grid supply can be adjusted so grid current is
: flowing for more than half the cycle -- which, of course, isn't a good

: condition at all because the plates are going to turn a nice shade of
: vermillion. In order to avoid this the plate voltage must be reduced
: in order to reduce the plate current, which isn't likely after seeing
: that they use six plate caps.

How would you make the mentioned AB2 grid supply adjustment/change ..?
What is the best linear mode for this circuit in a classic Amateur
layout..?
... and why...?

: After that, I see that these amps have only a pi output filter. This
: does little for harmonics, and should be followed by a non-resonant
: low-pass filter. To not include the LP-filter in the design when it's
: required for proper operation is a decision based solely on profits,
: and not on good engineering concepts and practices.

Why is a LP filter "required for proper operation" when the many "off
the shelf" amateur amplifiers use only pi or pi-L tank circuits..? Are
they
all poorly engineered..? Is legal operation not possible with only a
pi or pi-L tank circuit..?

: So I can say, without any doubt or hesitation in my mind, that this is

: a noisy amp, and somewhat prone to failure by a couple design flaws.

And those design flaws are..? and the noise level is _____
..? as measured or determined by _____ ..?

: It seems that if they put as much effort into designing a proper grid
: biasing circuit and power supply that they put into designing the
: preamp, this might be a really good unit. It would be an even better
: amp using -real- triodes instead of sweep tubes kludged as triodes.

What would be a proper grid biasing circuit and power supply..? What
would be a comparable "real triode" currently made and sold for less
than $20 US new..?

: The advantages? The amp -does- have three different power indicators,
more buttons and knobs than a
: typical amp, and a cheap price tag. So it's perfectly suited for it's
intended market.First off you need to
: realize that the intended purpose is as a CB amplifier, as if that
wasn't obvious already.

Where is the intended market mentioned..? Are there no other
countries that allow 10 meter amplifiers to be made or sold... Is this
amplifier made in the US..?

: With that in mind, the pre-amplifier is effectively useless, doing
nothing other than making
: the noise floor louder.

Companies like ARR, Sinclair, Telewave and Angle Linear all make various
fet amplifiers... If the noise figure is less than say 1.5 dB, but the
signal gain is greater
than say 13 dB, doesn't that sound like a pretty good preamp..? Even
if it were a lower gain Dual Gate fet..? would you say the advantage is
overkill..?

(Preamps are very useful with radios that have weak receive, such as
older, antique radios and homebrew receivers;
for modern radios that can pick up a mosquito farting at forty paces
they are nothing but overkill.)

So most all of the Western States Weak Signal Groups and similar Eastern
US Weak signal groups with modern radios and fet pre amps are wasting
their time..?

Wed, 23 Oct 2002
: Strangely enough, I'm not suprised. Considering that when the screen
: is tied to the grid the amplification factor is 4.4 (very low), and
: connecting it to ground is only going to make that number lower. So

"Screen tied to the grid" ..?

: that amp can't have much gain, which is a terrible waste of those
: tubes which are capable of so much more. And the low gain also limits
: it's dissipation, so that's why the grids don't melt. But I'll bet
: it's really smooth through every one of those six big decibels!

Is there not at least one or two un-mentioned significant advantages to
the circuit..?
Are you not missing a point of why the circuit is so popular..? You
mean I can't get more than 6 db gain from
sweep tube rf amplifier..?

: If you have so much experience picking up legal amps for services
: between 25 and 34 MHz, why can't you even provide one reference --
: website, manufacturer & model, or even an FCC reg -- that supports
: your claim?

TPL-Brand, Model:PA1-1FE Three of them just closed on Ebay, item
numbers 1776789478, 1776789530, 1776789590 .

Don't know or care if they are in current production, but they are legal
examples
I can and do currently use.

Who knows, if you "get enough of these right," I might count them as
your
ten magic questions.

Up here the Restricted Radio Operators, Land class takes about 2 hrs and 1 hr for the test. The Air and Marine courses are a bit longer.

Yes. It used to be that you needed a license to use a marine radio. It still may be if the boat is larger than a certain size, but the FCC has essentially given up on all regulation except that which affects big business (i.e. commercial broadcast radio/television, cell phones, cable - various stuff like that). There once was a restricted radiotelephone license which was necessary to use a radio in a taxicab. Maybe that was the 3rd class radiotelephone license, I'm not sure. There was a broadcast endorsement for the 3rd class radiotelephone license which enabled you to run the controls of a non-directional AM station of 5,000 watts or less. You needed a 2nd class radiotelephone license to service cb sets (I'm sure many folks have some real stories to tell of some wannabe techs that ruined radios for a living). Finally, to run the controls of any radio station over 5,000 watts or a directional AM radio station or television station, you needed the 1st class radiotelephone license. That was a rather nasty test. I remember well one the first questions on the darned thing. What is the frequency of the video carrier of channel 6 television in the United States? This meant you not only had to know where the video and audio carriers were within the assigned bandwidth, you had to know the splits between the channels. Now, they leave that up to private groups whose main interest is to make sure you keep up your membership to be considered 'qualified'. i.e. $$$ The only requirement today (I think - this may have changed) is that the chief engineer of the broadcast station must have a general radiotelephone operators license (formerly the 2nd class radiotelephone license). Considering how they have watered down the requirements, it is very unlikely they are going to worry about John Q. Public running a 5 watt cb set. They don't have the number of people to actually do much enforcement (they watch out for the guys with the buck$ - i.e. commercial interests). I honestly think you have hit the nail on the head. Unfortunately (and I get caught up in this too), the amateurs and cbers get into a lot of arguments over this. The number of people who actually know and actually enjoy breaking the rules are probably quite small on both sides, yet you still hear real garbage on 75 meters (and 20 too) as well as the happy freebanders and 10 meter intruders. I thank you for your post. You make a valid point, but it makes too much sense to ever be adapted. They dropped all those rules years ago (anyone remember when they dropped the licensing for 27 MHz cb?).

73 from Rochester, NY

The problem is your definition of 'sweep tube'. Because the sweep tube
is typically a power pentode, you seem to classify all power pentodes
as 'sweep tubes', which is far from the truth:

The TRUTH is that sweep tubes were designed for one purpose only: they
are optimized for use as horizontal deflection amplifiers at about 16
kHz, which is a far cry from 27 MEGA-Hertz. This is demonstrated by
examining the interelectrode capacitances for both types of tubes: The
input and output capacitances for a 6LF6 are twice that for a 6146,
and the all-important grid-to-plate capacitance (the main factor that
determines the maximum usable frequency) is more than TWELVE TIMES
larger! Not only is the sweep tube non-linear at RF frequencies, it is
also very prone to self-oscillation. They require a significant amount

of neutralization just to get them to work on RF, linear or not! (As for grounded-grid operation, see below.)

The TRUTH is that some tubes are designed for general purpose use, while others are designed for very specific applications. RF power tubes were designed for RF power applications, and sweep tubes were designed for horizontal deflection amplifiers. True, some power pentodes will work in applications for which they were not intended, but cannot be used AS IF that was the specific application for which they were designed. Sweep tubes and RF power tubes are, by and large, NOT interchageable as if they were designed for the same purpose!

Now if you are wondering why I am hung up on this insignificant bit of information, it's because it's not insignificant at all. The difference is the difference between a clean signal and a signal loaded with harmonics, between an efficient and an inefficient amplifier, and between good and mediocre engineering practices.

You have not mentioned one amplifier that's type-accepted/certificated for use between 24 and 35 MHz on the services for which you have a license, or for any other service on those freqs.

It's simple logic, Skippy. Your license limits you to the use of equipment that's type-accepted/certificated for that service. There is no amplifier being manufactured that meets that criteria. Therefore, use of an amplifier on those frequencies, even WITH a license, is illegal because you would be using equipment that isn't type-accepted or certificated.

You can try and twist the rules all you want in order to justify your position Skippy, but the fact remains that amps on those freqs is illegal. Period.

There is no IB service listed by the FCC, and there are no licenses
listed for the IB service. If you doubt that, go check the database
yourself. Here's the link:

>to have us reply about.

It's very simple: The term "mu" is used to describe the amplification
factor of a triode, and can be "high-", "medium-" or "low-mu", which
are relative comparisons for all triodes. A pentode (or tetrode, beam
power tube, sweep tube, etc.) can be connected and used as a triode,
in which case it is rated by it's amplification factor, or "mu", just
like a triode. The problem here is that you seem to think that a
triode-connected pentode is somehow NOT working as a triode, and that
the term "low-mu" describes something other than the amplification
factor of a triode. You have yet to explain why they do NOT work as
triodes, OR how a triode-connected pentode DOES work. But let me take
a guess:

Grounded-grid operation eliminates the need for neutralization, and
triode operation will linearize the operation of the tube. But this is
at the sacrifice of efficiency. The grid of a grounded-grid amplifier
conducts for a considerable portion of the cycle. RF power tubes
designed specifically for grounded-grid operation have hefty grids
that can dissipate that power, but sweep tubes don't. Therefore, the
sweep tubes that are used as grounded-grid amplifiers must keep the
grid current to a minimum. There are only two ways to do this. The
first is to run the tube Class C (which, of course, is not linear).
The second is by reducing the power gain of the tube EVEN LOWER than
the typical gain of a grounded-grid amplifier, resulting in a very
inefficient amplifier. Is THAT what you mean by "low-mu"?

>Onward...

3411. Re: A solution provided by the 10 meter intrusions

Newsgroup: rec.radio.cb
Date: 2002-10-29 02:57:45 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <urru9ef7gjere3@corp.supernews.com>
Source record: 142190

No, Twist, I've seen it stated that 10 meters is **largely** unused. No, no one stated it isn't used, just seldom used with a lot of wide open space. I really don't feel like searching the archives ... I have seen it stated (roughly quoted that it is hardly used). In fact, it may have been on UJs site. There are a couple of junivile delinquents loose there of late. I don't know what post got me started - usually I let the other guys take the blood pressure medication. Myself, I'll just have a 6 pack and leave this whole mess alone for a while. I saw one good post and believe that is closer to the truth than most care to admit. A lot of places sell radios. A lot of folks don't know what all those 'uppers' and 'lowers' are, other than extra channels. Oh well, on to the 6 pack. ;)

Just a thought. The argument is that it isn't being used. <snip>
==========
I haven't seen anyone defending intruding on hammie bands on rec.radio.cb., let alone claim a defense such as you suggest. Am I missing posts, Jim, or are you speculating?

With that, I agree. To suggest that all truck drivers talk like that is ludicrous. I'll have to recheck his post. Posting one's name may not generate credibility, but using an anonymiser certainly drives the credibility to **zero** in a hurry. Jerry doesn't fit that. Back to the truck driver business; I've met a number of them where I work. Every one that I met was both friendly and most articulate. One guy I met saw me looking over the truck (from a distance). I don't know diddly about trucks, but that thing was absolutely beautiful. He told me he just bought it 3 months earlier. I forget what he said it cost, but it seems to me it was somewhat over $200,000. More than most homes. Sure, I noticed the antennas. Never asked. It is a lot easier to be an idiot over the internet than when you meet an individual and find out he is a decent guy working hard at making a living. On that last point, I would hope all of us would agree.

Whilst I did state it is wrong to paint all truck drivers with a wide brush, I would post this question to you. If one were to run LARGE amounts of power (and this does NOT necessarily imply truckers) or intrude on 10 meters (where a lot of hams get unhappy), would it make sense to do it day after day from a base station? Why or why not? Ever listen to a mobile legal cb mobile? Ever notice how (assuming it isn't skip) often gets stronger for a bit and then weaker. Ever heard skip? Can you usually tell the difference between a skip station and a local station (yes, they might be strong, but fading in and out will occur on a skip station). The fact is that a moving target is much harder to hit. Take the shootouts. Why not just run a gazillion watts from your own driveway? My guess is that most base stations running illegal power will be fairly modest (on the order of 50 to 200 watts). One runs into interference problems with neighbors otherwise. I'm guessing here and would invite some of the skip shooters to put the square dope out on this - but my guess is the real high power is likely run mobile because, as I stated, the moving target is harder to hit. One kid (local in Rochester, NY) was interfering with the local 10 meter repeater. Dumb idea. Too obvious that he was local. All you need is a couple of hams with beams and you know where he is within a few blocks. Now, this doesn't prove truckers - but it almost certainly will be a mobile station to get away with it over any period of time. Of course, some truckers have been caught. Therefore, some folks have drawn conclusions.

I am NOT listening to 11 Meters. I am monitoring 10 Meters--you know, that
band where some of us obtained privileges by fulfilling the requirements
instead of just yapping where we damn please.

1) FCC

2) or Amateur volunteers using form letters and a list of trucking
companies. All these volunteers would do is just mail out the form letters
to the companies. That, of course, wouldn't get all the
mom & pop, single truck outfits, but it would make a dent.

The next move would be that which is going on now; the letters to the
Communications Sub-Com-
mittee and Greg Walden to come up with enforcement strategy.

I know that many folks scoff and don't take us seriously. But there are
many more than me, I assure you, that are absolutely serious in getting
something done about this.

As to going to VHF/UHF, it WOULD be very good for the drivers since the
noise and skip would
be greatly reduced. I think they would actually LIKE it.

I have never run across an ham that was upset over the loss of 11
meters. The majority of hams today were not even hams or around
when 11 meters was a ham band. The loss of 11 meters had virtually
no effect on ham radio, just too bad they had to turn it over to a
bunch of fools.

jim the larger signals you here on channel 6 are from bases although most common big bases are sb220's there are some running big ceramic tubes as well but the HUGE power is almost always mobile. my favorite guy to listen to is Black Ambasador from california with his 8 element yagi, dual 3cx3000's, and his collins rig. man he's a fine sounding signal. so is 22 steel in the great lakes with that single 3cx15,000. toll free was the man that can tell you about alot of big bases out there in southern cali. there and in NY are where the really big bases seem to be.

Hey all,
Just wondering what the best omni directional base antenna would be....
How would the following rate?
- solarcon I Max-2000
- S 2020 / spyder / sp-1600 5/8 wave
- maco v58 5/8

Thanks in advance :)

>mistakes...

I was wrong, and unlike you I admitted it without whining, griping, or
making excuses. And like I said, regardless of whether the screen is
tied to the plate or the grid, the tube is still operating as a
triode. You disagreed with that statement, yet you have yet to explain
why the tube is NOT operating as a triode.

>:LOL! I would sure like to see an amp where all three grids are tied to
>:ground. Got an example of that somewhere, (You realize, of course, that
>
>:this will be another of those lingering questions until
>:you come up with proof!)
>
>Please define DC and Signal grounds in an rf amplifier...

As pertains to the grounded-grid sweep tube, as exampled by the
KLV-1000 and the Swan 1200-X: In the KLV, note that while the screen
and suppressor are DC grounded, the control grid is bypassed and
effectively AC grounded. IOW, all three grids are tied together and

effectively function as the single grid of a triode, despite the control grid having a DC potential. In the Swan, the screen and suppressor are tied together and function as the grid of the triode (because they are AC grounded with the 0.01 uF caps), while the control grid is tied to, and made part of, the cathode. This is a much better design than the KLV because the screen is now acting as the grid, and is capable of dissipating more power developed by the effective grid current.

Regardless, both examples are functionally equivalent to a triode, and both require the the DC voltage of the effective grid be reduced because of the dissipation limitations of the tube grids.

> Is it not
>possible that a grid would have an AC "signal ground" and a different dc
>potential..? Isn't it rather common..?

Yes it is. Does a DC bias mean that it's no longer a triode? No.

>: It's possible to run Class AB2 using ANY tetrode or pentode. However,
>: with a sweep tube, it's almost essential to run AB1 to avoid the
>: severe grid current distortion. Swan even makes a point of this in
>: their manuals.
>
>I'm almost falling out of my chair laughing over your above
>statement... Can you give us any clue as to the mode of most
>grounded grid sweep tube rf amplifiers and why..? Their advantages
>besides being a low cost device for a linear rf amplifier..?

The paragraph you quote was not about grounded-grid amplifiers, it was about grounded-cathode amps. For some reason you seem to be confused about the differences. I will clarify (for any other readers as well, so don't think this is a lesson directed only at you):

A "grounded-cathode", or "common-cathode", amplifier is where the cathode is grounded (duh). The ground is a signal ground, although it can also be a DC ground. The grid is fed with an input signal and the output is taken off the plate by the load. When the grid voltage is negative with respect to the cathode, no grid current flows, and power gain is theoretically infinite (input voltage being a scalar value without power). But when the grid is made positive with respect to the cathode, current will flow from the cathode and out the grid. The problem with grid current is that the input signal is not be able to maintain it's shape with current pumping out from the grid. The signal on the grid is therefore distorted, and so will be the output. Grid current distortion can be reduced in two ways; either prevent the grid from going positive, or provide a very low impedance input signal to the grid.

Because common-cathode amplifiers can amplify without drawing grid current, they can use tubes that were not designed for high grid currents (sweep tubes included). However, the signal peaks must be

limited or they might drive the grid positive and cause grid current. Most amps of this type (i.g, Swan radios) have a circuit called an ALC, or Automatic Limiting Control, which reduces the input to the amp if grid current begins to flow. The circuit can do a good job of reducing the distortion, however it does not prevent it completely.

A common-cathode amplifier may be designed to intentionally draw grid current if the input signal source has a low enough impedance as to prevent the signal from being distorted. A poor method of doing this is by using a "swamping resistor" on the grid. A better method is with a tuned grid circuit with a very low resonant impedance. But you still need a tube that has has a smooth transition into grid current conduction, which the sweep tubes do not have. And that's why Swan made it a point in their manuals not to rely on the ALC circuit to prevent grid current distortion.

The "grounded-grid" amplifier has the grid grounded (AC ground, although it can also be DC grounded), and the signal is fed to the cathode. If the DC potential of the grid is the same as the input signal, then the grid will be positive for half of the input cycle, and grid current will flow for half the cycle. This is fine for linear amplification because the shape of at least half of the sine is not distorted. But that's a lot of grid current, and if the tube isn't designed to dissipate the power caused by that grid current (as is the case with sweep tubes) then the grid current must be reduced. Proper practice would be to reduce the gain of the tube, but the gain of a grounded-grid tube is already very low. The common practice, however, is to make the DC potential of the grid more negative with respect to the cathode. Unfortunately, this distorts the output signal because the grid current flows for less than half of the cycle, and therefore causes grid-current distortion. Grounded-grid amplifiers are most efficient in Class C operation, which is where they are most often used.

>: Maybe not "high fidelity", but you most certainly have to keep the
>: distortion to a minimum. Harmonics can sneak right through a pi tank
>: just like it wasn't there, despite the fact that they are low-pass
>: filters. The reason is because they are resonant, and that means they
>: are also resonant on the harmonics. Linearity is the key to reducing
>: harmonic distortion when you are talking about linear amps. Jeez
>: Skippy, that's AC-101 stuff, I can't believe you didn't know that!
>
>Have you ever measure the output of a sweep tube amplifier using a pi
>tank circuit..? Would you say a pi circuit would never allow FCC legal
>operational harmonic levels in a well
>designed grounded grid amplifier..?

You keep saying things like "well designed" and "classic", but you never seem to describe what makes them "well designed" or "classic". Despite that, yes, I have seen a spectrograph from a pi filter, and yes, they can and do pass harmonics. And I'm sure that's one of the

reasons why the amateur bands are situated on their own harmonics. But any FCC authorized equipment (other than for amateur use) requires more than a simple pi tank to pass FCC emmission specifications. Just about any piece of commercial radio equipment you see will have a non-resonant low-pass filter before the output jack. I haven't seen one yet that didn't, CB radios included (even the antiques!).

>: Now don't duck the question like you do all the other questions: How
>: is triode configuration of a tetrode/pentode more like "low-mu" and

>: to have to make a list if you keep spewing these ridiculous claims!)
>
>Actually a pretty good question, but rather leading as you post it...
>the answer is another question... what is the role of the triode/pentode
>G2, G3 grids in a grounded grid amplifier circuit..? Although not
>active with potentials, the G2 & G3 grids are present and affect the
>circuit operation. You seem to lack understand of or ignore their role
>in a grounded grid amplifier. In short, do they do nothing for the
>circuit..?

They operate as the grid of a triode. As in the KLV, the screen and suppressor (G2 and G3, respectively) are tied to ground, while the control grid (G1) is AC grounded with a DC potential. All three are grounded, despite G1 having a DC potential. Notice that on the Swan 1200-X that it is the screen and supressor that function as the grid of a triode, and that they, too, have a DC potential. The DC bias of the grid determines the class of amplifier (A, AB, B and C). It does NOT determine whether a pentode is operating as a pentode or a triode -- that is determined by the number of effective signal elements (how back to basics do I have to get here?). A triode has three elements: the cathode, the plate and the grid. One is signal input, one is signal output, and one is signal ground. It's that simple. When a pentode is configured as a triode, it groups it's elements together to make the three elements of a triode. So far we have seen xxxxx examples:

Audio - Plate = P + G3 + G2, Grid = G1, Cathode = K
Swan 1200X - Plate = P, Grid = G3 + G2, Cathode = G1 + K
KLV-1000 - Plate = P, Grid = G3 + G2 + G1, Cathode = K

How much you wanna bet that you can make a pentode to work as a triode these ways?

Plate = P + G3, Grid = G2, Cathode = G1 + K
Plate = P + G3, Grid = G2 + G1, Cathode = K
Plate = P, Grid = G3, Cathode = G2 + G1 + K

Even better, how much you wanna bet that you can even do it THIS way?

Plate = G2, Grid = G1, Cathode = K

If you want an example of that last one, just check out the datasheet for any pentagrid converter tube!

Now, care to describe your "well designed, classic, low-mu
sweep-tube-configured-as-a-triode-but-not-a-triode" amplifier?

>significant advantages do we get from the circuit?

From a linear grounded-grid amp? No other advantage. In fact, it has
several drawbacks:

1) The amplifier has very low gain, requiring multiple stages to get
from QRP to a kilowatt.
2) Because of the number of stages, it requires more filament power
for the additional tubes.
3) The low impedance required to drive the cathode requires tuned
inputs with very large capacitors (high C/L ratio).
4) Because of the low input impedance of each stage, there must be
impedance transformation between each stage (again, high C/L ratio).
5) Because the input to each stage requires drive power, the impedance
matching circuits must be large enough to handle that power.
6) If the grid isn't DC grounded it must be DC regulated with a very
low impedance supply, capable of draining the grid current without
adding signal to the grid.

By comparison, an equivalent common-cathode amplifier requires only
one stage of amplification, no drive power, no tuned input (although
it's recommended), no grid regulation, no interstage impedance
matching circuits, and considerably fewer tubes. It does, however,
require neutralization, which can be as simple as a brass or aluminum
rod located next to the tube, or a small trim-cap. An ALC circuit
would also be a good idea, especially if the tube is a sweep tube.

>: Thu, 24 Oct 2002

Instead of "parallel voltage divider" I should have said "voltage
equalization network". Same difference.

>: Now for the amplifier: Notice the use of the triode configuration of
>: the sweep tubes, and that they are used as grounded grid amplifiers.

>: Class C; if I'm wrong and it really does run Class AB2 then it will be
>
>doing so with considerable distortion because of the poor regulation
>
>How would you set up C, B, AB1, AB2, A operation for this amplifier...?
>which is the best for this circuit..?

That all depends on your DC grid-to-cathode bias and your input signal
level. You can set it up for Class A if you want, just keep the grid
negative by one-half the cutoff voltage, and the input signal peak
voltage less than that.

Now, which is the "best" for a grounded-grid amp? Assuming you mean
linear RF amplification, I would have to say Class B -- set the grid
voltage just above cutoff using a very good regulator. But you still
need a limiter or ALC circuit on the driver stage to prevent grid
current. If you can't limit the driver then you better have one
helluva tank on the input.

>: of the grid supply. Grid-current distortion is going to be prominent

>: in order to reduce the plate current, which isn't likely after seeing
>: that they use six plate caps.
>
>How would you make the mentioned AB2 grid supply adjustment/change ..?

Lower (make more negative) the DC grid potential, or raise (make more positive) the DC cathode potential.

>What is the best linear mode for this circuit in a classic Amateur
>layout..?
>... and why...?

You STILL haven't defined "classic". Regardless, the most common class of operation for a grounded-grid amp is AB. Now that can be AB1 or AB2 depending on the drive level. It's up to the amateur to determine how much drive to apply, in accordance with "good engineering practices". That means the amateur would be well advised to use a non-resonant low-pass filter on the output if he plans to drive it into AB2. However, the best linear mode would be B(1) or AB1, and the amateur could easily build a limiter into the driver; or, if nothing else, a peak-reading wattmeter on the input to the amp. The key here is to limit the drive to prevent grid-current distortion. IOW, grounded-grid amps are NOT the solution for distortion when you want more power.

>: After that, I see that these amps have only a pi output filter. This
>: does little for harmonics, and should be followed by a non-resonant
>: low-pass filter. To not include the LP-filter in the design when it's
>: required for proper operation is a decision based solely on profits,
>: and not on good engineering concepts and practices.
>
>Why is a LP filter "required for proper operation" when the many "off
>the shelf" amateur amplifiers use only pi or pi-L tank circuits..? Are
>they
>all poorly engineered..? Is legal operation not possible with only a
>pi or pi-L tank circuit..?

As I said before, these amps are not intended for legal operation. If you can't see that then you need to talk with the FCC about it, not me. Even if they were built for amateur use, it's still up to the amateur to use it wisely (using "good engineering practices"). But since that's not the case, the question is irrelavent. Regardless, this is from KLV's own website:

"ATTENTION! This item is in compliance with CE regulations as long as it is used with a properly installed 27/586 RF Filter between the radio, unit and antenna."

Do I need to point out that the said filter is a non-resonant low-pass filter? Probably not....

>: So I can say, without any doubt or hesitation in my mind, that this is
>
>: a noisy amp, and somewhat prone to failure by a couple design flaws.
>

Poor power supply design, weak grid regulation, and intended for the
illegal amplifier market.

> and the noise level is _____________

Not published by the manufacturer.

>..? as measured or determined by _____________ ..?

N/A

>: It seems that if they put as much effort into designing a proper grid
>: biasing circuit and power supply that they put into designing the
>: preamp, this might be a really good unit. It would be an even better
>: amp using -real- triodes instead of sweep tubes kludged as triodes.
>
>What would be a proper grid biasing circuit and power supply..?

An LM337 would be a good start for a grid supply. The power supply
could be improved simply by adding voltage equalization networks and
load equalization resistors. Even better, use a single diode (or pair
of diodes) that meet the demands of the circuit. Same with the plate
cap.

> What
>would be a comparable "real triode" currently made and sold for less
>than $20 US new..?

I think the price is closer to $30 each. But a better question would
be how much for all the tubes you need for this amp (five) compared to
the cost of a single RF pentode that can deliver the same power gain,
better linearity, smoother grid-current crossover characteristics, and
a smaller, more efficient amplifier with a much lower parts count?
Probably more. Thanks for proving my point. But if you want an RF
triode at a comparable cost, start with the 812A.

>: The advantages? The amp -does- have three different power indicators,
>more buttons and knobs than a
>: typical amp, and a cheap price tag. So it's perfectly suited for it's
>intended market.First off you need to

We aren't talking about other countries. We are talking about the US.
Do you really think that this amp was not built with the intention to

be used with CB radios?

>: With that in mind, the pre-amplifier is effectively useless, doing
>nothing other than making
>: the noise floor louder.
>
>Companies like ARR, Sinclair, Telewave and Angle Linear all make various
>fet amplifiers... If the noise figure is less than say 1.5 dB, but the
>signal gain is greater
>than say 13 dB, doesn't that sound like a pretty good preamp..? Even
>if it were a lower gain Dual Gate fet..? would you say the advantage is
>overkill..?

If your receiver is already sensitive enough to receive the noise
floor, a preamp is not going to improve the signal-to-noise ratio. In
fact, the preamp is going to add to the noise by the stated 1.5 dB,
but it will increase the noise floor by 13 dB!

>(Preamps are very useful with radios that have weak receive, such as
>older, antique radios and homebrew receivers;

>they are nothing but overkill.)
>
>So most all of the Western States Weak Signal Groups and similar Eastern
>US Weak signal groups with modern radios and fet pre amps are wasting
>their time..?

I'm tired of repeating myself: If their radios are sensitive enough to
receive the noise floor, then yes, they are wasting their time with a
preamp. OTOH, if they are trying to pick out CW from BELOW the noise
floor then the preamp is a very good idea.

> There is no rule that says you cannot do that.

Of course there isn't. But, where did THIS come from, anyway? I
thought we we carrying on a real conversation related to the original
poster's question... You see, you will have effectively limited your
GMRS UHF radio to 500mW TPO(you can't work what you can't hear) when
talking to those FRS radios, which adds up to little more than zip
(which is what you start with on FRS).

I wouldn't even consider this a viable alternative(or "advantage") for
the original poster... at least that individual had the sense to
understand that FRS WASN'T an option for their application (hence the
question about GMRS, and the segue to MURS)...

For this individual, this could be the best route to go... especially
for the lowland site. The original poster would have to get back to
us to provide more details on their needs, however. Yagis(beams) are
a little bit harder to set up (and hide from landlords/CCRs/etc.);
and, of course, you limit the direction of your coverage area versus
an omni... but - it might be the right answer in this case, especially
if the radio could be placed near the beam(within 30ft or so), in
order to keep UHF transmission line loss to a reasonable number
(without having to resort to higher-cost/low-loss cable).

>
> >When you combine all the factors, in general, VHF is preferable to UHF
> >for the average outdoor LOS low-cost, low-power communication link.
>
> Yes, if you have room to choose the same antenna type at both
> frequencies.

Yep... and also if you need to mount your antenna far away from the
radio. It is these two factors combined (free space path loss, and
transmission line loss) that can put UHF at a disadvantage...
Power(when used equally at both stations) can make up for the
disadvantage. For example, this is why the FCC allows coordinated UHF
base stations to use a lot higher ERP than coordinated VHF base
stations, in order to achieve the same radius of coverage. But - it
sounds like you probably already know all this stuff... so, this
should just be taken as info for the original poster.

> one elses opinions, huh?

That's a bit selfish. Which is one of your problems. You don't care
about other people.

> >I have no problem with people who take a different view from me, when
> it involves subjective tastes and opinions. If I like Country & Western
> music, and you like Def Leppard, there is no right or wrong, just a

> <<
>
> Bullshit. You have called names, hurled insults and called otherwise
> law-abiding folks "criminals" for espousing a view which you take issue
> with.
> HARDLY a difference of opinion.

You're right. that's not an opinion. If you break the law, you are a
criminal, plain and simple. The fact that you consider radio law to be
petty and insignificant, does not change the facts. The fact that many
other people break other petty laws, does not justify your position
either.

>
> >But when you are talking about factual information, or defacto
> standards, if you take a position that is contrary to those normally
> accepted standards, <<
>
> Facts and "normally accepted standards" are two separate entities with
> two separate meanings. they are NOT interchangeable..

Never said they were. I was citing two different examples.

> >it's up to the opposing party to make the case why the standard is
> wrong. In your case, you need to explain why running illegally should
> not be considered criminal per the laws set forth by the FCC.
> < <
>

> No, I don't. I need explain nothing to anyone. That is where you guys
> start getting out of hand and losing your temper.

No, I suppose even you realize the pointlessness of trying to defend
something that's undefendable. But if you're comfortable with your
rejection of radio laws, then you should learn to be comfortable with
what you really are, a criminal.

> >Why should you be allowed to disregard the rules?
> <<
>
> Hahahhahah....why should "Aaron" be able to disregard TOS? Or Lelnad?

I'm neither Aaron nor Leland, and you didn't answer *MY* question.

>

> and which ones to accept as truth is sorth of the same thing you are
> railing against me for...,,,

This is an example of how you vacillate. First you say that you proudly
DX on the freeband (where you feel no need to explain or defend your
actions), then you claim that you don't break the law. How can both of
those statements be true?

> > That is breaking the law. I don't think it could be any plainer. So

I can no more control what Aaron posts then I can control what you post.
And as usual, you misinterpreted what Aaron wrote, and twisted the
meaning. From what I remember him posting, he basically stated that if
he were to leave the newsgroup, that there would be other people, who
are equally disillusioned with blatent lawbreakers, who would pick up
the torch and carry on the campaign of education. That's hardly equates
to "pledging to cause trouble".

Your first class is called "The criminal in me - How to accept and deal
with the realities of my activities".

You still haven't passed this one.

Well, considering that AOL gives out 1000 free hours on a CD, I'm sure
that more than one of these guys is taking advantage of AOL's "free"
hours. When one expires, they install another, and create a new account.

Sure you go ahead. That way we can see how poorly your judgement of what constitutes an insult is. Besides, I didn't think this was girl scout camp. If you can't take bluntness, I suggest you retreat to the safety of mommy's skirt.

I have never known a Ham that was pissed at losing 11 meters but I do know a bunch that are pissed at the intrusion on 10 meters, Always being blamed for interfering with peoples TV when most of the times it is dirty CB amps on 11 that are the problem and ever tightening antenna restrictions again coming from god awfully antenna configurations like the Wilson Super Laser 500 and the Moon-raker 4 and 6 both are completely ban in my city but that ban also took out most High-Gain 3 element try-band ham beams and all satellite dishes all thanks to the CBers.
I do know that 11 meters is being considered for a satellite down link band in the US and other countries unless CB can prove its usefulness and so far they have not been able to do that. It will take about 10 to 20 years to clear it up but the companies that are buying for it want it now. It won't go back to the hams but to big business because that is ware the $$$$ are.

That's pretty interesting. Do you mean that your local gov't has
specifically banned the erection of the two aforementioned antennas? BTW,
AFAIK, both of those antennas follow the normal conventions (structural &
design) for a crossed Yagi array. What's so "God-awful" about them?

You must have the shortest memory in captivity, Georgie-girl. But I'm a nice guy, so I'll say it once more for the retard: "I'll post my callsign as soon as Aanal Aaron posts his and not before." Clear this time?

Are you actually claiming to have credibility Georgie-girl? Not in this newsgroup you don't. All you can do is troll and stir things up; you never show how intelligent you might actually be by posting good information, you just make fun of others who post based on their experiences. Not to mention all the phoney addresses you have to use! Oh yeah; some "Elmer" you are. NOT!

BTW, I note that your buddy Aanal Aaron has tucked his pathetic tail between his scrawny legs and run away; Aan Aadmission that he has no proof to post here or Aanywhere else, Aalthough he offered to "Gladly" post it more than a month Aago. So much for his credibility (Aas if he ever had Aany). Once Aagain he does his famous patented "chicken side-step". Har de har! Aand guess what? I'm still not "Steve"; never was and never will be.

<SNIP>
Who is going to pay for this, and where will the money come from? For Hunter or Boater education, there is a safety factor gained which can potentially prevent loss of life. The cost for the programs is weighed against the potential lives to be saved, and hence justified. CB radio is not particulary dangerous or life threatening.
BillS

Aanal Aaron was the one who offered to "Gladly" post his proof and he still hasn't done so. I just remind him that I'm waiting (somewhat impatiently) for him to deliver on his promise, and all we've gotten is more than a month of him spamming the newsgroup with trash. Don't YOU think it's time for him to put up or shut up? If he could do it, I could stop reminding him; so why don't you get on his case?

BTW, if I happened to be "Steve", I'd have had him shut down long ago for TOS violations. As it is, I think it's funny to watch him squirm and do his famous patented "chicken side-step" over and over, losing what little credibility he might once have had. Gee, that's almost exactly the same explanation Frank Gilliland gave a while back for continuing to troll here ("because it's fun!"); maybe we do have something in common after all.

Sure it is; the spelling is Georgie-girl's, the attitude is
Georgie-girl's.

> "Elmer"?, nahhh he's a "remle". He wouldn't
> > know how to turn on a ham radio if you told him; he's too busy

> accusing others of doing the same. LOL while you cry about him remaining
> anonymous you also do the same thing.

I am neither anonymous (my email works) nor a troll; I correct Aanal
Aaron's BS. He selected me to do so the same way the "groupies"
selected him to repeatedly tell them that everything was "illegal".
See how it works, Georgie-girl?

>
> > Just like Aanal Aaron! He never could post any proof that I'm somehow

> postes of this NG you must be held by those same rules right otherwise your
> a troll. So I say to you like you say to me prove he is wrong.

Nope; Aanal Aaron offered to "Gladly" post proof. He has not and
cannot.

> >even though he said he would "Gladly" post it. Guess we now
> > know he doesn't have any proof!
>
> He doesn't have to supply proof you have to prove him wrong stupid, this
> goes along with your exact theory as noted by the sig file.

You still can't spell it, Georgie-girl, the word is a contraction: "you're", not "your". And my statement says precisely the opposite of what you claim: If Aanal Aaron expects people to believe him it's up to him to provide proof of his claims. Remember, he's been proven wrong about everything so far; why would any intelligent person believe him on faith?

"I don't have to prove anything; I just say it and that makes it true." Aanal Aaron H. Voobner

I agree that there is not a direct safety factor relative to CB radio, although you could make a case for there being an indirect safety impact. For example, safety issues that arise out of CB radios interfering with public service/safety communications. And how about safety issues relating to excessive RF exposures during "keydown" competitions. Clearly there are safety issues that are relative to the proper operation of CB radios.

As far as where does the money come from, maybe it doesn't have to be all that expensive. My original post made reference to a safety/rules course. Instead of making people take a course, why doesn't the CB industry come up with an informational handout that covers the basic safety/regulation issues relative to CB radio operation. Distribution of this handout could be done by the various CB radio vendors before a customer is allowed to purchase a radio. In other words, make the sale conditional on the customer receiving the handout, reading the handout, and signing a statement that they have read and understand the safety/regulation issues. Then they get a certificate from the vendor as proof that they have the basic knowledge needed to properly operate their radio.

CB radio operators as a whole will benefit from a program like this. All new operators will be given some basic education in their hobby - something that right now there is no incentive for them to do. The program could be run

like a boater safety program . I don't need a license to operate my boat but I do need to show proof (in the form of a certificate)that I have a basic understanding of the safety rules and regs. Without it, I cannot legally operate my boat. The program could, and should, be run by the CB industry itself. It would be in the industry's best interest to have a program in place like this. Otherwise, the CB industry will have no defense when the FCC finally loses patience with them and decides to step in and take control for themselves.

Just something to think about.

But I do know the law aganst speeding. Dumb-ass saying because if a person did not know, how can you hold them to a standard that is assuming that everyone knows the law about radio? Do you think that you should be punished if you break some law about say, walking on the grass, where no sign tells you not to. Lets say you, have been walking on that grass for the last 10 years, and no person has told you not to. So do you think that it is good and right if you were hauled to court, fined, forced to do comunity service, and now have a record, but you did not know to keep off the grass?

HARDLY a difference of opinion.

>You're right. that's not an opinion. If you break the law, you are a criminal, plain and simple.<<

If it was plain and simple, there would be no need for court.
B3esides, I wasn't referring to the "criminal" naem-calling. Go ahead and attempt a smokescreen of a defense of your name -calling,..go ahead and assume"criminal" was the name-calling I was referring to...LOL! I see you have now abandoned your shovel in favor of a back-hoe...hahhahahahhahahah!

> The fact that you consider radio law to be petty and insignificant, <<

Ahhhhh, but you would have nothing to cry to papa about, grasshoppah, if you didnn't falsely make such claims. I respect all radio law except for a few minor laws I selectively disregard, such as DX and freebanding on 555 and a few others.
To read your deliberate mis-leading, non-factual whining statement above, one may be so inclined to think you actually knew something, unlike those of us that are familiar with you and know better.

>does not change the facts.<

What you believe has nothing at all to do with facts or the way things really are.

> The fact that many other people break other petty laws, does not justify your position either. <<

You are really frustrated with yourself to go so far as to provide a "justification" for my actions when you failed to elicit one from me.

>But when you are talking about factual information, or defacto standards, if you take a position that is contrary to those normally accepted standards, <<

Facts and "normally accepted standards" are two separate entities with two separate meanings. they are NOT interchangeable..

>Never said they were. I was citing two different examples. <<

No you didn't.....you coined them togetheras the same.....let us take another look, shall we?
YOU said, and I quote :

>>But when you are talkingabout factual information, or defacto standards, if you take a position that is contrary to those normally accepted standards, <<

Contrary to WHAT accepted standards?
Ohhhhhhhhhh..the "factual information standards" or "defacto standards" (whatever warped meaning you attached to those)
Now tell us, Dave, if these standards you speak of were not derived from "facts" they can't really be standards now, can they? LOL!

>it's up to the opposing party to make the case why the standard is wrong.<<

I love usenet...it magnifies and preserves malicious ignorance such as yours for happy guys such as me to use at will.
When a newspaper gets sued, it is up to the paper to prove their info is accurate, not the opposite as you ignorantly wish and wrongly suggest.
The burden of proof has always been on the one making the claims or providing the news.
You are no exception.

> In your case, you need to explain why running illegally should not be considered criminal per the laws set forth by the FCC.
< <

No, I don't. I need explain nothing to anyone. That is where you guys start getting out of hand and losing your temper.

>No, I suppose <

You "supposing" anything is a laughing stock. It ranks right there with your ability to "think" and "guess", which your posts are full of. You have no facts which manifests your frustration level by making such poor haphazard guesses, suppositions, and faulty thinking."

>even you realize the pointlessness of trying to defend something that's undefendable. <<

at providing yourself answers and decidedly claiming they come from me. Really, Hall, get a grip...maybe a job.

>But if you're comfortable with your rejection of radio laws, then you should learn to be comfortable with what you really are, a criminal. <<

I have always been comfortable with myself. You have a problem, evidenced by answering your own questions and misattributing them to another (snicker). That show a real attempt at deceit, but I'm not pointing out anything new, Dave, you've always acted the fool*.
* Disclaimer: totally subjective

>Why should you be allowed to disregard the rules? <<

Hahahhahah....why should "Aaron" be able to disregard TOS? Or Lelnad?

>I'm neither Aaron nor Leland, and you didn't answer *MY* question. <<

Because you don;t dictate what I do.....deal with it, get past yourself, and move on. Or sit here and whine some more because twistie won't tell you why he freebands..the importance I have in some of you guy's non-lives is simply astounding, nothing short of amazing, while simutaneously being profoundly pathetic..

Lawmakers have nothing to do with my behavior. Like I said before, you have no clue whether I break the law.

>You operate on freeband, by your own admission (Your words can come back to haunt you too).<<

How is that "haunting me"? You can't have it both ways, Hall....either I speak the truth or not, but choosing which passages of mine to disregard and which ones to accept as truth is sorth of the same thing you are railing against me for...,,,

>This is an example of how you vacillate.<

No, it was how YOU did.

> First you say that you proudly DX <<

Once again you are called upon to produce such claims. Show the post where I used that word.

>on the freeband (where you feel no need to explain or defend your actions), then you claim that you don't break the law. How can both of those statements be true?<<

I didn't claim I didn't break the law, Dave. I claimed you have no possible way of realizing it either way. This must be confusing for you....you're coming apart at the seams with all kinds of wild claims and misattributions (lies).
Makes you a repeated liar, now does it not?.

>That is breaking the law. I don't think it could be any plainer. So are you are lawbreaker or a liar?<<<

You have already made up your mind.
What I say shouldn't matter.

>In other words, even you can't argue with that logic.<<

I can do anything I wish, free from impotent malcontents that grab on to my life's tail such as your angry misinformed self. If we were to see any logic put forth from you, it may merit discussion, but certainly not to argue.

>But many on here have compared illegal freebanders with the early revolutionaries, who "bravely" defied the law, in order that we could create a better nation. So if you want to be compared to "revolutionaries" rather than petty lawbreakers, then you need to have an ultimate goal. <<

I don't care what I am viewed as.

>I believe that you care more than you let on. <<

About an internet name that was never used anywhere until you and your posse boys named by Arron made me famous? HAhahhahahahahah! If that was the case, don't you think I may have actually CHANGED it after all this time. Don't get me wrong, you boys have made my new handle very well-known on the radio...I guess I owe you gals a sort of "thanks". I get way more contacts than I ever did with a number. I get people almost daily asking me "are you the SAME twistedhed.....?
You really ought to stop with the guesses and beliefs and innuendos and the thinking until you know exactly how to do it.

>The logical goal would be the elimination or changing of the radio laws, that restrict you legally, from doing what you do now.<<

Seer.

>I'm no prophet,<

A considerable understatement, considering you have REPEATEDLY claimed you know what people feel and think, why they act the way they do, and how they operate their radio equipment based on their choice of radio services.....did you forget that jewel? I told you go back further in google...oh yea,,,,,I found some choice-azz insults and namecalling by you in posts you claimed don't exist. Told you that you had to go back further. Nevertheless, you said you haven't been a dick since you were a kid. Your posts show the opposite.

> but honorable people, <

You know nothing of honor. those who do, walk the walk. Another poster pointed out your blindness just the other day.......you really see yourself totally different than others view you...indicative of immaturity, but trust me, one day the revelation will come that you are not viewed in the manner you believe.
Same principle as recording yourself.....to you, it sounds like it isn;t you on the tape, but to another, it's dead-on accurate.

>who attempt to effect change have specific goals in mind.
Like I've said before, many times, I don't mollycoddle people. I don't sugar coat my information. If what I say doesn't sit well with you, prove it wrong, or deal with it.
<<

Oh, I have no problem whatsoever with you. Matter of fact, it is merely the lies and disinformation concerning radio that I
point out. Your personal bullshit is just that, personal, as in "inside yourself". Try as you may, you can't make your problems belong to another and you certainly have failed at blaming others for your deficiencies.

> Posting a contrary OPINION, does not automatically invalidate my information or my position.
<

Never said it did, but getting personal, lying, and making personal and OT comments about folks immediately invalidates your positon

>Not if those comments are true. <<

Oh yes, even if they are true, little one. How does one's p[ersonal life tie into radio? How does one's color or sexuality tie into radio? How does one's political views (which you have drunkenly slobbered over many times) have anything to do with cb?
That back-hoe is doing a fantastic job for you, Hall.

-
Since I have pointed out your
misbehavior you have indeed reviewed your archive collection and the fact that you were repulsed enough by what you saw made you admit your character flaws .

>Wait a minute. Now you're starting to go off the path. I have reviewed some of my past posts. Mostly to see when I really started posting here. I see nothing especially inflamatory in most of what I've written.
<

Which is why they need pointed out every so often.....you fail to see them.

>Because they aren't there.<

(snicker) Okaaay! The group will believe what you now tell us and not what we see.

>You, and maybe one or two other people with low moral caliber are the only ones who have a "problem" with what I say. <<

Stop looking to other people for validation. It places your weak character traits and non-confidence on display.

>Other than the last few "exchanges" that you and I have had, you will find that I treat people respectfully. I may not agree, and I will state the reasons why I disagree, and apply the principles of logic. But I don't engage in namecalling. That's something kids do. I am usually a straight up and to the point guy. I don't make personal insults, unless they were thrown at me first.
<

You are lying again, Dave.

>No, YOU are. <<

Well, I certainly needn't say much concerning your repeated failed attempts at words in my mouth....this thread is chock full of your collapses.

Go back to our very first disagreement in this forum, Dave...you came off like a dick

>A subjective opinion. Whether I was truly being a "dick" or just that you didn't like what I was saying, is a matter of interpretation. <<

Insultive posts becaiuse of anothers views, ccnstitute being a dick. Care to take a poll?

>Sure. You do the work, because frankly, I'm not that interested.<<

Sure. It doesn't take a rocket scientist to know you dislike and are not interested in work. It's probably why you are a weekend part-time father that never married.
A real man supports his family.
Back to business, if anyone feels getting personal and calling names and getting insultive is justified because of one's views, speak now or forever hold your peace. Now you keep count, Dave.

>Like to old saying; "if you don't like the messsage, don't shoot the messenger".

<<

But that is exactly what Lelnad KC8LDO suggested..

>Once again, I'm not Leland, so your point is irrelevant. <<

You used that same analogy with me, Dave, several times...going as far as posing a question to me, ranting about "others breaking the law".and providing yourself an answer and happily convincing yourself it came from me (talk about problems) when in fact, it never did.
I'm not :"others" just like you are not Lelnad, so your point is irrelevant.
Glad to see you opening the "Hypocrite Hall" and recognizing your efforts are pointless and irrelevant.

for no reason other than me stating an
opinion you didn't like, so don't spread that BS here.

>I don't know. I've had other people tell me that they agree with me, and that you're just someone "looking to start a fight".<<

What? Behind the scenes? In email?

>Some E-mail, some right here on the newsgroup.<<<

And your non-point is? Hell, I get email too, Dave, from plenty of hammies. I get email from hammies who won't talk to me here, but in email it's a different story. And ya' know what? It's all good........they know they can trust me. Your repeated attempts at character assassination are exclusive to you, Frank Gilliland, Dogie Adair N8WWM, Lelnad C. Scott KC8LDO, and a few other angry rabid hammies, such as Charles Johnson.....wow! All hammies in a cb room looking for guff! Hahhahahahhaahha! Y'all need to get a life.

From your named friends of Lenad, Dogie, and Frank? It figures you hold their opinions in contrast to what they are....mere interpretations. You have just accurately described your pound pup buddies.

>The fact that you attempt to malign them, in no way diminishes their opinions. They are worth the same as yours or anyone elses.<<

Only by you Dave.
Your defense of them is my folly.

>And others telling me that I'm wasting my time arguing with you. Most of whom do not belong to your imagined "Twisty hate pose'". <<

Right......which is why they are so vocal. Sorry Dave, "ghost" support don't cut it. And if you didn't feel so alienated and defeated, you wouldn't look to others to validate yourself.

>That's funny coming from the guy who's always speaking for the unspoken "majority" of other radio op's and newsgroup posters,<<

Oh, but Dave, I'm dead on with the pulse of cbers. Once again, you are so far removed from reality that your blindness disables any cognitive abilty on your behalf to see perspectives other than what you hold. It's a disability at your age, Dave, really.

> despite no one encouraging word supporting you or your position. <<

you da' one looking to others and mentioning support, Dave, not I. Be very careful playing the loner game....I'm cool as a cucumber on that limb all by myself, but you come across as a lone rat in a drain ditch that hasn't been fed.

>Mr. Pot, meet Mr. Kettle.
OhOne thing is probably true, though, I have damaged my reputation somewhat by allowing you to draw me into these no-win situations. <<

Drawing you? LMAO! LOL! HAhahahhahahah!When you post a lie, you damage yourself, not I.

>You are the only one that thinks what I say is a lie.<<

Missing posts again? You were taken to task by two cbers in the past day other than myself. This is a cb forum and everyone knows your agenda, Hall...it's too late to attempt and introduce a persona to your wilted and stained name and call.

You hear the DX today? HAhahhahahahha....there
were some serious pissed off hammies trying to get through....they just didnt have the azz for it.....hahahahahahahahha!

>How do you know, out of a load of freebanders, who the "hams" are? You can't expect me to believe that they actually used their ham calls on the freeband? ><<

What you believe means squat.

>And you still didn't answer the question.<<

And you continue to get extremely frustrated by my lack of respect by not providing you with what you feel you are owed.....same principle as the respect issue...you got no game, Dave.

>How do you know they were hams?<

Your seer malady is catching?

You think being a smug, disenfranchised, troubled youth are GOOD traits?

>That was 20 years ago. Growning up and maturing from that stage gives me a perspective by which to gauge many other people.<<

Hahahahhaha. Those interchangeable words
again....."judge" does not mean "gauge".

>I know that. That's why I used the term gauge.<

I know what you "said", but this a
prime example of you saying one thing and doing another.....you have
indeed opened the Hypocrite Hall.
You have indeed judged many of us criminals. You are not a court of law
nor have any legal authority (which pains you greatly) like the court to
adjudicate one a criminal, yet you do just that on a regular basis. Even
if a suspect CONFESSES to the crime, he or she is presumed innocent
until JUDGED guilty by a court of law, judge or jury. You are none of
the above. You are i-m-p-o-t-e-n-t, and a liar, as this clearly shows.

>That is a more accurate term for what I do. So don't put words on my
keyboard. <<

You have repeatedly failed with that attempt throughout this thread and
others. I couldn't do it if I tried,,,it's not in my nature.

>The old "been there, done that". I think that overcoming my earlier
"flaws" has allowed me the opportunity to reflect on my own life, and
gives me insight into what people think and why they think that way.
<<
.

..... that is a good thing, a first step.
Your words are there for all to enjoy, whenever they wish.

>And many of them have been quoted in other people's tag lines. <

Yea, it's part of the joke you're not in on.

>Whatever you say..... <

See? And the majority here thought you couldn't learn anything.

>I think my advice and insight have been on the money far more than it
has been off. <<

Stop thinking. It is detrimental when you do it aloud.
Delusions of grandeur. You don't see yourself as others do...that also
has been shown.
Kinda what makes you a funny guy....

>To you. Get it yet?<

Yea,....you're the entertainment....set up like a bowling pin by your
own kind..they hung you out to dry only you don't have a clue yet.

>Once again, you are free to disagree with my assessment of society, and
how it has regressed in recent years, but unless you can counter that
view with something equally compelling, it does not make me wrong.<<

You are right, it doesn't make you wrong, it does however, make you a
socialist.

>I really don't think you know what a socialist is.<<

What you think, or guess, matters to none but yourself.

>Otherwise you wouldn't be making such a ridiculous accusation.<<

It wasn't an accusation, it was an observation based on your posts claiming cb is a reflection of society (remember THAT doozy?) and the notion that your morals and interpretations are what others should conform to.

>Socialism is all about government control. Following sensible rules<<

You are not a judge, therefore not qualified to say what is and isn't "sensible".

>Neither are you, and thereby lies the rub. <

No rub...I never made that claim....it is you that has judged then denied doing so.

>The best you can hope to achieve is a stalemate.<<

I hope to achieve nothing with you, Dave. I know better than to begin reading aloud from Tolstoy to the monkeys in their cages.

>and being considerate of other people's rights, is hardly "socialism".<<

Who said it was?

>You did.<

Once again, I force you to fail by calling on you to produce the passage where I claimed being considerate of other's rights is socialism. Better get busy...you have a ton of claims to back up this time.

> You accuse me of being a socialist, based on nothing but my reverence for the law, <<<<

No, I accuse you of being a socialist because you feel everyone should conform to YOUR handicapped interpretations and flawed reviews of morality and law. Hell Dave, you still feel it's a federal crime to talk skip..how much can one really expect you to know anything you speak of? Your posts are full of false attributions, lies, and plain ignorance, but I really don't hold it against you. As I held before, you were never taught any better. Instead of a loving parent holding you and teaching you, you were being assaulted your grandfather.

>What did I claim didn't take place?<

Your insults and name calling. First you claim it didn't take place, then after dining on more crow you checked your archived posts...then came the shuffle of you DEFENDING what you first claimed never happened. See above,,,you defended it....if you never said it, how can you defend it? Troll on.....

>You lost me. How can I defend something I never said? <<

That's what I want to know and am anxiously awaiting your reply. You claimed you didn't get personal and insultive and offtopic....I showed

you did. You then attempted to spin it with the pathetic and sad defense of "Well, if it's true.....".
There you have it.

>And if I said something that YOU think is an insult, well that's just your opinion.<<

Yup, normal members of society view malicious
name-calling as insultive.

> Me thinks you're way too sensitive for any normal man.<<

At least you are staying true to your failed guessing, thinking, and supposings.

>And yess, I have changed my viewpoint in the last 10 or 15 years. <<

And also in the last
6 months, as I have showed the post where you call us criminals and I have showed where you claimed freebanding doesn't bother you. You have contradicted yourself in so many posts...what is hysterical is you feel I am the only one that sees it, but you have been called on it twice in the past 24 hours and it wasn;t by me. You are a bandwagon hopper, a treetop hypocrite and fairweather liar who happily has the ostrich syndrome.

>Most
people do when they get older. It's called maturity.
<

dave, you have started with me so many times in here, true to form, just like Lelnad, Frank and the other trouble posse members that pledged to cause trouble in rec.radio.cb.

>Who has "pledged to cause trouble". <

You miss the post by Arron that said the group would have to contend with the antics of yourself, lelnad and Frank and Dogie if "Aaron" were suddently to stop posting?
Concerning where it came from, I am certain it wasn't misinterpreted by anyone, even though you now desperately try to avoid the subject.

>I can no more control what Aaron posts then I can control what you post. <<

Doesn't matter. You're on record defending him.
Several times. That says it all, not what you want and wish us to hear.

>And as usual, you misinterpreted what Aaron wrote, and twisted the meaning. From what I remember him posting, he basically stated that if he were to leave the newsgroup, that there would be other people, who are equally disillusioned with blatent lawbreakers, who would pick up the torch and carry on the campaign of education. That's hardly equates to "pledging to cause trouble". <<

Ahh,,I knew you would like to open this discussion. Tell me,,,,,,,,,since you are so well at misinterpreting,,,,,,,,please share your misinterpretation of why he lost several ISP.s
Whoops...ou already did...you equate a violation of terms of service with education. Technically, the terms of service are set forth by the ISP who must comply with mandates governed by the FCC, a federal agency. Infracting such rules is considered a federal crime by yourself, correct?

>Your first class is called "The criminal in me - How to accept and deal with the realities of my activities".<<<

The criminal in you is of no consequence to me, but thanks for the offer. Now I have one for you......."How to not obsess with twisty and his radio behavior and not dwell on what others think of me..101".

>You still haven't passed this one. <

The only person suffering from reality is you, evidenced by your calling DXers federal criminals and your pathetic attempts at answering for others when they don;t provide what you seek. ....just like all babies who don't get what they want, you throw a tantrum that consists of insults, stomp your feet, and whine..

>I know that is not my intent. If you don't like your lawlessness being brought up, maybe you should do something about it. <<

I'm not the one having temper problems, losing ISP;'s and generally whining and demanding for reasons, excuses, justification, etc.....you are.

>I haven't lost any ISP's. I haven't lost my temper. <<

Oh, you call people names out of the self-control you have, no doubt.

>People who have respect for the law, are not the ones causing the trouble. <<

HAhahhahahahahahahha...I am sure they changed ISP's because they wanted to...several times.

>Well, considering that AOL gives out 1000 free hours on a CD, I'm sure that more than one of these guys is taking advantage of AOL's "free" hours.<<

Hahahhahahhahah....do you have anyone in your ghost email that believes that one? Dig, jr., dig.

>When one expires, they install another, and create a new account.<<

Aaron was posting through google via yahoo. Lelnad was posting through Bignet (his 3rd pulled account, possibly fourth).

You drew first blood.

>I would disagree with that. You were the one that started with speculative comments, accusing me of lying, and commenting on my inability to follow your changing of the topics, and accusing me of deliberately steering the topic when I attempted to return to the core topic. That whole thread on respect on the radio, that you kept trying to change into a discussion of USENET ettiquette. It's all there in google. <<

>I suggest you retreat to the safety of mommy's skirt.
Dave
"Sandbagger"<<

Thanks, but when I was referring to a back-hoe, it didn't mean hiding behind your mother's dress.

No, Twist, I've seen it stated that 10 meters is **largely** unused. No, no one stated it isn't used, just seldom used with a lot of wide open space. I really don't feel like searching the archives ...
==========
No need, Jim. I too, have seen it stated that 10 isn't used, but I haven't seen it used as a defense to intruding there.
==========

>I have seen it stated (roughly quoted that it is hardly used). In fact, it may have been on UJs site. There are a couple of junivile delinquents loose there of late. I don't know what post got me started - usually I let the other guys take the blood pressure medication. Myself, I'll just have a 6 pack and leave this whole mess alone for a while. I saw one good post and believe that is closer to the truth than most care to admit. A lot of places sell radios. A lot of folks don't know what all those 'uppers' and 'lowers' are, other than extra channels. Oh well, on to the 6 pack. ;)
73 from Rochester, NY
Jim<<<
<<<<<<
==========
You're probably right...plenty don't know what those buttons and switches are for. Those that do are not usually your type venturing into 10 meters,,,that I think we all can agree on.

I got to thinking about the Gentlemans Agreement WRT channels 36-40 being SSB only. That got me to thinking about other agreements.

In most of the country, drivers use 19 to converse with each other. Here in a good part of the central valley, they run 17. It's my understanding that down near LA they run 14. How did all of this come to pass? Some of you guys have been on CB a LONG time, so maybe you can fill me in. How in the world was it decided that 19 would be the trucker's channel of choice nationwide? How in the world did such a notion catch on? Even more perplexing: How did 17 become what 19 is in the rest of the country? This has always been a huge question in my mind.

I've always guessed that some large organization (perhaps the teamsters?) would have gotten the word out. Or maybe some widely read publication at the time, I don't know.

In Modesto, CA there is always some nut case jamming 17, making communication on 17 near impossible. I've always wondered why drivers didn't just switch over to 19 in circumstances like this. For it to be effective, everybody would have to know that switching over to 19 (or whatever) is standard protocol. If only a couple of guys do it, it doesn't really work. That's why I wonder: How were these agreements reached so many years ago?

Thoughts?

> nocode JJS a nocode JJs a nocode <g>

Maybe you could clarify just what you mean. The FCC took 11 meters
in hopes of creating business band for those who could not
justify the cost of obtaining a fixed frequency assigned by the
FCC and the cost of high dollar two-way radios. Those frequencies
were not being fully utilized by the hams as they mostly used 10
meters. Unfortunately some cbers, due to their lack of regard for
any rules (do you fit that category?) and regard for other users
eventually turned it into what it is today, a garbage band such
that even those who wish to use it legally have a hard time doing
so.
I have never, in 40+ years of ham radio heard another ham complain
about the loss of 11 meters.
As far as this no code thing you seem to be so hung up on (and
which you cannot achieve), keep saying it over and over if that is
what makes your day, but I was licensed long before no code was
ever thought of.
And even with you disdain for no code licensees, at least they do
hold a license, something you cannot achieve and they don't have
to operate illegally which you do and seem to be so proud.

Now...
twistie operates illegally!! twistie operates illegally!! twistie
operates illegally!! twistie can't even get the no code ticket!!
twistien can't even get the no code ticket!!! twistie can't even
get the no code ticket!! LOL
Sounds just as childish as you doesn't it.

There are probably laws that you don't know about, but break one
of them and you are still accountable. The judge will just laugh
when you when you say you were not aware of such law. Same for the
truckers, if caught the excuse that they did not know they were
operating on licensed frequencies will not hold water. Ignorance
of the law is no excuse. You are still accountable even if you
think it is a dumb assed saying.

Not true. 11 meters was home to a lot of early RTTY and FAX modes as
well as phone and CW. There were many hams that were uspet by the
loss of 11 meters.
In fact there are still some old timers that will not have anything to
do with CB today simply because of the loss of the frequencies to
amateur radio.

Jim,
You might be right about there still being some
old timers around from when the 'turn over' happened.
But they are very few, and very far between. With
all the other changes that have happened since then,
being upset about 'giving' 11 meters to CB is just
a bit silly...

It is up to the operator to know the proper use of his equipment,
if uncertain, then he should ask. Ignorance is no excuse. The cb
industry does no want to educate it's users, to do so would mean
they might not sell as many illegal radios and amps.

There's no need for a CB radio that covers the 10 meter ham band. I
think everyone agrees on that. The other issue is where truckers get
their info about CB. Probably two places; from other truckers, and
from the CB shops and "techs". I'd really like to find out what info
truckers are given about 10 meter operation at the "point of
purchase". Are they told "don't go above channel X on band X"? Are
they told the FCC is a big joke and nobody gets caught? Or are they
given any info at all?

(snip)
> Why not require cb users to complete a basic RF safety/regulation course
(snip)
CB (operated legally) does not require any knowledge of RF, regs, and
safety. The legal version of CB is simple and foolproof, i.e., push
the button and talk on channels 1-40. The CB gear itself (low power,
limited frequency) is designed to stay within the CB band and not be
tampered with. It's the illegal/tampered gear that requires knowledge
of where the ham bands are and where not to stray into.

My guess is they aren't given any information at all mainly because there is
no incentive nor requirement to give out the information.

> CB (operated legally) does not require any knowledge of RF, regs, and

I agree with you that a legally operated CB is not the issue - the problem
is with the illegally operated CBs. The point I was trying to make was that
perhaps a good portion of the "illegal" operators are not aware that they
are "illegal", simply because they don't have they knowledge to be able to
determine what is "legal" and what is not. They might not be aware that a
modified rig is illegal - some of their friends have a higher power unit or
one that operates outside of the band, so they want it too. Certainly, a
minimal amount of effort on the part of the CB industry to educate its users
will go a long way to rectifying the problem.

Actually no, the shop is inside a truckstop and they sell the radios.
He's a seperate business inside the truckstop.

I do know all of what your talking about as far as peaking & tuning the
radio. But I was always under the impression, as most people are, that
older radios were more "peakable".

Most of the throw-away radios made today can't be peaked to any
noticable difference as I understand it...maybe I'm wrong on that. I
always thought all of your older radios could be improved noticeably though.

Am I wrong about this?

This radio I bought is real nice. It has two meters on it, the second
being a modulation meter. It has that silly Delta-tune which I've never
noticed doing a single thing. It has a two position attenuatuer, which
is ,I guess, the next best thing to a dial. Unfortunatelt the ANL and NB
are on one position on the switch, I prefer a two position switch or
better yet, a seperate switch for each. I don't care for how much signal
you lose when using the ANL, certain situations it's a charm, but many
times it's just to much and the NB would take care of the noise by itself.

To start with, a copy of the CB rules is required to be included with
every new CB radio, and are available from the FCC just by sending
them a letter. Also, there are about a jillion websites with the CB
rules posted, and a jillion more explaining that it's illegal to
modify your CB radio for extra frequencies. And you don't even need
the US mail service or even the internet to find out, just ask someone
on the radio. Even just LISTENING to the radio is enough, because the
conversation comes up at least once each day. But if THAT isn't
enough, the FCC usually sends a warning letter before issuing an NAL,
giving the offender the benefit of any doubt that what he is doing is
illegal.

Now quit being a "dumb-ass" and stop with the lame excuses.

might be more appropriate?

Why many truckers read this Ng it is not only about Truckers and there CB radios on 10 meters it is about anyone who is a Cber and uses un authorized freqs besides this is a CB NG, a trucking NG he may find truckers that don't use CB's many truckers don't use CB's. I think this group is more than appropriate. the truckers who read it can tell a friend.

In theroy yes. But in the real world we know different. I can tell you as an owner of MULTIPLE Avanti Sigma 5/8/Sigma IV/Super Scanner/etc (still in the garage), there is a difference in the antennas.

The magic is in the feed point! The fact is, the Interceptor 10K gets more of the signal to the 5/8 element than any other antenna I've seen.

As I'm sure you know, a 5/8 antenna needs a matching section. As I'm sure you know, most matching sections (coils) use energy.

As I'm sure you know, a BETTER matching section will get MORE signal to the antenna.

The I10K gets more of the signal to the antenna! Worth every penny!

companies. All these >volunteers

Number one will be read and number two will be disposed of, possibly
pinned to the office bulletin board as a dispatcher's laugh.

There would be no difference in the appearance of either one. The letters
would be form letters on
FCC letterheads just like they send warnings on. All the volunteers would
do is send them out from
a list (compiled by ARRL??). The recipients wouldn't be able to tell any
difference.

Dino,
You're right, I do know. You'll notice that I qualified my statement too, about the mechanical differences. The different methods of matching an antenna are identical electrically, they differ mechanically in how they produce the reactances needed for impedance matching. There's also a mechanical difference in their construction, some use better construction techniques than others. I do have to agree with you about Jay's antenna seeming to be better constructed than the others, at least from what I've seen of them.

JJ droned on with:
Maybe you could clarify just what you mean. The FCC took 11 meters in hopes of creating business band for those who could not justify the cost of obtaining a fixed frequency assigned by the FCC and the cost of high dollar two-way radios. Those frequencies were not being fully utilized by the hams as they mostly used 10 meters. <<

So far so good.

>Unfortunately some cbers, <<

You missed the time-line entry of cb.

>due to their lack of regard for any rules (do you fit that category?)<<

Not at all. I obey all radio rules with the exception of DX and a little freebanding with less power than most hammies use on 10 meter.

>and regard for other users eventually turned it into what it is today, a garbage band such that even those who wish to use it legally have a hard time doing so. <<

Propagation, nothing more.
You know very well all the power in the world ain't gonna skip when mother nature says no.

>I have never, in 40+ years of ham radio heard another ham complain about the loss of 11 meters.
As far as this no code thing you seem to be so hung up on (and which you cannot achieve),<<

Again, I assure you..the nocode ticket would be useless to me. There is way more interesting things happening on other freqs than where a nocode may venture.

>keep saying it over and over if that is what makes your day, but I was licensed long before no code was ever thought of.<<

Just because you offer your own version of banality concerning my status does not make it true, but keep saying it over and over if that is what makes your day.

>And even with you disdain for no code licensees, <<<

Tut-tut...I have no disdain for nocodes...let's stick to the facts, shall we?
I have disdain for CERTAIN nocodes, and have said nothing negative concerning nocode status except as construed by yourself and Dave

"Hypocrite" Hall. What I HAVE maintained concerning nocodes, is that it takes no real effort to attain one, and that it is no achievement for one of normal intellect. It does not make one "better" than a cber in any way shape or form and only arrogant and pious individuals feel it somehow elevates them above those who choose a radio hobby other than hammie.

>at least they do hold a license, <<

LOL! Maybe the seer title should go to myself.....again, only pious and arrogant individuals believe that makes a difference in a persons individual caliber..

.
>something you cannot achieve <<

Keep saying it over and over if that is what makes your day....

>and they don't have to operate illegally which you do and seem to be so proud.<<

(funny, Hall said the same thing.....wow...challenged minds do think alike.!) Call it what you may. The fact that you girls have tried in vain and failed every time at hacking me, sending me viruses, forging me, threatening me personally and even threatening the group if I didn't go away, not to mention devoting so much time to little old me,.....yea it makes me proud that you have failed in every effort and the troublemakers have lost ISP's at a mind-numbing rate. Hint: It wasn't JUST Frank and Lelnad,,but it WAS angry, personal problematic hammies who have since chilled and yea, I guess you can say I am as proud as their failures as JerryO is of claiming a hand in trucker busts.

>Now...
twistie operates illegally!! twistie operates illegally!! twistie operates illegally!! twistie can't even get the no code ticket!! twistien can't even get the no code ticket!!! twistie can't even get the no code ticket!! LOL
Sounds just as childish as you doesn't it.<<

Yea, but it was *meant* to.....hence the <g>, widely accepted as the emoticon for "grin".
I can laugh about it.....something some of you guys apparently forgot how to do.

Wrong again, Georgie-girl, but we expect that from Aanal Aaron
wannabees like you. He made the statement, it's up to him to prove it.
He offered to "Gladly" post his proof, but hasn't done so yet, after
more than a month of posturing and spamming the newsgroup with garbage
and doing his famous patented "chicken side-step".

BTW, it's "squarely", dimbulb. And YOU have said that you know I'm NOT
"Steve", so how are you helping your dumb buddy Aanal Aaron the liar
and coward, who has been proven wrong about everything he's ever
posted?

"I don't have to prove anything; I just say it and that makes it
true." Aanal Aaron H. Voobner (and lackies, including Georgie-girl
Busch WA3MOJ).

It is up to the operator to know the proper use of his equipment, if
uncertain, then he should ask. Ignorance is no excuse. The cb industry
does no want to educate it's users, to do so would mean they might not
sell as many illegal radios and amps.
==========
Who is at the helm of this "industry"?

3498. Re: 10 meter intruders - Another solution to the problem?

There would be no difference in the appearance of either one. The
letters would be form letters on
FCC letterheads just like they send warnings on. All the volunteers
would do is send them out from
a list (compiled by ARRL??). The recipients wouldn't be able to tell any
difference.
Jerry
==========
If that were the case, and they contained Hollingsworth's signature or
some official seal of the FCC (An image of a CB tuned to
channel,,er,,freq.27.555? Just kidding!) they would get read.

I think I get what you're saying. But the problem is this: the "CB industry" has been providing its customers with radios that operate on ham frequencies. If they gave purchasers an 'educational course' what they'd really be doing is giving people info on "what not to do with these illegal radios" --- radios which they shouldn't even have in the first place. What I'm saying (and this is why I mentioned it up front) is that there is no need for CB radios that cover the 10 and 12 meter ham band to be on the market.

CB falls within the 11-meter band. Many CBers (Myself included.) refer to it as "11-meters." No biggie. Feel free to substitute CB for 11-meters in my statement below, if it so pleases you. The "hobbyists" mostly use the term "11-meters." Hope that answered you query.

>
>Am I wrong about this?
>

sorry your wrong on this one if you are reffering to output power. none of the cb's will show much of a noticeable difference in power out. they can all be "tweaked" if you would but not all tweaking is in a good nature. most shops clip the modulation limiter and do mods to the radio which lower the deadkey and make it swing higher which basically shows a higher reading on the watt meter but makes your audio more fuzzy. if your goal is to have the best sounding radio as opposed to the most powerfull one then aligning it back to factory specs is best. and if you need more power then buy an amp. dont try to tweak and peak your radio to death. you cant squeeze blood froma turnip

I don't think Jerry's playing "wannabe" anything. He just fed up with the illegal intrusions into the 10-meter ham band...and rightly so. I'm not sure this is the correct forum to target, but that's another story.

Speaking of "wannabe field agent," here's a little something we can ALL chuckle over. I found it advertised on the ARRL website.

Well, I am sorry, but I wouldn't be caught wearing that thing! I am not a
wannabe anything except
a retired railroad man enjoys my free time. I AM, however, fed up with the
people that steal frequencies, and operate on bands they have no business
on. What I WILL do is write letters, net-work with the right people,
monitor the bands, make suggestions to the powers that be, and report
any trucker I can prove is operating on 10 Meters.

Jerry
==========
The crux of it again.......most of that I can agree on. But how does, say, a freebander (26 to 27.995, for the sake of argument) have anything more to do with you than the party pirate at say,,,oh,,,,,86.9 FM?

Here you go. By the way, although annoying what the person may be
doing
it is not against Comcast's AUP. Just ignore the person! I swear
there
should be an international law that requires people to take a test
before getting internet access!!

First Question:

If someone is avoiding your killfile you should
A. Stalk them
B. Cry to their provider
C. Ignore them
D. Call the police

And the correct answer is "C".

You know, fellas...Jerry makes a good pont here. Now's the time to write
your reps re. WHATEVER irks you. They're all vying for their
jobs...LITERALLY! Whenever I get one of those "vote for me" pamphlets in the
mail, I write back re. my views on the 155.3 mi. limit restriction on the
CB. It doesn't matter if I'm going to vote for 'em or not. Someone's going
to get the job...and perhaps...just maybe...one of 'em will shoot a memo to
the FCC inquiring about it. Hey, you never know.

The point is instead of just ignoring any posts from someone that
annoys you, like the reply to you message said to do, you choose
to attempt to whine to someone's ISP that some big bad boy is
changing his id to avoid your killfile. Just like my posts, if
they cause you to get your shorts in a wad, just ignore them.

Here is the quiz again, see if you can get the correct answer.

First Question:

If someone is avoiding your killfile you should
A. Stalk them
B. Cry to their provider
C. Ignore them
D. Call the police

And the correct answer is "C".

Why do you post to a ham group? Are you a ham?

So you're not a ham, but you post to a ham newsgroup. According to
your replies to me on the cb group, I should not post there as I
do not operate cb. So why are you here?

Here's an amazing and useful fact. You're free to respond or not respond to what's in this NG. You can click on a post and read it, or not click on it or ignore it. You can comment on it, or you can not comment on it. It's called freedom of choice. We all have it.

Oh sure; I also listen to 14.313 and 3950 at times. Have you bothered?
I've been monitoring the low end of 10 meters lately and haven't heard
anything that sounds like an out-of-band CBer or trucker yet. In fact,
I've heard no hams there, either; they must think the band is closed,
which is strange because I'm hearing activity on CB.

And your original comment IS an assumption, "the most heavily and
blatantly abused part of the spectrum -- the Citizen's Band". Prove
it.

How about the most USED part? The fact is that there are 30 to 40
million CBers crammed into less than ONE megahertz, compared to less
than ONE million hams spread out all over the spectrum. I'm willing to
wager that the proportion of "illegal" operations is roughly the same
in both groups; the NUMBERS will of course be higher on CB, simply
because there are so many more people trying to use the band, but
proportionatly it'd be about the same. The hams have nothing to smile
about, do they
****

OK Richard you claimed a fact and have yet to prove it what are you waiting
for? I was told in a secret email that if you ever prove this perhaps aaron
will post proof of who you are. Now is the time to prove your *fact* to be
correct, we rreally want to beleive you

--
If you expect people to believe you,
it's up you to prove your correct.

Richard Cranium

Newsflash Mopehead, you are also cross posting to
rec.radio.amateur.policy which, in case you missed it, is a ham
newsgroup. I ask again, if you're not a ham, why do you post to a
ham newsgroup?

Newsflash - check your newsgroups. You're both posting to both rec.radio.cb
and radio.amateur.policy. I'll admit Windows is nasty, but check the
headings. As far as Mopar, 30L-1? What's wrong with a Henry 2K? Had a lot
of fun with that one on Guam.

Doc, I might have tried twisting some nerves in an earlier post, but you have hit it on the head. Of the few that remember when 11 meters was an amateur band, likely more that 50% don't care. It was a garbage band (industrial, scientific, and whatever they called it). Good grief, I doubt many are still around that actually used it. I could be wrong, but we'll stand by for the flames (putting on my asbestos long johns).

Mopar, there are a few (at least one that I am well acquainted with) that started with amateur and then had a ball with CB - even though they kept (or regained) their amateur license.

We don't fall under the US rules for antennas. Each community has the right to pass its own laws regarding antennas and what the community regard as an eye sore. The laws were put in to place during the CB boom of the late 70s banning all antennas over 12 feet off the ground. This nailed all CB and Ham base antennas of the time as that they were viewed as eye sores and blocked the views. Unfortunately this law even ban satellite dishes including the small dishes that are now so popular. That part of the law was just overturned a few months ago and with the collapse of CB the rest of the law may fall soon and the Hams may once again be free to put up base antennas but not until CB and its BIGGER IS BETTER attitude is gone.

Source record: 142336
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc,rec.radio.cb

I need the following listening frequencies for my Bearcat III scanner...

155.415
153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

If you have more than one of the above, please let me know as I might also restore another Bearcat III and a Bearcat IV. I would like to trade or buy cheaply. I have the following 10.8 IF Bearcat crystals (listening frequencies) for trade...

33.940
33.940
39.780
39.820
45.220
46.380
154.250
154.860
155.010
155.085
155.100
155.250
155.250
155.595
159.090
159.890
162.475
453.500

Thanks,
BTJustice

>
> Am I wrong about this?
>
Yup. Even you could squeeze 20 watts carrier power out of it, AND
modulate it 100% (both highly unlikely) the difference would be
negligible at the receiving end. You MIGHT be able to squeeze 8 watts
carrier out of many older radios (even then I wonder), but why would you
even bother? It's illegal and practically pointless, and does nothing for
your receive either.

> This radio I bought is real nice. It has two meters on it, the second
> being a modulation meter.
>
If it's a nice radio, then leave it alone. Don't let that guy tinker with
it.

Here's something you might think about, and I'm serious about this: How
would you determine if someone was qualified to "tweak and peak" your
radio? What precautions would you take to ensure that the person
modifying your radio illegally knew what he was doing before he took the
cover off?

Everybody wants to sqeeze as much out of their equipment as they can,
myself included. Just be careful, and educate yourself as much as you can
before you let somebody sweet talk you into having your radio illegally
modified. By the way - lots of people do wonders on just 4 watts and a
really nice antenna.

Hey, I've been tempted to crank up the power on my radios lots of times. It's just so easy. But one day, I stopped pondering such an excersise. I said to myself "Alan, you have a wattage addiction. You need help". It was ruining my marriage, and destroying relationships with my family. My wife would attempt to reach out to me saying, "Honey, don't the other drivers respect your rig anymore?" I could only cry in shame, uttering "Nobody likes a 'lil 'ol mud duck like me, anymore". I new that I needed to do something. If not for me, but my family.

It was almost over for me, but then....

...I went down to Guitar Center and bought a friggin' huge tube amp. No longer do I wake up at night in a mud duck induced cold sweat. I jumped up on my rooftop and screamed "I'VE GOT WATTAGE! AHHH HA! HA! HA! HA!".

It didn't end there. "I can play War Pigs at concert levels!!! Do you hear me world? FEAR MY SG!!", I screamed. I've never felt so alive.

My big strapper jones has subsided. Fender tube amplification saved my life and my marriage. Now, when I feel the urge to turn up the radio I reach for the SG. It was a simple two step program: Buy amp, plug guitar in. It worked for me, and it can work for you.

going from 4 watts 100% mod to 20 watts 100% you would notice a difference however 20 watts dead key with 100% is not possible with a cb. the best thing for him to do would be buy a palomar 225 and be done with it. its good for about a 6db increase over a barefoot radio wich is about 2 s units on most cb's and is a very nice product that runs cleanly and doesnt take more than about 20 amps to power it all the way.

>Yup. Even you could squeeze 20 watts carrier power out of it, AND

Where did this come from? My server must be dropping posts again.

For the record, there is a difference between jamming a repeater, which serves the needs of many users, and plugging the ears of an overly obnoxious CBer, who's inability to operate properly, is a detriment to the rest of the community. In the former case, the jamming is creating the interference. In the latter case, the jamming solves it.

Call it vigilante justice if you will, but since the FCC saw fit to abandon the CB band, many of us had to resort to tricks like this to keep the animals at bay.

At least planting a low power jammer, did not require property trespass, or destruction of property (like many who brag about tearing down antennas). Furthermore, running at a power level of less than 100 mW, makes the device fall under part 15 rules, like a kiddie walkie talkie.

And you don't think there is any synergy going on between the two? I'm sure they both pat each other on the back. I'm sure his comments maligning your radio, was done with the intent of swaying you to buy a new one, which was also available (how convienient) next door.

>

>
> Am I wrong about this?

Yes and no. There is some difference between certain models and circuit designs. Some radios have a little more headroom, that you can peak up to. But no radio can be peaked such that a major difference in signal would be observed by a casual listener. You really have to get to around 15 watts carrier (Which will require 60 watts peak at 100% modulation), before you start seeing any real noticable gains.

Ironically, when someone finally realizes that a simple peak job isn't making the difference they had hoped, they then want to get an amplifier. At that point, it's best to turn the power of the radio down to around 2.5 watts, as modern CB transistor amplifiers overdrive very easily, and the modulation becomes distorted.

> This radio I bought is real nice. It has two meters on it, the second

Sounds like a good radio. You might want to get to checked out (By a different shop) to make sure that it's still on-frequency, and that the receive and transmit circuits are running at optimal tune. The components in electronic devices drift as they age, and that could cause your radio to drift from its original tune.

The other thing to keep in mind is that older 40 channel radios are also easier to modify for extra (illegal) frequencies, if that's your bag. I don't remember the exact frequency range of your radio, as I haven't seen on is quite a while. I'm sure there is a chart somewhere on a mod website that will tell you though.

Yeppers, "report any trucker" jerry, you need to find a different hobby. You say you have nothing aganst truckers, you lie. If you would look around, you will find that trucklers are a very minor part of the radio worlds problems. But YOU use the trucker line way too often for someone concerned about radio. You are a worn out choo choo guy. You have had a hard on for truckers for far longer than they have had 10 meter radios. Transparent dude.

Your point looks like you got schooled asshole LOL trying to find a way to
silence me LOL and Comcast doesn't answer your emails LOL The funny part is
you are trouble Moped, that's probably one reason why you x-no archive your
posts. Thanks JJ for providing the laugh he has been taking notes from
Landshark on how to cry to ISP's and the best part is there is not a damn
thing they can do about it they have been trying to silence me for close to
2 years. I used to think Moped was some kinda tough guy now I see he is just
a pansie who has no balls.

Ya know what I find funny, people get mad at Jerry or who ever else dis approves of illegal operation they get mad at him for telling Riley. But isn't it these same Jokers from this NG who all try to rat people out to ISP's, gogle etc. But it is ok for them to do that, but you sure better not say anything to Riley LOL. The best part is Moped and landhark are the 2 main crybabys to isp's and they are 2 of the biggest crybabys regarding Jerry catching 10 meter intruders and telling Riley.

So my question is really why is it ok for them to cry to isp's with no luck of course, then they get mad at jerry, aaron, JJ etc when they hear Riley is gonna be notified. Moped do me a favor and write to Aol nebo keeps changing his nics and he is doing it to bypass my killfiles, oh Randy is buying accounts and screen names report him to Road runner, better yet let me get a hankie out for you so you can wipe the tears from your eyes I hate to see a grown man cry. LOL

LOL I thought that tough guy image you try to portray was a front. You nothing but a panty wearing sissy.

Possible replys by Moped:

"oh yeah asshole come to Medina"
"thats it lets put the gloves on"
" ill kick your ass with my Collins"
" ill rat you out to your ISP"

--
If you expect people to believe you,
it's up you to prove your correct.

Richard Cranium

Here you go. By the way, although annoying what the person may be doing
it is not against Comcast's AUP. Just ignore the person! I swear
there should be an international law that requires people to take a test
before getting internet access!!

if your meter was full scale and it seemed like a 20,000 watt signal it was probably the man himself. the real 22 steel around the great lakes has no daily competition. only time you'll see him get it if one or two boys around chicago fire up the long noses which doesnt happen often.
==========

Shoot, I get those signals daily....biggest signal I had yesterday came from 328 in Pa on Lake Erie.....next time I'll make a point to ask 22 specifically.....seemed like a whole buncha guys from Chi town were trying yesterday, yelling about Fla stations with no ears, but only one managed to get up and really get it done.....I am currently kicking around an idea a local hammie has for placing a semi-small fiberglass yagi on the boat (rotated by hand of course).....he claims he did it for years....hmmmmmmm.....wonder how much more gain I can get...maybe a longer tether to the anchor for a deeper ground <g.>

This is from a estate and I am taking reasonable offers or even trades . So
if You see something here that You like , Make an offer.

Heathkit vfo model # hg-b10 with manual . Works and clean
Heathkit transmitter model # dx60b with manual clean and works
Drake r-4b receiver works fine but needs vfo calibrated
Ameritron model # rcs-8v remote antenna switch works
Swann Astro 150 with matching power supply and speaker . Power supply works
but radio doesn't . it comes on but no transmit or receive . This problem
was caused by keying another radio too close to it
Kenwood ts 120 hf rig works great on 20,40,80 does not work on other bands
Kenwood tw-4000 dual band mobile works
Kenwood 2mtr mobile with te-64 tone control works
2 brand new mc320 mic elements for the d-104 mic
Mfj model 931 artificial ground , works
Dosy tc-4001 test center . works

If interested email Me @ dogyham@hotmail.com
What doesn't go here will go on ebay.

Where did this come from? My server must be dropping posts again.
For the record, there is a difference between jamming a repeater, which serves the needs of many users, and plugging the ears of an overly obnoxious CBer, who's inability to operate properly, is a detriment to the rest of the community. In the former case, the jamming is creating the interference. In the latter case, the jamming solves it.
Call it vigilante justice if you will, but since the FCC saw fit to abandon the CB band, many of us had to resort to tricks like this to keep the animals at bay.
At least planting a low power jammer, did not require property trespass, or destruction of property (like many who brag about tearing down antennas). Furthermore, running at a power level of less than 100 mW, makes the device fall under part 15 rules, like a kiddie walkie talkie.
Dave
"Sandbagger"
==========
Nice work in eliciting the truth from the "hypocrite" Hall. First time he admitted to being a federal criminal after attempting the martyr role.....
His intellect is also waning badly. There is NO difference as far as the FCC is concerned..jamming is jamming and it makes you a federal criminal (according to your own words) anti-social, and your mind is full of criminal intent and contempt. The hypocrisy shines in this statement as you choose what rules are ok to disregard for yourself while accusing others doing the same thing of being a federal criminal. Your words always do the best job of putting on display your contemptuous self.

Actually, it is you that is redundant in your posts to me......hung up on my status or nonstatus... As usual, a tick has developed that allows you to dish it out but not take it......in plainer words, what you give to others upsets you greatly when you are on the recieving end.....

Tut-tut...I have no disdain for nocodes...let's stick to the facts, shall we?
I have disdain for CERTAIN nocodes, and have said nothing negative concerning nocode status except as construed by yourself and Dave "Hypocrite" Hall.

>No disdain for the nocodes you say...let's stick to the facts. Here is your posting of:
Subject: Re: Personal Call with the man
Date: Fri, 16 Aug 2002 14:00:55 -0400 (EDT
From: twistedhed@webtv.net (Twistedhed)
Society has been intentionally
dumbing down and walking and chewing gum is regarded as some type accomplishment, such as some getting the nocode entry tcket as such. Neither is the case, so the only solution is to ban cell phones while driving. <<

Boy, you snipped the hell out of that...try it again, in proper context (that means in it's entirety with the proper post it was a respponse to). Taking part of a post and placing it in another context will almost always change the original meaning....but you knew that all along.....
All you did was reiterate what I have always maintained...the nocode ticket is no real accompilishment for those of normal intellect. Since you view it differently, conclusions drawn concerning yourself are apt to be correct.

>Words like "dumbing down", "walking and chewing gum is regarded as some type of accomplishment such as some getting the nocode entry tcket (sic) as such". Sure sounds like you have negative feelings for the nocode status to me.

<

Sure, I'm on record as saying the nocode ticket carries no weight and is no accomplishment...it isn't. If that bothers you, so be it. It doesn't make it an accomplishment merely because you get pissed over it.

>When are you going to learn to post without so >many blank lines in you post?

When you upgrade.

post?
Webtv sucks for Usenet.
--

Sorry Twist,but it's the truth. You'd think m$n could give webtv a
useable newsreader client.
I think they want you to stay in their firewalled little world that is
known as alt.discuss . Deja's free newsreader is 10 times better. Gates
doesn't want his customers talking to us regular folk. <g>

Hey, I know several who bitch about it, but in all fairness, I have seen
the posts from other servers and newsreaders and the problem can often
(NOT ALWAYS) be rectified with configuration settings.... Google takes
a full day for the posts to show up when accessing from webtv...way too
long. I have checked out several other services (for that pc some day,
maybe) and haven't seen ANY that is set-up similar to MSN's format of
usenet...this format is by far the easiest I have come across yet. If
you know of one that displays in a similar manner and delivers AND
dispays new posts to usenet immediately , I'll try to check it
out.....have you messed with webtv since MSN took it over? The few
things I can't do, I have no interest in...videos, etc......there are
now printers, cameras, etc. for webtv.............I'm not into buying
non-essentials and for the time being, it serves my needs.

Ya know what I find funny, people get mad at Jerry or who ever else dis
approves of illegal operation they get mad at him for telling Riley. But
isn't it these same Jokers from this NG who all try to rat people out to
ISP's, gogle etc. But it is ok for them to do that, but you sure better
not say anything to Riley LOL. The best part is Moped and landhark are
the 2 main crybabys to isp's and they are 2 of the biggest crybabys
regarding Jerry catching 10 meter intruders and telling Riley.
==========

Now this is obviously a troll post, Jerry and I exchange
e-mail's on a regular basis, so troll away George. Please
find any post I've made concerning Jerry telling R.
Hollingsworth and getting upset over it. I couldn't care less
what he does concerning 10 meter band, that's his gig, not
mine.
So who's crying now? not me George, you are. Apparently
you might have gotten a warning, LMAO!!! If you stuck
with one screen nic, people would have you kill filled then you
could go on with normal postings. But you change your names
to by pass filters, troll the newsgroup and do nothing but
throw out insult, harass, accuse people, post racist comments
and do what you do best TROLL!! So quite you're crying!!!

Not true.
The angry hammies here started this bullshit and made it personal.

No Twist it's not Hams, they are trolls, license or not,
TROLLS!

They
have no self-control evidenced by the those shining personalities we are
all familiar with who have SUDDENLY decided to change
ISP.s...hahahhahaahahah... the latest loss coming from the poor bastard
hammie in the black gold....hey,,,it's not the cbers that can't live in
harmony, here...it's ratdogs like the ones who can't behave themseves
and keep losing ISP's........

Well Twist these trolls do nothing but look through the archives and then
post it in an attempt to avert attention
away from themselves. Like a cornered politician, they
throw out accusations at the others, that way their crimes won't look as
bad.

I'm not quite sure why we drive on the left hand side here in the UK. A bit
silly really as all the other European countries drive on the right.
Personally Jim, I think all the other countries should be made to drive on
the left ;-)

As for the channels over here, 14 was the calling channel and 19 the
truckers channel. It's shows how stupid some of the Cb'ers are over here, as
they now insist on using 19 as the calling channel, truckers channel and
modulating channel. Thirty nine empty channels and they're all screaming at
each other on the 19! Even the music players and dead keyers are moving
elsewhere :-)

No wonder Cb is virtually dead over here.

Regards
tox

Not sure I follow. I'm not really interested in the "freebanders" so long
as they don't
alight on one or 2 of those 26 MHZ frequencies. Right now, I am just after
the people
that are on the ham bands. (BTW, I am awaiting a reply from Greg Walden
now).

NOPE. IF there weren't truckers operating on 10 Meters, I wouldn't be
trying to get something
done about it. If the intruders were unlicensed zookeepers, railroad
engineers aboard their trains,
accountants--whatever group--I would be after them, too. It has nothing to
do with the fact that
they happen to be truckers; it is just that the ones who are doing it are
identifiable as truck drivers.
And I ain't worn out yet. I am 54 y/o. I got out via an early retirement
option. Put it this way: if
you could continue to work and make X amount or go home and make the SAME
amount (after
taxes) that you took home working, what would YOU do?

Sorry to butt in for a second, but I honestly believe you hit the nail on the head. Any group - cb, ham, even police - will have their problem children. Proportionally, they are likely to be very similar between the hams and the cbers. I'll be looking forward to other replies to your post. ;)

I think they know more than they're letting on, Jim. When someone buys
a radio at a truckstop that comes in a box that has a sticker on it
that claims it's a "10 meter amateur radio", the buyer knows that what
they are doing is outside of legal CB. My guess is that they have
heard from the "techs" and from other drivers that 10 meters is empty
and no one cares if they talk there or not (or some story similar to
that). Since fellow CBers/truckers don't or won't take responsibility
to correct this misperception, it really is up to hams like Jerry to
get the word out to the trucking world, even if it means getting their
attention via some well-deserved busts.

Come to think of it, Mopar, we had a KWM-2 and a 30L-1 in the second position of that shack on Guam. It was a 75S-3 and (dang, getting old ... can't remember) whatever with the Henry that was in position #1. Position #3 was a Heathkit transmitter and two receivers for diversity reception (between two antennas - one at 60 feet, the other at 102 feet) which we used for RTTY. I had a ball with RTTY.

The transmitter you are thinking about to complete the S-line was the
32S-1/2/3. I think most of the military/MARS stations used KWM2A
transceivers. The one with the crystal switch adjacent to the band switch.
I am quite familiar with them all. Still a good station for ssb.

3632. WANTED: Bearcat III / IV Scanner Crystals (USED)

Newsgroup: rec.radio.cb
Date: 2002-10-30 21:44:59 UTC
From: "Buford T. Justice" <BTJustice@gmx.net.no.spam>
Message-ID: <tpYv9.76$CR7c.26607692@news2.randori.com>
Source record: 142412
Cross-posted to: alt.radio.scanner,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.swap

I have been DESPERATELY looking for 10.8 IF crystals for my Bearcat III scanner. I need the following listening frequencies...

155.415
153.980
157.450
155.340
155.055
39.500
162.400
159.210
453.250

I suppose 10.7 IF crystals would work in it if I used...

155.315
153.880
157.350
155.240
154.955
39.600
162.300
159.110
453.150

I would either like to trade 1 for 1 with crystals I have now that I cannot use in my area or buy cheaply.

Sincerely,
BTJustice

Absolutely right, there is nothing truck-related in those sound bytes.
Just for grins, listened to conversations on channel 19 for a while.
Can you believe it, no one said anything truck-related there, either!
Hmmm. I guess that means truckers don't use radios :)

I use Outlook Express. You can create just about any message rule you want. Sort by E-mail address, words in the subject line, the from "who" name displayed, etc. Stick them in to separate folders, including the DELETE folder. You never even see the junk show up, and the spam gets deleted when you quit OE automatically.

Suspected N.J. Gang Members Arrested

.c The Associated Press

NEWARK, N.J. (AP) - Forty-one people identified as members of the Latin Kings street gang were arrested Wednesday on charges that included attempted murder and drug distribution, authorities said.

The gang operates in suburban New Jersey and recruited members at high schools in New York, Pennsylvania and Illinois, said Peter C. Harvey, a state attorney general.

Authorities said they confiscated 19 stolen vehicles, 26 pounds of cocaine, handguns and three assault rifles. They described the gang as well-organized and extremely violent.

The Latin Kings ``represent the new organized crime in the state of New Jersey, U.S. Attorney Chris Christie said.

The real question is why are you NOT educating them? Hams on this news group have been very open about how the are trying to solve the problem. Either by educating the violators, sending off letters to our congress person, the ARRL and RH at the FCC. The only thing you seem to be doing is a good imitation of an ostrich, complete with your head in the sand and denying there is any problem at all. For all any of the Hams on this news group know one of those voices heard on 10m AM could be yours!

The crux of it again.......most of that I can agree on. But how does, say, a freebander (26 to 27.995, for the sake of argument) have anything more to do with you than the party pirate at say,,,oh,,,,,86.9 FM?

>
Not sure I follow. I'm not really interested in the "freebanders" so long as they don't
alight on one or 2 of those 26 MHZ frequencies. Right now, I am just after the people
that are on the ham bands. (BTW, I am awaiting a reply from Greg Walden now).
Jerry

And the pirate CBers claim NOBODY is on 10m illegally. Hum.... the last I checked anything between 28000 KHz and 29700 KHz was the Ham 10m band. Sounds to me like the FCC can get a good two-for-one deal. Bust the bozos buying the amps, AND bust them for being on the Ham bands too. Not bad.

Seems like a reasonable estimate to me. Can you prove otherwise?

And I'm still waiting for your butt-buddy Aanal Aaron to prove that
I'm somehow "Steve", especially in light of your statement that you
know I'm not "Steve".

"I don't have to prove anything; I just say it and that makes it
true." Aanal Aaron H. Voobner (and lackies, including Georgie-girl
Busch WA3MOJ in Allentown, PA and others).

Channel 17 is used up and down the West Coast of the USA, not just
around Modesto. Cross-country truckers mainly use channel 19. I'm sure
there are local/regional variations elsewhere, too.

> > Thoughts?

The original "gentleman's agreement" (long since ignored by most CBers) was LSB on 16 and 30 thru 40, the rest were for AM users. I have no idea where it came from or who promoted it, but that's what I heard when I got into CB many years ago.

But Georgie-girl; that makes it an "illegal" CB amp, doesn't it? Which
side are you on? Of course, even Aanal Aaron H. Voobner encouraged a
guy to get his new amplifier modified for CB, so I guess we already
know that, don't we?Youse guys are on the side that causes flame-wars.

BTW, how many Cbers do you think actually read this newsgroup? Is it
worth your time (or Aanal Aaron's) to troll here? The question needs
only be asked.

>
> Au contraire, his proof is as good as your proof, prove he is wrong Ill bet
> you can't .

He hasn't proven anything. He's been proven WRONG every time he's said
anything, and never answered a single legitimate question that was put
to him. That's why he chose to run away and hide like a beaten puppy.
He never did prove that I was somehow "Steve", like he said he would
"Gladly" do. You might tell your buddy to put up or shut up. Gee,
maybe he chose to shut up? Ya think?

Notice it says "suspected". everyone is inncoent until proven Guilty.

Also... for every one that's arrested, there's 100 more they missed.

and those guys are REALLY big in Chi-town... they own the police out there... they've got ties to organized crime...(aka the Mafia)

Glad to see the'te getting those guys...

The Latin Counts here in Detroit.... (who branched off from the kings...) have all but gotten out of the gang banging business. the gnags found out they'd live longer and get along better if they helped ether other sell drugs.

either way, they still do thier thing.

-Me

On 30 Oct 2002 23:08:57 GMT, tra1n@aol.commmmmm (TRA1N) was blabbling:

...Suspected N.J. Gang Members Arrested
...
....c The Associated Press
...
...NEWARK, N.J. (AP) - Forty-one people identified as members of the Latin Kings
...street gang were arrested Wednesday on charges that included attempted murder
...and drug distribution, authorities said.
...
...The gang operates in suburban New Jersey and recruited members at high schools
...in New York, Pennsylvania and Illinois, said Peter C. Harvey, a state attorney
...general.
...
...Authorities said they confiscated 19 stolen vehicles, 26 pounds of cocaine,
...handguns and three assault rifles. They described the gang as well-organized
...and extremely violent.
...
...The Latin Kings ``represent the new organized crime in the state of New Jersey,
...U.S. Attorney Chris Christie said.

Anyone can sit and listen to the conversations any day and quickly figure
out that they are drivers.
"Whut's yer twenny thar, DRIVAH"? "AH tan fer thar, DRIVAH. AH just topped
the hill at MP
21 with 34,000 pounds thar, DRIVAH" And I can go up the road a-ways to a
Pilot Travel Center,
visit the CB radio case and find all the Galaxy and Connex 'reddios' I want,
and it doesn't take
rocket science to figure out who these illegal rigs are aimed at. Truck
stops? Truck drivers? Ten
Meter radios in the case? Now WHO would be most likely to visit a truck
stop?
It makes no difference. Since Mr. Walden (WB7COE) was appointed to the
House Sub-com-
mittee on Communications (chaired by Billy Tauzin), letters have been
a-flying. Mr Tauzin has been
made aware of the illegals, complaints are being heard, and something WILL
be done. It is a shame that a few selfish ones ignore the laws in place to
protect ALL users of radio and, in the pro-
cess, will likely bring down hardship on legal CBers as well. If you don't
believe that ham radio has
a lot of support in Congress right now, type in "Greg Walden" in your search
engine and see how

many sponsors various bills favorable to ham radio have garnered. It is not inconceivable that that
favorable image Amateur Radio has will go a long way to garner additional support for laws pro-
tecting Amateur Radio frequencies from incursion by illegal operators as well as commercial interests.

> mechanism in place that requires them to learn the rules and regs.

It probably happens a lot more than you or I would suppose. Say some
1st-timer buys a brand new CB, gets it out of the box, and only reads
the part of the manual which describes how to hook it up... and he
reads NOTHING about the safety guidelines (e.g., stay away from power
lines, etc.) or the Ten Commandments---oops, I mean Part 95.
>
> Why not require cb users to complete a basic RF safety/regulation course
> before allowing them to operate their radios?

A number of reasons:
1. Require any such course, and CB would essentially cease to be
license-free. People would then be more likely to lose interest in
CBs.

2. There are always going to be feebs who get into the bathtub and
then play with the radio. Pretty stupid to be sure, but there's just
about zero chance of eliminating the chances of that happening.

3. What would happen if our course-trained CB operator sold or gave a
CB to someone who hadn't taken the course? This is already a big
problem with ham equipment & guns.

4. It would hardly stop those who were deadset on "getting inside" and
then tearing up the turf once they did (a la the hams who trashed
3.985 & 14.3125 a couple years ago). Sure, I could have upgraded to
General and joined the fray, provided I had some bizarre desire to do
so---but my point is, the only reasonably effective way to keep the
chuckleheads from getting on the air at all is to psychologically
profile them when they apply for licenses. I forget what country did
this with guns (musta been New Zealand), but the way it works there
is, if you're crazy, no gun for you. It should work for radio
licensing as well.

> I know there will always be some hams and cber's who will, for whatever
> reason, deliberately violate the law and there is not much we can do about
> them. However, that doesn't mean that proactive steps can't be taken.

As far as safety is concerned, I'm all for it. One CBer, ham, or SWL
who becomes the next Ted Bundy because he tried to put up an antenna

too close to power lines, is one too many.

To get up on a soapbox, I think stuff like throwing dead carriers, threatening harm, & hogging freqs during life-or-death disasters, THAT stuff should be illegal... however (and Cole Porter & Steve Allen would kick my butt for saying so) I cannot, TO SAVE MY BLOODY SOUL, find a SINGLE REASON why we cannot say words like "fuck" or "shit" on the airwaves (though it admittedly WOULD diminish the insult value of these words), use linears, or transmit music... but whadd'ya expect, I'm psychotic anyways. >;-P

>
BZZZZZ!!!!! Wrong-o! We're not very pissed about it at all... frankly, we don't care *what* happens to certain freq ranges, because their propagation characteristics are inherently crummy. 11m, 49mhz, and 300mhz are 3 such ranges which come to mind... they are never going to be useful for much besides short-range communication, regardless of how nice & state-of-the-art the radios were.

> I have never run across an ham that was upset over the loss of 11
> meters.

I certainly never got upset over it... hell, even when we lost 220-222mhz, I think it served us right... the loss of 5.6ghz, now THAT was a shame.

Guy

...Exactly the same point I tried to make elsewhere in this thread,
about why 11m, 49mhz, & 300mhz are never going to be in demand as ham
bands, no matter how nice the radios for those bands. The 1st 2 sound
like sandpaper & the Army can keep the 3rd...

Sadly, it looks like what Twisty is defending is---an antisocial's
right to "sheepdip" himself through law school and get a lawyer
license. But, how do we screen 'em??? :-(

Some of us were (*ahem*) SWLs or scanner listeners for years before we
got into CB or made the decision to become hams. Maybe a lot of the
"out of the closet" type posters to the group are SWLs as well.

<RANT>
Um, one of them shows a peak wattage of 42,000 watts. Mmm kay.

2100 amps? Hmmm. Mobile? Hmmm again.

If you're going to hock a product that runs $13,000, you might consider
putting up a site that looks more professional. If someone has that kind
of money to spend, what makes you think that they will spend it with you?
You won't even cough up $8.95 to register a domain. Your email address in
the mailto: link is nonameamps@aol.com. That's reassuring.

Take the money you would othewise spend on building your illegal amp
inventory, and hire a damn web developer. You've got all of this tuff guy
stuff on your web site, but you chose a light purple (9900FF, to be
exact) bckground. What's up with that?
</RANT>

Sheesh.

Good luck with all of that

You don't know the half of it, Alan. Nonameamps runs (or at least used
to run) from the property of a decorated war veteran -- a Brigadier
General no less! And just a few miles from downtown Washington D.C.!

4000 "bird watts" and 5000 watts peak, now there's something to
consider...

Whoops, my mistake: Unless the business moved, the property is owned
by William H. Abendroth III, son of the late Major General William H.
Abendroth, United States Army. It's one thing to blatantly violate the
law, but it's another to abuse the freedoms fought for by your own

direct descendants, and on the back porch of the capitol no less!

Body handling: HTML body converted to readable text

No biggus,

Garry and I do everything for nothing but satisfaction, but we use all free and sponsored services. so we can provide a large amount of information which you can get for free.

Though sponsors are for reference.
www.dot.com.au who are currently arranging a Dial Up Connection for us in but they are also my (mike) preferred ISP because as a customer they have a plan which is brilliant and is a good service.
$34.95 P/M unlimited Download.420hours,10hr sessions* Regional $29.95 Metro and includes
50meg of web space.
www.tuscanblue.com They have quite freely arranged some webspace for storing of files
and we thank them for that service without them we would be unable to provide all the soundbytes.
www.newcastleprosound.com.au who have offered discounts to readers of Newcastle Scan and allowed some product reviews of new equipment. We have had dealings with peter for many years and in Newcastle there is no where else we can recommend for equipment.
Lawrence Security. Suppliers of quality security products and weapons
mlaws@kooee.com.au has supplied some embroided clothing to promote Newcastle Scan Locally and at emergency scenes.

free services
www.tripod.com
www.bravenet.com
www.webshots.com
www.yahoo.com
www.microsoft.com (media encoder software)

Currently there are 54 pages,we photographed more than 500 pictures, have more than 73 Soundbyte recordings published available on the web (66.8Megs worth) spent countless hours working on the site plus replying to email. SMSs, programming scanners via Messenger and ICQ and driving around to scenes and doing research.so if anyone would like to contribute all we are asking for is NOT CASH but sign our guest book out of 9800+ visitors only a few kind people bothered, How many? 112 out 9800, but we do get plenty of regular email asking questions etc. so im sorry if the pop ups annoy you but I think that's the cost to you for keeping it free for us.

Oh and heaps more to come. Suggest to us what you would like to see on the site and well see if it can be done.

To be put in the next few hours a police call sign allocation list, which is a state-wide list.
it will be added to the police page

Oh all this has been done in 10 months not a bad effort for a hobby

cheers
Mike
and Garry

PS If we did get paid for this life would be excellent.

Hey there Georgie-girl, still trying to stir things up? Ya know, I
have no problem whatsoever with Jerry Ox; he seems intelligent, he has
credibility, and he doesn't stoop to slinging bovine excrement,
flaming, and changing nics every other post, like you do. He has a
point and he states it. I can respect that.

You, your buddy Aanal Aaron, and a few others are just the opposite;
lame, anonymous cowards and trolls. You're the ones so concerned about
the Rules and Regulations, yet you continuously violate the Net and
Group TOS. Some example YOU set! Rules is rules; if you expect others
to opey them then you should, too. When someone (like Twist or Tim)
makes a valid point all you can do is make a snide one-liner retort
and redirect the question, ignoring the original post.

Indeed, your hypocrites infest an otherwise decent newsgroup and your
invective festers openly.

BTW, Georgie-girl: How many CBers do you think even know about the
UseNet and read this newsgroup? I think intelligent people would have
to say, Very Few. Now: What do you think you are accomplishing by
trolling here?

We're all on the edges of our respective chairs awaiting your reply.
Try to spell it correctly and make it more than a trite one-liner for
a change.

Well?

It's obvious, even to the keyclowns, that you have run out of arguments; so how about answering some of the questions you have been stalling to answer? Seriously, I really think that you don't know shit about amps, even "classic" grounded-grid amplifiers, and you are just trying to BS your way out of this challenge. With all your vague comments and weak redirections, it doesn't look like you know shit! So come on, Skippy, tell us what a "classic" design entails, or how a "properly designed" grounded-grid amplifier works? Maybe you can even explain how a triode-configured pentode DOESN'T work like a triode, even though it's clearly designed as a triode. Or maybe you can explain why Swan added grid-current distortion precautions to the manuals (and ALC circuits to the radios) for their sweep-tube radios (that is, explain why they needed to do that if sweep tubes are so adept at RF amplification?). And you have yet to find a TV that uses a 6146 as a sweep tube, or a currently produced RF amplifier that's legal for use between 24 and 35 MHz.

So come on, Skippy, you aren't just full of bullshit, are you? Or maybe you are ready to admit that you really don't know shit about the amps that are so deserving of your approbation. Well, I don't think THAT's going to happen: more likely you are going to duck these questions with excuses such as, "your questions are stupid", or "you don't know shit", yet without providing any foundation or fact to support such conclusions. So go right ahead and ignore the fact that I have answered all YOUR questions yet you refuse to answer MINE. After all, the only people that care are the ones that will go through the archives and see who can defend their statements with technical facts. Of course, that won't be YOU, Skippy, when all you offer is subjective, undefined and unsupported terms such as "classic" and "properly designed". Yes, go ahead and ignore your own terminology, as well as my last post on this topic, as it will only serve to discredit your obvious bias in favor of poor RF engineering!

BTW, you STILL haven't answered the question, "Do you have a financial interest in the popularity of sweep-tube amplifiers"? So will that be a 'yes', a 'no', or a 'no comment'? I'm betting the latter.

One thing is for sure: the alternators can produce the power. Now where that power ends up ISN'T going to be determined solely by the amplifier. IOW, if you actually witnessed corona from the bumpers, we will not miss your presence while you are undergoing cataract surgery. And it's nice to know that you won't be able to reproduce! Maybe you should volunteer as the biological guinea-pig for those RF power demonstrations... wouldn't bother me one bit!

Here is the header from the last post from Mopehead to me.

Subject: Re: Has anyone considered this?
Date: 31 Oct 2002 02:39:32 GMT
From: Moparholic@hotmailnospam.com

His posting time is 02:39 GMT which would be 8:39 pm my time.
Notice his date is Oct 31, a day ahead. This was posted yesterday,
today is Oct. 31. Looks like he doesn't even know what day it is.

Here is the header from my response.

Subject: Re: Has anyone considered this?
Date: Wed, 30 Oct 2002 20:36:32 -0500
From: JJ <radiobuff0@mailcity.net>

My posting time is 20:36, that would be 8:36 my time. I don't see
where that is one hour off. It is currently 9:10 am my time. Did
someone fail to account for going off daylight savings time?
Anyway, everyone is a step ahead of mophead.

From: "crossfire" <noone@home.com>
Subject: Prices on radio stuff for sale
Date: Thursday, October 31, 2002 8:45 AM

Hello to All
I posted this stuff Yesterday in hopes of getting some reasonable offers ,
And some were. then some were a pretty good indication that some People have
way too much time on their hand's.
So I have done some research and decided to put what I consider reasonable
prices on this gear. I would also entertain a swap for some of this gear for
a hf rig . So here goes.

Heathkit HG-B10 VFO with
manual ----------$50.00
Heathkit DX60B transmitter with
manual ---------- $ 60.00
Drake R-4B receiver (vfo needs
calibrating)----------$140.00
These 3 pieces were a complete station at one time.
Swan astro 150 10-80 hf rig with pwr sply (radio does not
work) ----------$75.00
Kenwood TW-4000 dual band
mobile ----------$135.00
Kenwood TM-201 2meter mobile with te-64 tone
control---------- $65.00
Ameritron RCS-8V ant switch with
controller ----------$100.00
Dosy 4001 , 4000watt watt
meter ----------$60.00
Yaesu ft-1500m 2 meter mobile (been out box 1
week) ----------$115.00
2- New mc-320 d-10 4 mic elements in boxes with filter
material----------$20.00 each
Kenwood TS-120 works great on 20,40,80, but does not work other
bands --------$150.00.
Radio Shack uhf mini ht in box used 1
time ----------$60.00.

That's all folk's
73" and Thank You for looking

I asked this question of 100 people in front of the " Food4Less " supermarket.

Most thought CB was dead.

A few asked if I was gay.

One dropped some change into my gadget bag.

The police refused my question and told me to leave.

One man told me Smokey and the Bandit was the best movie ever.

The majority just looked at me and continued on

If you are implying that people, who
hold ham licenses, should be somehow
held to a higher moral standard than
the "common man", then that would
be faulty logic. A ham license is only
a "permit" to use radio, it is not a
"badge of morality".

"Twistedhed" <twistedhed@webtv.net> wrote in message
If you obeyed the rules you wouldn't have to worry about pulled ISP's.

>Oh so your saying some of you guys like >playing Newsgroup Cop twisty?

Not at all.
It is return fire that gets these clowns burnt. I am even on record a long time ago, as saying complaining to ISP's was wrong. Well, I was dead wrong about that. When certain cretins reduce themselves to going out of their way outside of this group to harass a poster that they attach a strong personal feeling or emotion to, it illustrates the severity of personal problems they carry. Reporting attempted hacks, viruses,, and unwanted email or spam is not only legal and a right, but the correct course of action to take, according to all ISP's. As you have been witness, it is extremely effective.

>These same people are telling Jerry to get a >life he is playing radio >cop

Not I.

>as well as aaron

"Aaron" is no longer. Your mention of him is the only grasp of life he has in this group. He showed how to invalidate oneself, perhaps better than any other.

>etc, yet these same people rat out people to
>isp's some with no success

I have had excellent success. I probably even have the last 6 or 7 emails from the
abuse domain to attest to such. If you wish, provide a valid email, not a free throwaway and I may share some of my joy.

>Ill also mention. come one twisty even you can >see the hypocrisy of >this.
>It is ok to break FCC laws but don't even think >about breaking isp aup/tos. too damn funny

Never claimed it was ok to break any law, George. Speaking only for myself, I never contacted a single ISP until I felt the clowns crossed the line between joking and malice.
Forging and spoofing can be a laugh, but when it is done with an intent of malice, it should be stopped. It is a cowardly personal attack done by one who has been soundly trounced and repudiated, one who can not

manage
self-control and has a low self-esteem.
When it became clear an intent to damage, malign, and espouse falsehoods was an agenda of the louses who could not intelligently debate a subject, the hypocrisy you speak of was born. For all the trash talking they did about amps and dx and freebanding, they were not only willing to break rules they saw fit concerning their ISP's, but several real laws pertaining to electronic libel. We have all been witness to it. The flattery, though, is endless and I do appreciate the notoriety on the air..after all, isn't that what most dxers want.....their number/handle called and remebered? <g>

Don't worry about that. From what I see, Tim has too much class to bang any of the women in your family.

Landshark's sig IS very confusing. He says being a bad citizen is fun
but apparently this only applies to breaking FCC rules, and only
extends to people he agrees with. Some kind of wierd double standard I
guess.

> on the NOT side of things.
> Jerry, do you know the phrase, ONE TRACK MIND?

I just happen to be the one posting, but I am not the only one urging
Congress to do something.
Whatever gets done about the 10 Meter issue won't be my fault or the faults
of any of the other
people who are complaining about this. It will be the faults of the sellers
and users of equipment that is already illegal to import or sell in this
country. Since those persons cannot abide by the restric-tions already in
place WRT this stuff, then they have only themselves to blame for any
enforcement
actions.

You speak pseudo-nobly about the concept of freedom. Freedom for whom? You
promote a kind of "freedom" where someone can yell "FIRE" in a crowded
theatre and cause a stampede of
frightened people. You want a kind of freedom on radio that, in its purest
form would render radio
mostly useless. You want CB ops to be able to run roughshod over every
other service who have
just as much right to reasonably use a radio as CBers. You would want them
to be able to run rid-
iculous amounts of power (some already do that) and blank out televisions
with impunity. While,
IMHO, the Local Enforcement law is ineffective, it was a direct result of
complaints of constituents
to their Representatives. Demonstrating that this has not worked, and
showing that the exemption given to truck drivers (WRT inspections at weigh
stations), it is now entirely possible that, yes, laws, funding, personnel
could be restored to FCC to abate the incursions onto the ham bands, or,
at least, PL106-521 could/will be amended to confront the problem.

The illegals have no one but themselves to blame.

Frank..! chill pill and wake up. I didn't write what your getting so
excited
about, but I' here now. So relax and check your reverse screen current.

> "properly designed" grounded-grid amplifier works? Maybe you can even
> explain how a triode-configured pentode DOESN'T work like a triode,
>

Sure, consider the properly designed, AB2 grounded grid "Cathode Driven
amplifier. The interposed screen grid acts as an electrostatic shield
between the grid and plate, with the consequence that the grid to plate
capacitance is reduced.... combined with Grid Shielding between the
cathode and the plate which make your much touted neutralization
unnecessary.

Triode connected tetrodes (grounded grid) show a degree of improvement
in distortion figures as opposed to grid driven service.

What might be called more passive gain operation of the screen and
supressor grids in an AB2 amplifier, does not deny their actual operating

shielding function and reduced Cgp in the grounded grid circuit.

> even though it's clearly designed as a triode. Or maybe you can
> explain why Swan added grid-current distortion precautions to the
> manuals (and ALC circuits to the radios) for their sweep-tube radios

Pretty sly... but not sly enough. You jump around a lot and omit very
significant details...

First off, the topic was classic grounded grid rf amplifiers, in specific

AB2 operation. Now you want to jump over to a Swan Radio... tis not
the same Grounded grid animal Frankie... Oh, but you failed to mention

that.

Homey ain't playing your smoke screen game.

In short, all mfgrs used what they thought the most practical part and
circuit
trade offs... which probably included many short cuts... You claim to be
a big time
broadcaster type... ever seen a station take shortcuts..?

The Swan Radios are not grounded grid circuits... as we have been taking
here. But you want to interchange sidebar off topic circuits.... Nope,
"wouldn't be prudent at this conjecture.."

ALC is bad news for most all radios... dated technology that really
didn't
/ doesn't work well for the most part. Another topic thread please...

> (that is, explain why they needed to do that if sweep tubes are so
> adept at RF amplification?). And you have yet to find a TV that uses a
> 6146 as a sweep tube, or a currently produced RF amplifier that's
> legal for use between 24 and 35 MHz.

Because they work pretty well in the intended application... what part
of denial do you live in..? I probably won't find a TV set with a 6146
on
board... but you boat doesn't float unless you go back to that repost
over and over.... like I should reprint your multiple "grid tied to the
plate"
posts over and over. Hey, what text I reposted would probably work....
what you directly posted would fail every time... big time tube failures
cost money.

So I made a few inquiries... turns out I can't find very many current
FCC certified Amp mfgrs and no current certified amplifier builders
for 24-35 Mhz applications. Not a cost effective place to be these
days... HF & VHF Amplifier production in general is down...

But pre ban amplifiers are still legal and available on the
used market. There is no significant circuit difference from the
mentioned
35-54Mhz TPL amplifiers I provided Ebay Auction examples of; and
their pre ban cousins. Nothing wrong with a legal used pre ban
amplifier.

> So come on, Skippy, you aren't just full of bullshit, are you? Or
> maybe you are ready to admit that you really don't know shit about the

> amps that are so deserving of your approbation. Well, I don't think

> subjective, undefined and unsupported terms such as "classic" and
> "properly designed". Yes, go ahead and ignore your own terminology, as
> well as my last post on this topic, as it will only serve to discredit
> your obvious bias in favor of poor RF engineering!

Wow Frankie' you sure hit the low bar language toilet... a clear sign
that you are on shaky ground... One might conclude that all the
mfgrs who made sweep tube amplifiers, the many handbook projects
and similar practical easy to construct rf AB2 g-g circuits contradict
you. Of course, you are right, they are all wrong...

>
> BTW, you STILL haven't answered the question, "Do you have a financial
> interest in the popularity of sweep-tube amplifiers"? So will that be
> a 'yes', a 'no', or a 'no comment'? I'm betting the latter.

Your news reading program a bit whacked Frankie..? I answered
quite some time ago. Now explain to us why a yes or no answer would
make any difference...

YUP! Makes it even easier since what one WILL hear will be local. Easier
to nail.
That "feel good" law might be 1) an amendment to PL106-521 to allow for
state DOT
officers inspect trucks for illegal radios, 2) increased funding to FCC to
hire additional
agents to do the same and/or visit truck stops and CB shops to seize such
radios, 3) alert
major trucking companies that they will be held responsible for any illegal
equipment found
in their fleets which allows their own managers to issue directives against
them and inspect
the trucks for non-certified radios. ......among other things. Just for
grins, you ought to visit
Greg Walden's website and view the number of pro-ham radio bills AND the
numbers of spon-
sors such bills have attracted. Don't make the mistake of thinking that
this issue will be passed
over with an ineffective, "feel-good" law.

of action to take, according to all ISP's. As you have been witness, it is
extremely effective.

Well twisty I have never sent anyone a virus, I have never ever sent anyone
from this group email, and I certainly haven't tried to hack anyone,

I also think your missing the point. Twisty many from this group who have
said they are illegal operator yell and scream at Jerry and others who are
against illegal cb operation telling them to get a life doesn't he have
anything better to do then play FCC cop well Twisty, I say the same thing
don't these guys have anything better to do with there life? They complain
that *we* are complaining about them being Illegal yet they turn around and
do the same thing and try to play NetCop. funny thing is twisty you have
tried, Landwhale has tried, Moped has tried to terminate my ISP, and what
keeps happening ? Nothing they laugh at the complaints, they are frivolous
complaints as i said twisty I have never sent anyone e mail or had any
contact with anyone other than thru this NG. So what is there excuse?

>These same people are telling Jerry to get a >life he is playing radio
>cop

Not I.

>as well as aaron

"Aaron" is no longer. Your mention of him is the only grasp of life he
has in this group. He showed how to invalidate oneself, perhaps better
than any other.

>etc, yet these same people rat out people to
>isp's some with no success

I have had excellent success. I probably even have the last 6 or 7
emails from the
abuse domain to attest to such. If you wish, provide a valid email, not
a free throwaway and I may share some of my joy.

>Ill also mention. come one twisty even you can >see the hypocrisy of >this.
>It is ok to break FCC laws but don't even think >about breaking isp aup/tos. too damn funny

Never claimed it was ok to break any law, George. Speaking only for myself, I never contacted a single ISP until I felt the clowns crossed the line between joking and malice.
Forging and spoofing can be a laugh, but when it is done with an intent of malice, it should be stopped. It is a cowardly personal attack done by one who has been soundly trounced and repudiated, one who can not manage
self-control and has a low self-esteem.
When it became clear an intent to damage, malign, and espouse falsehoods was an agenda of the louses who could not intelligently debate a subject, the hypocrisy you speak of was born. For all the trash talking they did about amps and dx and freebanding, they were not only willing to break rules they saw fit concerning their ISP's, but several real laws pertaining to electronic libel. We have all been witness to it. The flattery, though, is endless and I do appreciate the notoriety on the air..after all, isn't that what most dxers want.....their number/handle called and remebered? <g>

From: richardcranus@hotmail.com (Richard Cranus)
"Twistedhed" <twistedhed@webtv.net> wrote in message
>Oh so your saying some of you guys like >playing Newsgroup Cop twisty?

Not at all. It is return fire that gets these clowns burnt. I am even on record a long time ago, as saying complaining to ISP's was wrong. Well, I
was dead wrong about that. When certain cretins reduce themselves to going out of their way outside of this group to harass a poster that they attach a strong personal feeling or emotion to, it illustrates the severity of personal problems they carry. Reporting attempted hacks, viruses,, and unwanted email or spam is not only legal and a right, but the correct course of action to take, according to all ISP's. As you have been witness, it is extremely effective.

>Well twisty I have never sent anyone a virus, I >have never ever sent anyone from this group >email, and I certainly haven't tried to hack >anyone,

And I certainly never claimed some of the things attributed to JerryO you said were made.

>I also think your missing the point. Twisty >many from this group who have said they are >illegal operator yell and scream at Jerry and >others who are against illegal cb operation >telling them to get a life doesn't he have >anything better to do then play FCC cop well >Twisty, I say the same thing don't these guys >have anything better to do with there life?

Well, the same answer you gave me is just as valid coming from me on this point...I didn't say those things.

>They complain that *we* are complaining >about them being Illegal yet they turn around >and do the same thing and try to play NetCop.

No. As stated, it is all return fire.
If the hypocrites crying the most about "netcops" would obey rules themselves, there would be no need of them to worry about "netcops".

>funny thing is twisty you have tried,

Wrong. Once again, as is with reality in the media, the burden of proof is on the claimant, (the newspaper, broadcaster, reporter, writer, etc.) which in this case, happens to be you. If you lost an ISP for screwing around, it is possible your claim is true.....if you did not lose an ISP...again, show me the money, 'cause it doesn't exist......one thing that remains constant among your crowd......many bum claims that you

guys throw out there hoping one will somehow stick.

>Landwhale has tried, Moped has tried to >terminate my ISP, and what keeps happening >Nothing they laugh at the complaints, they are >frivolous complaints as i said twisty I have >never sent anyone e mail or had any contact >with anyone other than thru this NG. So what >is there excuse?

Asking me makes as much sense as asking Lelnad why he claimed he had me tossed from webtv. I knew if I remained quiet long enough he would babble on and make such statements for us to reflect upon and enjoy.......you can see "arron" practicing this patented "twist" move as we speak, only not from voobner@yahoo,,,that ones really gone...oh, and the ones sharkie had yanked for harassment. It's real simple..debate intelligently or not at all...or at least hold your temper. Ever mindful of the irony of the question that continues to haunt several angry hammies, it must be posed again....why is the art of communication lost on some of those who are supposedly licensed for it?

HI JAY, THANKS for the reply!!
It is a collectors item, although
It does have other uses.
There was another rather rude comment from some "cheesy" guy
who "just don't get it".
I think he is looking for a $5000 IFR (if he knows what an IFR is?)
for $30 bucks.
Oh well, can't please everybody.

Take care!!
Mark

Nope, propagation is fine. It's just that very few people use CB's here for some reason. You can see a lot of CB antennas on cars & trucks, and even a few CB base antennas at people's houses, but if you scan the CB band there is very little activity except for the truckers on 19.

Tom

Can't the same then be said for the Hams and other Cbers who are against
illegal CBing and breaking FCC rules. If they kept their noses clean perhap
you wouldn't have to hear aaron preach , or jerry tell how many times he
called riley this week. 10-4?

>funny thing is twisty you have tried,

Wrong. Once again, as is with reality in the media, the burden of proof
is on the claimant, (the newspaper, broadcaster, reporter, writer, etc.)
which in this case, happens to be you.

Twisty Oh it is true, remember the one when you emailed @home and said
something about a copyright on your Sporadic Waves article?

If you lost an ISP for screwing
around, it is possible your claim is true.....if you did not lose an
ISP...again, show me the money, 'cause it doesn't exist......

No twisty didn't lose any Isp's went from @home to comcast, when @home went
belly up.
No I didn't say I lost an Isp, I said you were also one who has sent letters
to peoples ISP's, hence when you sent one to @home. Does that jog the ole
mammory

one thing
that remains constant among your crowd......many bum claims that you
guys throw out there hoping one will somehow stick.

Twisty, I am part of no crowd, I run alone my fly fishing friend, so please
don't throw around accusations which you cannot prove, now what i told you
in this thread is absolutly true you know it and i know it. I have never
turned anyone in to the FCC, or anyone else for that matter. I may not like
what the keyclowns are doing to the Band and the intruding on 10 meters and
make it know in this NG. But, I can assure you letter will be sent to local
leo's, and the FCC re: certain individuals and how they are bleeding over,
running hi power, bothering the neighbors etc. Ya know what It might not do
a damn thing but ya know what what if it does. The way i figure it one good
shake deserves another. whadda ya think! hell it might get my rocks off,
just like when these bozos complain to Isp's lol. Ok Ill be back i gotta
type some letters.

-G-
